| Wyoming | 19 years of age | Influenza, Pneumonia, Td, Tdap, MMR, Varicella, Hepatitis A & B, Meningitis, HPV, and Zoster | | Yes | No |

*The ACIP off-label (non FDA approved use) of Tdap:

Tdap vaccines are only FDA approved for patients ages 10 years and above. The ACIP now recommends that children age 7-10 years old who have not completed their 5 dose primary series of DTaP. Pharmacists are required by state to obtain a patient specific prescription for all patients ages 7-10 years old (where allowed by state privilege), to provide Tdap vaccinations based on ACIP recommendations.

*North Dakota is not included on this list as the information was not available at the time this chart was compiled

Depending on the state, pharmacists may be able to provide immunizations with/under:

1. Prescriptive authority
2. Standing order approved by a physician licensed within that state
3. Patient specific prescription
