

# Vote NO On HB 104

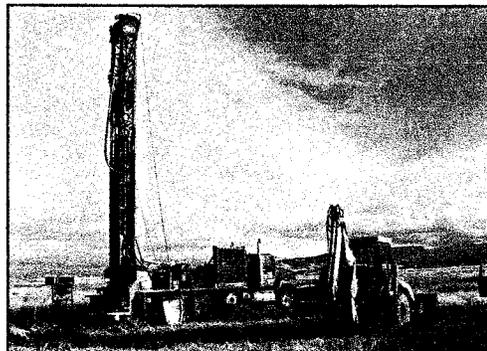

Flowing Well

## Abundant Groundwater

1. Montana is presently utilizing less than 2% of the underground water that is available in Montana's Aquifers.
2. Domestic wells do not consume water. 95 - 98% of pumped ground water is returned to the ground at the site.
3. The present law is 35 gpm and 10 acre ft. One acre ft is 6 gpm.
4. To enforce this bill would require water police, water meters, etc. This bill is not needed & difficult to enforce.
