

MDT Winter Maintenance Material Usage

- Salt Brine is a water and salt solution containing 23% Sodium Chloride and 77% Water.
- Mag Chloride is a water and Magnesium Chloride solution containing 30% Magnesium Chloride and 70% Water
- Corrosion Inhibitor is added to both products to insure that the corrosive effects are at least 70% less corrosive than reagent grade Sodium Chloride.
- MDT began using Magnesium Chloride in the late 1980's and Salt Brine in 2004

- Sand is blended with an average of 10% salt
