

EXHIBIT 13  
DATE 1/26/2011  
HB 227

1/26/2011

Dear Member of the Committee,

My name is Dr. Anthony Lambert, D.C. I am writing this letter in response to many of my clients at my chiropractic office in Missoula, MT. I have heard many hardship stories over the past 5 years and felt there was a need to express my opinion on HB 227.

I believe no child should be forcibly vaccinated with a product that can cause serious health complications. Physicians and government officials must be willing to have open and honest discussions about the risks of vaccination along with the benefits. Denying these risks destroys the doctor-patient relationship. Families have the right to know the risk of what is being injected into their body and into the body of their children. Doctors have a responsibility to be forthcoming about known side effects. The choice between the risk of the disease and the risks of the vaccines should be a decision between the doctor and the patient, and not a mandate from an appointed politician or bureaucrat.

All I ask is that all non-vaccinated children be allowed the same services and education that all vaccinated children are permitted. You can allow this by supporting HB 227.

Sincerely,

Dr. Anthony Lambert, D.C.
