

## Montana Board of Oil and Gas Conservation Environmental Assessment

**Operator:** Zenergy Operating Company  
**Well Name/Number:** Amazing Grace 11-2H  
**Location:** SW SE Section 11 T27N R59E  
**County:** Roosevelt, MT; **Field (or Wildcat)** Wildcat

### Air Quality

(possible concerns)

Long drilling time: No, 30-40 days drilling time.

Unusually deep drilling (high horsepower rig): Triple derrick drilling rig, 900 HP-1000HP, to drill a single lateral horizontal Bakken Formation test, 19,536'MD/10,483'TVD.

Possible H<sub>2</sub>S gas production: Yes, slight.

In/near Class I air quality area: No Class I air quality area.

Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under 75-2-211.

Mitigation:

Air quality permit (AQB review)

Gas plants/pipelines available for sour gas

Special equipment/procedures requirements

Other: \_\_\_\_\_

Comments: Existing pipeline for H<sub>2</sub>S gas in the area.

---

### Water Quality

(possible concerns)

Salt/oil based mud: Yes to oil based invert drilling fluids for intermediate casing hole. Horizontal hole will be drilled with saltwater. Surface casing hole, freshwater, and freshwater mud system to be used.

High water table: No high water table anticipated.

Surface drainage leads to live water: Yes, closest drainage is an unnamed ephemeral tributary drainage to Horse Tied Creek about 1/8 of a mile to the east northeast of this location. Within this drainage is a stock pond, about 3/4 of a mile to the north northwest from this location.

Water well contamination: No, closest water well is about 1 1/8 miles to the west northwest from this location in section 10 and is only 77' in depth. This well will be drilled with freshwater and freshwater muds to 2,200' and steel surface casing will be run and cemented to surface to protect groundwater.

Porous/permeable soils: No, silty clay soils.

Class I stream drainage: No, Class I stream drainages.

Mitigation:

Lined reserve pit

Adequate surface casing

Berms/dykes, re-routed drainage

Closed mud system

Off-site disposal of solids/liquids (in approved facility)

Other: \_\_\_\_\_

Comments: 2,200' surface casing will be drilled with freshwater, steel casing will be run to 2,200' and cemented back to surface. To protect freshwater zones in adjacent water wells. Also, covering Fox Hills aquifer. Adequate surface casing and BOP equipment to prevent problems.

### Soils/Vegetation/Land Use

(possible concerns)

Stream crossings: Will utilize existing road crossings of Horse Tied Creek.  
High erosion potential: No, location will require a small cut of up to 8.4' and a small fill of up to 9.1', required.  
Loss of soil productivity: No, location to be restored after drilling, if nonproductive. If productive unused portion of this drillsite will be reclaimed.  
Unusually large wellsite: No, large well site 430'X330'  
Damage to improvements: Slight surface use appears to be grassland.  
Conflict with existing land use/values: Slight

Mitigation

- Avoid improvements (topographic tolerance)
- Exception location requested
- Stockpile topsoil
- Stream Crossing Permit (other agency review)
- Reclaim unused part of wellsite if productive
- Special construction methods to enhance reclamation
- Other Requires DEQ General Permit for Storm Water Discharge Associated with Construction Activity, under ARM 17.30.1102(28).
- Other \_\_\_\_\_

Comments: Access will be over existing county gravel road and ranch trails. Existing ranch road will need upgrading for heavy trucks. New access road will be built into this location, about 1 mile into this location. Oil based invert drilling fluids will be recycled. Completion fluids will hauled to a commercial Class II disposal. Cuttings and solids will be buried/solidified on site in the lined reserve pit. The pit will be allowed to dry and the pit backfilled. No concerns.

### Health Hazards/Noise

(possible concerns)

Proximity to public facilities/residences: Residences about 3/4 of a mile to the north and 1 mile to the west from this location. The Town of Bainville, MT about 8 miles to the northwest of this location.  
Possibility of H2S: Yes, slight.  
Size of rig/length of drilling time: Triple drilling rig 30 to 40 days drilling time.

Mitigation:

- Proper BOP equipment
- Topographic sound barriers
- H2S contingency and/or evacuation plan
- Special equipment/procedures requirements
- Other: \_\_\_\_\_

Comments: Adequate surface casing cemented to surface with working BOP stack should mitigate any problems.

### Wildlife/recreation

(possible concerns)

Proximity to sensitive wildlife areas (DFWP identified): None identified.  
Proximity to recreation sites: None identified.  
Creation of new access to wildlife habitat: No  
Conflict with game range/refuge management: No  
Threatened or endangered Species: Listed threatened or endangered species are Pallid Sturgeon, Interior Least Tern, Whooping Crane and Piping Plover in Roosevelt County.

Mitigation:

- Avoidance (topographic tolerance/exception)
- Other agency review (DFWP, federal agencies, DSL)
- Screening/fencing of pits, drillsite
- Other: \_\_\_\_\_

Comments: Private surface lands. No live water in the immediate area. No concerns.

---

---

**Historical/Cultural/Paleontological**

(possible concerns)

Proximity to known sites: None identified.

Mitigation

avoidance (topographic tolerance, location exception)

other agency review (SHPO, DSL, federal agencies)

Other: \_\_\_\_\_

Comments: Private surface.

---

---

**Social/Economic**

(possible concerns)

Substantial effect on tax base

Create demand for new governmental services

Population increase or relocation

Comments: No concerns

---

---

**Remarks or Special Concerns for this site**

Horizontal Bakken exploratory well 19,536'MD/10,483'TVD.

---

**Summary: Evaluation of Impacts and Cumulative effects**

No long term impacts expected, some short term impacts will occur, but can be mitigated.

---

I conclude that the approval of the subject Notice of Intent to Drill (does/**does not**) constitute a major action of state government significantly affecting the quality of the human environment, and (does/**does not**) require the preparation of an environmental impact statement.

Prepared by (BOGC): /s/Steven Sasaki
