Re: Town of Belt DNRC RRGL and TSEP Grants

Mr. Chairman and Members of the Committee:

My name is Jean Fontana. I am the Clerk / Treasurer in Belt. Thank you for the opportunity to speak today on behalf of our water storage tank replacement project.

Belt is nestled in a little valley in Cascade County, 20 miles East of Great Falls and has a population of about 600 people. We are currently rated as the # 20 project on the DNRC list and are ranked below the fundable level in TSEP. We appreciate the efforts of the MDOC and DNRC staff in review of our applications, appreciate the DNRC ranking, and respectfully disagree with the TSEP ranking allotted our project.

Tank Conditions

As shown on the attached photographs, our concrete water tank is very near catastrophic failure and is unlikely to last another two years, leaving us critically short of fire protection and summer demand storage. MDOC staff ranked our application down because we did not included a "structural analyses" of the tank. We considered such a waste of money, money we felt was better spent on the replacement of the tank, as one look at the leaks, cracks, and exposed reinforcing bar tells everyone this tank has lived its economic life. *Please review the attached photographs taken last Friday of tank conditions.*

Public Health and Regulatory Concerns

The Montana Department of Environmental Quality is very familiar with our situation. They conducted a sanitary survey in April of 2010, *which is rapidly approaching* and found the tank to be "significantly deficient" and a probable cause of repetitive coliform contamination to the public drinking water system. MDEQ subsequently placed our town on a compliance schedule to replace this water tank by 2012. We are counting on TSEP funding to meet that compliance schedule. MDOC staff found no significant public health hazard associated with our project, and essentially disagreed with the expert evaluation of DEQ. DEQ holds all the cards, and places us in position to borrow extraordinary sum to comply with the mandated replacement schedule. *I have attached a copy of the DEQ compliance schedule to my testimony*

Financial Concerns

TSEP staff ranked our project lower because our proposed water rate of $31 per month will be "only" 108% of the MDOC target rate. This ranking does not take into account that we will soon face a significant sewer rate increase due to mandated improvements to our sewer lagoon. Our town is 57% low and moderate income people, and we cannot afford to take on more debt service than the $192,000 SRF loan proposed. If we are forced to borrow $ 692,000 (without a $500,000 TSEP grant) our water rates will skyrocket to about **$41 per month, or 139% of target rate**. We cannot afford this level of debt. We are currently paying on a $714,000 *USDA/RD loan* for previous Sewer Lagoon Improvements. We will admit that the local government has been fiscally conservative in it's utility rates, but the Town Council has been trying to keep utilities at an affordable rate for our 57% low to moderate income population, many or which are retired individuals living on extremely low fixed incomes.

Support for the Project

Our community, its leaders, and our legislators firmly support this project. See letters of support from ***Rep. Mike Milburn*** and ***Sen. Brad Hamlett,*** as well as from our school and local businesses.

Conclusion

We do not understand why TSEP staff recommended funding so many bridge projects. Forty percent (40%) of the proposed TSEP budget will go to fund county bridge projects, costs for which can be spread out over a much larger population with much lower financial impact than the cost of a an absolutely critical water project, under DEQ mandate, for a small town with a population of 57% low and moderate income people.

We do not feel we received a fair shake. Small local governments should not have to compete against larger cities, and county governments for funding.

We desperately need TSEP and RRGL funds to make this project work and to meet the DEQ mandated compliance schedule for tank replacement. We respectfully request that you move our project onto the funded list for TSEP, and rank it equal to the ranking it received from DNRC.

Although we applaud efforts to cut spending, we feel it should be made on a fair and equitable manner. Small local governments with limited revenue sources have no where else to go for help for our "big" projects, but to the various State Agencies.

Thank you for your time.

Re: **Town of Belt, (PWS ID MT0000138) Class C**
Ground Water Rule Significant Deficiency Corrective Action Schedule Approval

Dear Ms. Fontana:

On August 3, 2010 the Public Water Supply Section of the Department of Environmental Quality (DEQ) received the proposed corrective action schedule from the Town of Belt for addressing significant deficiencies by repairing and replacing the concrete storage tank and repairing the metal storage tank.

DEQ accepts the proposed schedule and will track three activities required by the Town of Belt under this compliance schedule;

1) Submittal of design plans and specifications to DEQ by January 1, 2012,
2) Completion of the Request for Bids for the construction by March 1, 2012, and
3) Completion of Construction by September 2012.

As short term corrective action the Town of Belt will;

1) Patch any existing unapproved openings on the concrete and metal storage tanks with caulk and /or mortar by November 19, 2010, and submit photographs of the repairs by December 1, 2010, and,
2) Inspect the storage tanks once a week until permanent repair/replacement of the tanks is completed.

Failure to meet these requirements will result in a violation pursuant to the Administrative Rules of Montana 17.38.211.

If you have any questions please contact me at 406-444-2691 or bhovda@mt.gov

Sincerely,

Betsy Hovda

Service Category Description ____

Comments: The system's wells are located in the flood plain and have flooded in the past. he wells are deep (379 and 440 feet) and have been classified as groundwater.

The system has sporadic coliform positive samples (usually fall and early spring). The sources have been sampled and found to be coliform negative. While the PWS assumes the tanks are "turning over" and that causes the problem – the presence of coliform bacteria may be due to the poor condition of the tanks (concrete tank in particular). If precipitation can run into the tank, it may wash dirt, bird droppings, etc. into the tank. The tanks and wells are routinely disinfected twice a year (early spring and fall).

The concrete tank has been determined to be a significant deficiency for this system and will require corrective action under the Ground Water Rule.

The town has hired an engineer and are seeking funding to make repairs. They also plan to raise rates to cover upgrades to the system. With those upgrades they are also proposing (in addition to addressing the tank issues) to meter the system and fence the tank location with security fencing.

SANITARY SURVEY FORM – WATER SYSTEM FACILITIES

Page 2 of _____

PWSID MT0000138 | SYSTEM NAME Belt, Town of

Water System Facilities (WSF) numbers are WSF Type Codes plus an assigned number. (i.e. source facility numbering starts with 002 and all non-source facilities start with 001). See instruction sheet for a list of WSF Type Codes. When a source is operational it is considered Active, this includes systems that are seasonal. Inactive sources are those which are shut down but can return to active status, such as a system out of business. Proposed sources are those that have been identified through the Plan Review process, but are not connected to the water system.

*A **water source facility** is a well, spring, intake, infiltration gallery or consecutive connections from which a system draws or purchases water:*

Comment:
Well is unvented. They could vent the well thru the plug on the side. Need to recaulk the sounding tube and gauge on the other side.

Since flapper valve on blow-off doesn't work, they have installed screen over it.

Both well houses have chlorination rooms built, just in case f.t. chlorination is required. Wells are located in the flood plain and have flooded in the past.

Explain Controls: pumps run on clocks - 2 hrs/day. This well is the back-up so they will run it every 34 days just to keep it from getting stagnant.

Comment: grease pumps annually

Disinfect the wells and storage tanks twice a year.

MONTANA WELL LOG REPORT

This well log reports the activities of a licensed Montana well driller, serves as the official record of work done within the borehole and casing, and describes the amount of water encountered. This report is complied electronically from the contents of the Ground-Water Information Center (GWIC) database for this site. Acquiring water rights is the well owner's responsibility and is NOT accomplished by the filing of this report.

Comment: Well is not vented. The air release valve and blowoff are screened. The flapper valve on the blow-off still doesn't work.

This well serves as the lead well or main well.

Wells are located in the flood plain and have flooded in the past.

Explain Controls: Pumps run on clock. They set the clocks for about 2 hours on each. Manually operate the well run times- each tank has a level indicator on the side, so driving by they can see the tank level. The steel one works sometimes, the concrete one doesn't work at all... .

Hope to have telemetry for well with new system improvements... once constructed.

Comment: grease once a year; knows vendors so if he needs parts he can easily get them.

MONTANA WELL LOG REPORT

This well log reports the activities of a licensed Montana well driller, serves as the official record of work done within the borehole and casing, and describes the amount of water encountered. This report is complied electronically from the contents of the Ground-Water Information Center (GWIC) database for this site. Acquiring water rights is the well owner's responsibility and is NOT accomplished by the filing of this report.

Date of last inspection By whom

This tank has serious structural issues. The concrete is spalling and rebar showing through. It has numerous leaks and the top is really in bad shape.

Overflow pipes (2) are screened but terminate high near the top of the tank The tank isn't being filled above the large leak about half way up the side.

Have hired an engineer and are planning to submit applications for funding.

The tank level indicator doesn't work.

STORAGE FACILITY

WSF ID ST002

Location: Description Steel tank

Latitude: 47.38072°

May 1996 Water Tower Paint and repair

Date of last inspection By whom

Comments:

Tank has a lot of sanded/painted spots on the lower third and some bullet holes in the top. The spots are attributed to bullets, but I don't know thats true. They are only on the lower third and are also on the back side by the bank which wouldn't be within sight of a person with a gun.... They may be due to pitting and corrosion.

Tank needs to be inspected and cleaned. This should be done before any plans are made to rehab it. The last operator stated the metal is thin from the sandblasting.

The tank level indicator sticks.

SANITARY SURVEY FORM - MISCELLANEOUS

PWSID **MT0000138** | SYSTEM NAME **Belt, Town of**

DISTRIBUTION SYSTEM EVALUATION

Distribution description Cast Iron pipe, and PVC mostly some AC by park

	Yes	No	Unk	N/A
System drawings available?	☒	☐	☐	☐
Accurate As-Built drawing(s) on-site?	☒	☐	☐	☐
Lines adequately sized?	☒	☐	☐	☐
Adequate pressure maintained?	☒	☐	☐	☐
Mains protected from freezing?	☒	☐	☐	☐
Distribution system free of leaks?	☒	☐	☐	☐
Asbestos concrete pipe used?	☒	☐	☐	☐
Fire hydrants?	☒	☐	☐	☐
Dead end lines minimized by looping mains?	☒	☐	☐	☐
Flushing program?	☒	☐	☐	☐
Pressure reducing stations? Number each home	☐	☐	☐	☐
Booster stations? Number____	☐	☒	☐	☐
Are individual booster pumps on any service lines? (see DEQ1 8.9.2)	☐	☒	☐	☐
Were cross connections observed?	☐	☐		

Comments: the system is flushed twice a year. The pressure in the system runs from about 65-130 psi so each home has a pressure reducing valve to reduce the pressure to 35 psi.

They have 8 inch mains that reduce to 6 inch in the distribution system.

SAFETY

	Yes	No	Unk	N/A
Were confined spaces observed?	☒	☐	☐	☐

Describe any confined spaces observed Both tanks are confined spaces and the valve vault by the tank is also a confined space

Confined space safety adequate?	☐	☐	X	☐
Fall risks adequately mitigated?	☐	☒	☐	☐

Note all safety deficiencies (consider items such as ladders, tank supports, guards on rotating electrical equipment, lightning protection for pumps, etc.) _____

MONITORING AND RECORDKEEPING EVALUATION

	Yes	No	Unk	N/A
Does the system have a current Monitoring Schedule?	☒	☐	☐	☐
Bacti monitoring records maintained? (5 years)	☒	☐	☐	☐
Bacti Sample Site Plan submitted?	☐	☐	☐	☐
Familiar with repeat sampling?	☒	☐	☐	☐
Chemical monitoring records maintained? (10 years)	☒	☐	☐	☐
System specific records / plans maintained? (DBP, PB/CU, treatments, waivers, violations, etc.)	☒	☐	☐	☐
Familiar with Public Notice requirements?	☒	☐	☐	☐
Did Surveyor take a bacteriological sample?	☐	☒		

If Yes, date of Sample:____ Time of Sample:____

Comments:

Have new sample site plan. Provided me a copy during the inspection.

MANAGEMENT

	Yes	No	Unk	N/A
Are there sufficient personnel?	☒	☐	☐	☐
Are operators properly certified?	☒	☐	☐	☐
Are personnel adequately trained?	☒	☐	☐	☐
Is there a current O&M manual on-site?	☒	☐	☐	☐
Is an emergency plan on-site and workable?	☒	☐	☐	☐
Has system addressed concerns from previous sanitary survey(s) or technical visit(s)?	☐	☐	☐	☐
Budget exists?	☒	☐	☐	☐
Does system maintain an emergency fund?	☒	☐	☐	☐
Does system contribute to facility replacement fund?	☒	☐	☐	☐
Are abandoned wells present?	☒	☐	☐	☐
Do abandoned wells appear to be properly abandoned? (see ARM 36.21.670)	☐	☒	☐	☐

Comments: The two extra wells (one in each pump house) are used for monitoring the static water level by DNRC. They are not in use and may serve as a reservoir of stagnant water. Both have a sealed access hatch and Mike disinfects the well after DNRC has used them as a precaution.

The emergency plan is their flood plan. The well locations have flooded in the past and they have used bottled water until the wells are back online.

REPORT SUMMARY

Page ____ of ____

PWSID **MT0000138** | SYSTEM NAME **Belt, Town of**

The State, or an authorized agent, must conduct sanitary surveys for all public water supply systems in Montana. DEQ believes that periodic sanitary surveys, along with appropriate corrective actions, are indispensable for assuring the long-term quality and safety of drinking water. When properly conducted, sanitary surveys can provide important information on a water system's design and operations and can identify minor and significant deficiencies for correction before they become major problems.

Minor deficiencies do not pose serious health threats. However, corrective action of minor deficiencies can be critical in the long-term operation and safety of a public water system. Minor deficiencies are generally described as suggested or recommended corrections in the letter to system owner(s).

Significant deficiencies can be defined as a defective water supply component(s) having or likely to have an adverse influence on public health. Significant deficiencies require immediate corrective action in efforts to protect consumers.

EPA and ASDWA guidance identifies eight broad components that should be covered in a sanitary survey. Using these eight broad components as a guide, minor and significant deficiencies should be described in the letter to system owner(s).

1) Source
2) Treatment
3) Distribution system
4) Finished water storage
5) Pumps, pump facilities, and controls
6) Monitoring and reporting, and data verification
7) System management and operation
8) Operator compliance with State requirements

With consideration that significant deficiencies may influence regulatory decisions and monitoring requirements, please list all significant deficiencies observed and corrective action(s) taken below.

Comments: ____

Significant Deficiencies:

1. **The concrete tank serving the town of Belt has severely deteriorated in structural integrity and represent a potential risk to public health.**
2. **The steel storage tank has bullet holes and other patched holes that should be inspected and repaired to prevent the entry of contaminants.**

To Whom It May Concern:

Re: Town of Belt TSEP and DNRC Grant Applications

I strongly support the Town of Belt's efforts to plan for the future. Belt has an aging concrete water tank that was constructed by the WPA in the late 1930's. The tank leaks badly and needs replacement. Belt is currently un-metered and has no way of "auditing" their water loss. It is suspected leaks are impacting their demand.

Belt also has an aging water distribution system that will need scheduled replacement in the future and will face incredibly high costs to ultimately replace the entire system. The first phase will replace the water tank and install meters, allowing them to gain control of water loss and leakage figures and to target water mains for replacement in a second phase. The Town is 57% low and moderate income. A proposed water rate increase in conjunction with the phase 1 water project will take Belt well above target rates as established by the Montana Department of commerce.

I strongly support Belts grant applications.

Sincerely,

Mike Milburn

Re: City of Belt TSEP and DNRC Grant Applications

The City of Belt has a very old water tank that leaks badly, is continuing to deteriorate and needs a replacement. In fact a picture of the deteriorating tank was in a recent article of the Great Falls Tribune which showed the true state of the tank. DEQ recently sent the City of Belt a letter indicating the tank is a public health hazard and DEQ will required replacement of this tank. Now if the State of Montana requires this improvement, I submit that the State of Montana is compelled to assist Belt in obtaining financing to assure the improvement is affordable. The Town is 57% low and moderate income, and the good people of Belt certainly can use your help. Belt is currently unmetered and has no way of "auditing" their water loss. It is suspected that leaks are impacting their demand as well. The proposed project will replace their water tank, providing a safe and secure storage facility for their drinking water, and install meters, allowing them to obtain critical information on water loss and primary leakage areas so that they can target water mains for replacement in a second phase. A proposed water rate increase in conjunction with the phase 1 water project will take Belt well above target rates as established by the Montana Department of commerce. Clean, adequate and affordable water for the City of Belt should the goal for all concerned.

I strongly support Belt's grant applications.

Sincerely,

Senator Brad Hamlett

SD10

Belt Valley Bank

Established 1936

April 15, 2010

Re: Belt Water Project

To Whom It May Concern:

Belt Valley Bank is very interested in the financial, environmental and public health of our citizens. The safety and cost of public drinking water is critical to maintaining our economic status and to attracting new investment to our community.

It is my understanding that the DEQ has inspected the Town's concrete water supply tank and finds it unsafe. Businesses could be damaged in the event of contamination to our water supply, via entrance of contaminants to the tank.

The Belt Valley Bank strongly supports the grant applications from the City of Belt to your agency to help defray the cost these improvements. As our community has a high percentage of low to moderate income citizens, grant funds are essential to make this project possible.

Your consideration will be greatly appreciated.

Sincerely:

R. A. Browning
President

CASCADE COUNTY PLANNING DEPARTMENT

SERVING CASCADE COUNTY, MONTANA

March 10, 2010

Lyle Meeks
PO Box 6350
Great Falls, MT 59406

RE: City of Belt- Water Improvements Project Impacts

Dear Mr. Meeks:

I am writing in support of the City of Belt's Water Improvements project to improve the Belt Water system.

I am aware that the City of Belt and the community are all concerned with the well being, health and overall safety of their community. I am also aware that the City of Belt has committed as much to this work as the City's resources will allow for maintaining the existing community's system.

The location of the existing water tank and its possible relocation would not have any known negative impacts as the alternative location remains outside of any floodplain or designated wetlands.

Once again, I support the City of Belt's project for water improvements and updating their existing system and to take the necessary steps to safeguard the health of their community.

Sincerely,

Susan N Conell

Susan Conell,
Interim Planning Director, Cascade County

Fax (406) 277-4466

April 14, 2010

To Whom it May Concern:

Re: Town of Belt TSEP and DNRC Grant Application

I strongly support the town of Belt's effort to plan for the future. Belt is currently unmetered and has no way of "auditing" water loss. It is suspected that leaks in the existing water tank are creating significant loss of water; therefore, creating increased and unnecessary demand on the water system. The aging concrete tank, constructed in the 1930's by the WPA, and the aging water distribution system, each need to be replaced.

In the first phase of the project the water tank will be replaced and meters will be installed. Data from the meters will be collected to determine water loss through leakage. In phase two of the project, defective water mains targeted through data collected in phase one will be replaced.

The costs of these necessary improvements are more than the Belt community can shoulder without the support of this grant and other potential outside funding sources. Belt is 57% low and moderate income and a proposed water rate increase in conjunction with the phase 1 water project costs will place the Belt rates well over the target rates as established by the Montana Department of Commerce resulting in significant financial stress on Belt families. Your support will help the residence of Belt to ensure a safe water supply and will update the water system to meet current water conservation standards. Grant funding will assist in the completion of this necessary work to improve the infrastructure of the Belt community and provide a safe and efficient water system.

I strongly support Belt's efforts to secure this grant for improvement of the water system.

Sincerely,

Kathleen O. Prody

Kathleen Prody
Superintendent, Belt Schools

April 13 2010

To Whom It May Concern:

Re: Belt Water Project

It is my understanding that Montana DEQ has inspected the Town's concrete water supply tank and finds it unsafe. My business could be damaged in the unlikely event of contamination to the town's water supply, via entrance of contaminants to the tank.

The continued safety and cost of public drinking water is critical to my operation. I am a small business with 15 employees and my operating margins are tight. I want to keep my operation in Belt, and cost containment of water improvements is very important.

I strongly support grant applications from Belt to defray the cost of these improvements. The people of our community are generally of low and moderate income, and we need grant funds to reduce costs.

Sincerely,

Vicki Throckmorton

January 28, 2011

To the members of the Montana Legislature;

We the undersigned citizens, would like to express our support for funding of the Town of Belt's Water Tank Project. We feel that the replacement of the current tank is necessary in order to continue to provide safe drinking water to the citizens of Belt. The condition of the current tank which was built in the 1930's is in jeopardy of complete failure, the concrete has been patched, and is in such a poor condition, that it can no longer be patched. The cost of replacement is more than a town of 630 can bear, therefore, we are requesting funding help for this project. Thank you for your consideration.

January 28, 2011

To the members of the Montana Legislature;

We the undersigned citizens, would like to express our support for funding of the Town of Belt's Water Tank Project. We feel that the replacement of the current tank is necessary in order to continue to provide safe drinking water to the citizens of Belt. The condition of the current tank which was built in the 1930's is in jeopardy of complete failure, the concrete has been patched, and is in such a poor condition, that it can no longer be patched. The cost of replacement is more than a town of 630 can bear, therefore, we are requesting funding help for this project. Thank you for your consideration.

SINCERELY
