Map Description – This map illustrates the availability of fiber based broadband internet service throughout Montana. Fiber internet, also known as Fiber to the End User or Fiber to the Home, uses an optical fiber line that is connected directly to the customer's home, apartment, or business. Fiber has the capacity to provide broadband internet connection speeds of up to 100 mbps or more than 10 to 100 times the typical speeds of cable modem or DSL.

Project Description – In 2009 the National Telecommunications and Information Administration awarded the Montana Department of Commerce a grant to perform broadband mapping and planning. The purpose of the Montana Broadband Mapping is to collect data to aid in the development of an accurate map of broadband coverage in Montana.

Data Source – Data in this map was developed by the Montana Broadband Mapping Project - http://mtbroadband.org.

Disclaimer – This map is for informational purposes only. The map is intended for use only at the published scale.
