To Whom It May Concern

I was elk hunting in the Big Hole area about 25 miles south of Anaconda, Montana, and about 2 miles west of the Big Hole River.
I shot a calf elk and brought him home and was cooking some steaks of this elk.
The cooking did not smell good
I took some of this elk meat to the Fish and Game here in Great Falls. They didn't want to mess with it.
I took it to the Great Falls Veterinary Service, they sent it into Bozeman for analyses.
A few days latter they called to come read the results.
See the enclosed material.

Joe Wirak

The Arsenic came from the Smelter in Anaconda, Mont.

Dear Mr. Wirak,

The Lab. finding on the Elk meat that we submitted on your behalf indicated a definite metal toxicosis. Specifically , the Lab found arsenic in levels ranging between 3 and 5 parts per million.

The Lab. personell agree with us that this level of arsenic in the meat would render the meat unfit for human consumption.

Yours truly,
Gt. Falls Vet. Serv.
by [illegible], DVM
