

We, the United Citizens of the Mary Street and 5-Mile Road Neighborhood strongly oppose the finding of the Billing By-Pass Draft Environment Statement and strongly oppose the three remaining routes under consideration for the following reasons:

- The existing neighborhood is mix of ranch'ettes, typical neighborhoods, and farmland. This type of neighborhood, especially in the heights, is very rare and very desirable. The people who choose to live in this area were specifically drawn to the country setting, the wildlife and the quiet.
- All three of the remaining Billings-By-Pass routes will completely destroy the character, and peace and quite, of the neighborhood and significantly de-value the homes that will not be bulldozed by the road construction. The home value and quality-of-life of the remaining homeowners will be significantly reduced.
- The DEIS traffic study indicates Mary Street from Bitterroot to 5-Mile current has 500 cars per day. Virtually no trucks current use this route. The traffic study further states that the new route will result in 16,000 vehicles per day. This is an increase from 20 cars per hour to 666 cars and trucks per hour. This is a huge increase in ambient noise, which will diminish the quality of life and property value for all Mary Street residents. The study states that noise mitigation will not be required due to excessive costs to construct.
- The homes that will be destroyed by the preferred route on the north side of Mary Street, now serve as wildlife sanctuaries with the ponds and trees and provide a movement corridor for wildlife from the 5-Mile Creek area to the feeding areas of the hay fields south of Mary Street. The proposed Billings-by-Pass will completely fragment this wildlife habit.
- The simple question is....are we going to spend \$112-Million dollars and destroy 13 homes so someone located in East Lockwood can save 7.6 minutes to travel to the Northern Portion of Billings Heights?
- WE SAY NO!

We Support the NO BUILD OPTION:

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes the need for transparency and accountability in financial reporting.

2. The second part of the document outlines the various methods and techniques used to collect and analyze data. It includes a detailed description of the experimental procedures and the statistical analysis performed.

3. The third part of the document presents the results of the study, including a comparison of the different methods and techniques used. It also discusses the implications of the findings and the potential for future research.

4. The fourth part of the document provides a summary of the key findings and conclusions. It highlights the strengths and weaknesses of the study and offers recommendations for further research. The document concludes with a statement of the author's appreciation for the support and assistance provided by the research team.

5. The fifth part of the document is a list of references, which includes a comprehensive list of the sources used in the study. The references are organized alphabetically and include both printed and electronic sources.

6. The sixth part of the document is a list of figures and tables, which provides a detailed description of the visual elements used in the study. Each figure and table is accompanied by a brief caption and a reference to the corresponding text.

7. The seventh part of the document is a list of appendices, which includes a detailed description of the supplementary materials used in the study. Each appendix is accompanied by a brief caption and a reference to the corresponding text.

8. The eighth part of the document is a list of acknowledgments, which expresses the author's gratitude to the individuals and organizations that provided support and assistance during the course of the study. The acknowledgments are organized chronologically and include a detailed description of the contributions of each individual and organization.

9. The ninth part of the document is a list of footnotes, which provides additional information and references for the text. The footnotes are organized numerically and include a detailed description of the content of each footnote.

10. The tenth part of the document is a list of references, which provides a comprehensive list of the sources used in the study. The references are organized alphabetically and include both printed and electronic sources.

We, the United Citizens of the Mary Street and 5-Mile Road Neighborhood strongly oppose the finding of the Billings By-Pass Draft Environment Statement and strongly oppose the three remaining routes under consideration for the following reasons:

- The existing neighborhood is mix of ranch'ettes, typical neighborhoods, and farmland. This type of neighborhood, especially in the heights, is very rare and very desirable. The people who choose to live in this area were specifically drawn to the country setting, the wildlife and the quiet.
- All three of the remaining Billings-By-Pass routes will completely destroy the character, and peace and quite, of the neighborhood and significantly de-value the homes that will not be bulldozed by the road construction. The home value and quality-of-life of the remaining homeowners will be significantly reduced.
- The DEIS traffic study indicates Mary Street from Bitterroot to 5-Mile current has 500 cars per day. Virtually no trucks current use this route. The traffic study further states that the new route will result in 16,000 vehicles per day. This is an increase from 20 cars per hour to 666 cars and trucks per hour. This is a huge increase in ambient noise, which will diminish the quality of life and property value for all Mary Street residents. The study states that noise mitigation will not be required due to excessive costs to construct.
- The homes that will be destroyed by the preferred route on the north side of Mary Street, now serve as wildlife sanctuaries with the ponds and trees and provide a movement corridor for wildlife from the 5-Mile Creek area to the feeding areas of the hay fields south of Mary Street. The proposed Billings-by-Pass will completely fragment this wildlife habit.
- The simple question is....are we going to spend \$112-Million dollars and destroy 13 homes so someone located in East Lockwood can save 7.6 minutes to travel to the Northern Portion of Billings Heights?
- WE SAY NO!

We Support the NO BUILD OPTION:
