Based on the data entered into MASTS, the following is an overview by Area Agency of the percentage of clients with an identified risk factor who were served during FFY 2010. Risk factors are areas that have been statistically proven to increase an elder's chances of being institutionalized. The major risk factors that AoA focuses on are:

- Living alone
- Living in poverty
- Minority status
- Clients that have 3 or more identified Activities of Daily Living (ADLs) that they need assistance with
- Clients that have 3 or more identified Instrumental Activities of Daily Living (IADLs) that they need assistance with
- Clients who are at nutritional risk based on a score of over 5 on the NSI screening tool
- Clients living in rural areas (as defined by the US Census)

% OF PARTICIPANTS WHO HAVE RISK FACTORS BY AAA/STATEWIDE

AAA	Living alone	Females alone	Males Alone	Minority	Living in poverty	At Risk ADL>2	At Risk IADL>2	HDM NSI at risk	Cong NSI at risk	Rural
1	55.0%	60.1%	44.7%	11.7%	35.2%	8.2%	31.6%	46.8%	12.8%	58.1%
