MVR Financial Need Waiver

Financial need may not be used as a condition for furnishing any vocational rehabilitation service if the individual in need of the service has been determined eligible for Social Security benefits under Titles II or XVI of the Social Security Act. CFR 361.54 (2)(G)(ii)

I am currently receiving benefits from Social Security. I understand:

- Nothing in this policy shall be construed to create an entitlement to any vocational rehabilitation service;
- My counselor may need to make inquiries regarding my financial assets for the purpose of determining my ability to successfully complete my vocational rehabilitation program;
- I must work with my counselor to seek, secure and use other benefits and services from similar programs in arranging my vocational rehabilitation program .
- Should my status as a recipient of benefits from Social Security change, it is my responsibility to inform my counselor of that change.
- While financial need may not be used as a condition for furnishing any vocational rehabilitation service, I may choose to participate in the costs of my program as a contribution to the effort to extend the financial capacity of MVR to serve persons with disabilities.

EXECUTIVE SUMMARY

My name is Doug Amsden. I am a Montana native who lives with a traumatic brain injury (TBI) disability sustained in a 1979 automobile accident. I offer a unique proposal on disabled rehabilitation program services/manufacturing investment measures for your consideration. If approved, I firmly believe this project would greatly reduce an ongoing financial burden facing our state's economy, while at the same time improving the lives of my fellow Montanans living with a brain injury. I should note here that Montana currently ranks second in the nation for per capita incidence of TBI behind our neighboring state of Wyoming which ranks first. On these facts there is a large number of unnecessarily dependent families who are economically and emotionally impacted by the negative consequences that naturally occur from this single permanent disability. The project with research and development in rehabilitation industry employment opportunities that I offer is intended to empower many similar disabled people who live handicapped by a limited social security disability income. I firmly believe by experience that the public participation to organize my rehabilitation services product will assist this underserved population to move from a position of economic dependence in their community to that of becoming a productive and respected tax paying member of Montana's work force. This economic program policy initiative on articulation standards with rehabilitation resource disclosures will process a TBI disabled recipients' exclusive work interests to become a successful, independent and productive Montana citizen.

Doug, Not-For-Profit, 2011

**3N Technologies
Not-For-Profit**

Despite my spending years attempting to participate as a responsible consumer of Montana Vocational Rehabilitation (MVR) program services, I have been unable to achieve the vocational outcomes that I set out to accomplish. Though MVR agency services work well for many physically disabled consumers, they do not work well to address the existing employment information on record within a TBI disabled case. While I acknowledge that the official assessment needs on individual rehabilitation service in each TBI case presents itself differently. I have produced credible information to develop my job growth goals and improve my economic living standard. Rather than accepting a disheartening and impoverished future, I propose economic compensation provisions within a 3N Technologies rehabilitation services business plan, the interpretation upon economic and education resource provisions in Public Law whereby a TBI disabled consumer who has credible job skills for production in record will be educationally assessed, placed, and then job trained to produce in a plastic industry employment position of their individual choice.

Once this Not-For-Profit rehabilitation program proposal is approved, this 3N Technologies commercial business structure will be licensed to generate employment development options for investment. This 3N

Doug, Not-For-Profit, 2011

**3N Technologies
Not-For-Profit**

Technologies investment venture is authorized to conduct business on a Rehabilitation program efficiency model. Not-For-Profit program investment goals are modeled by the administration of alternative Rehabilitation service program tools and green technology, science, and energy byproducts for production.

The 3N Technologies business structure will utilize individual aptitude tests, etc. to compliment a TBI disabled consumer's individual choice to invest in the plastics manufacturing industry. A amendment allowing Rehabilitation services provisions in employment placement procedures parallel public tax-incentive service and pro labor production goals; collaborating HRM program work standards on rehabilitation services provisions serve plastics industry employment options. The proposed 3N Technologies Not-For-Profit business market structure hereby applies for a tax-exempt status. This business plan will manage governmental return-on-investment (ROI) tools for economic development. A Rehabilitation IT (information-technology) services delivery system policy initiative of this nature will modernize economic security, engineering, architecture, accountant, and business lawyer, etc. work operation goals.

The Not-For-Profit rehabilitation services program advocates justice by the implementation of a level-playing-field economic rewards system.

Doug, Not-For-Profit, 2011

**3N Technologies
Not-For-Profit**

The 3N Technologies budget will:

- 1.) Amend rehabilitation services program management discipline standard;
- 2.) Produce education principles to rehabilitate the consumers economic income need;
- 3.) Advocate TBI disabled applicant economic rights, liberties, and freedoms;
- 4.) Reassign undisciplined rehabilitation program personnel for inefficient and adverse industrial communications imposed;

3N Technologies advocates Intellectual Property rights and governs disabled individual education benefits belonging on a TBI applicant's Montana Constitution First Amendment Freedom of Expression rights. A license to market this commercial resource tool will further rectify the legal standing of substantial rights on a TBI consumer's Due process of law. This rehabilitation IT program source for production is designed upon the comprehension of practical information upon a TBI disabled applicant's industry production interests. The 3N Technologies rehabilitation services production philosophy is based on incorporation standards and will work via a Universal design to raise the underrepresented disabled population health, education, and welfare living standards.

The future contributions of collaborating members who contribute research and development (R&D) for TBI recipient compensation include: the Brain Injury Association of Montana (BIAM), Governor's Office of Economic Development, Montana Vocational Rehabilitation, Service Corp. Of Retired Executives (S.C.O.R.E.), Living Doug, Not-For-Profit, 2011

Not-For-Profit

Independently For Today and Tomorrow (LIFTT, Inc.), and Rural Institute on Disabilities with the University of Montana. This rehabilitation services program agenda is symbolized with a Biplane pulling a 3N Technologies banner business logo.

PERSONAL GOALS

Short term: My immediate market interest with technology resource provisions in Public Law on Not-For-Profit management operations is to be profitable within a brief period of time. On the market of four basic HRM program transaction initiatives: human, financial, physical, and structural. The 3N Technologies business plan will contribute directly to Montana job growth and economic development. A commercial business endeavor of this making on TBI disabled individual rehabilitation services issues is established by the added economic resource assistance of state government programs.

Property rights on information technology (IT) resource management provisions will process resource benefits so that I, too, can better function as a income earning and independent TBI disabled consumer.

Long term: My long term goal is to take the 3N Technologies business entity to a minimum 50 to 500 person American sales firm (by the use of networking with the world-wide web.) The organizational hiring of a technical transition management team will work to empower the rights of a disabled class to earn a sustainable income.

The industry service rule upon case management appraisal standards will constitute the founding of rehabilitation program transparency standards.
Doug, Not-For-Profit, 2011

3N Technologies
Not-For-Profit

MISSION

The 3N Technologies business mission will manage the process of commercial resource disclosures on the individual with a disability Montana Constitution First Amendment Freedom of Expression rights. The proposed rehabilitation services program management rule will assist the TBI disabled applicant in retaining his/her dignity, integrity, self-esteem and economic investment strength. The business tools on Education principles processed by management for class production will further modernize trilateral government, labor, and management program work standards.

PRODUCT DESCRIPTION

The 3N Technologies program commercial product is based on the official management issuance of rehabilitation education principles. Within a rehabilitation services assessment precedes a TBI individual production objective, case management advocacy procedures determine the TBI disabled applicants' commercial industry production outcome. The 3N Technologies business protocol generates the industry transfer and distribution of TBI disabled individual education tools for state job growth and domestic production.

PERSONNEL

The 3N Technologies organization will perform four basic program legal functions: planning, management, growth, and controlling. HRM leadership positions will be given to the qualified applicant who demonstrates the management of gainful industry technical skills, conceptualization skills, and interpersonal skill on rehabilitation program

Not-For-Profit**

management transformation endeavors. The initial screening of trained professional staff will be made by the contribution of coalition members who utilize the understanding of literal rehabilitation information-technology tools to build a prosperous state of Montana economy.

MARKETING

Billings, Montana has been experiencing an expanding economy and population growth for several years. As this tax base expands, capital outlay will be utilized for rehabilitation services production outcomes on: Job training positions; Software for equipment operations; Plastics Granulator for container size reduction; Plastics Separator to compartmentalize type of plastic product; and Film Scrap Reclaim Systems. The business will market this commercial program to the community with enthusiasm by competing for relevant bids in diverse target markets.

COMPETITION

Local competition for revenue, generated by the policy implementation of demographic rehabilitation program technology resource management standards in Montana, is non-existent regarding the political interests to materialize this underserved culture's rehabilitation program needs. The 3N Technologies commercial enterprise will manage alternative rehabilitation education resources for community economic development, which is tailored to meet the growing rehabilitation needs on employment and self-sufficiency of a TBI disabled consumer.

TRENDS

Billings, Montana was awarded All American City in 1992-93. This city is Montana's largest in population and most advantageous business location related to the market of efficient HRM standards to materialize the individual with a disability production interests. Combining the above trends upon the economic growth of Billings, MT in recent years, the certificate on gainful employment opportunities is timely. Perhaps the most promising trend in society is for a licensed information-technology management program to credit the TBI individual with a disability education skills in industry production prior to providing employment placement assistance. With the measure of economic Freedoms granted by the American's with Disabilities Act, Title II -- PUBLIC SERVICES, I, hereby, authorize Rehabilitation services credentials in commercial research and development, apply for a rehabilitation program subsidy from government programs to process public economic resource benefits. This program authorization on consensus issues in government funding will open many Y2K closed business doorways where not so long before there are only insurmountable market barriers. The 3N Technologies organization market of comprehensive information technology resource provisions will benefit this societies economic needs for community services to empower a TBI disabled consumers living standard and education, health, and welfare poverty status. This

proposed private/public rehabilitation program is disabled consumer friendly. A rehabilitation services program employment project that embodies the transfer of accommodations to empower a establishment of fundamental education principles.

Authentic Rehabilitation business planning strategies on commerce economic development issues will reconstitute government program policy service rules.

While manifesting economically efficient English language vocabulary skills and investing proficient civil rehabilitation grammar terms with public service production objectives, I will succeed, as this is a business environment that is built to accommodate processing my employment strengths on production, and it supports the manifestation of comprehensive technology services and device provisions by Public Law to develop and materialize these Montana plastic industry production goals.
