Subject: resolution

WHEREAS: the Inter Agency Bison Management Plan (IBMP) occasionally requires the Montana department of livestock to enter private land as part of its effort to control the spread of disease to livestock and humans, and

WHEREAS: these actions have the potential to create conflict with private land owners, and

WHEREAS: the department's bison control activities would create less conflict if better coordination and communication existed between the department and private land owners,

THEREFORE BE IT RESOLVED: that the legislature of the state of Montana encourage the Montana department of livestock to improve it's level of communication and coordination with effected private landowners, including notification of bison control activities occurring on private land, without impairing its obligation to prevent and manage animal disease.
