

Montana Board of Oil and Gas Conservation Environmental Assessment

Operator: Devon Energy Production Company, L.P.
Well Name/Number: State-DIR 16-15
Location: SW SE Section 16 T31N R15E
County: Hill, MT; **Field (or Wildcat)** Tiger Ridge

Air Quality

(possible concerns)

Long drilling time: No, 3 to 4 days drilling time.

Unusually deep drilling (high horsepower rig): No, small single derrick drilling rig to drill to 2500' TVD/2750'TMD.

Possible H₂S gas production: No H₂S gas, formation at TD.

In/near Class I air quality area: No, Class I air quality area.

Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under 75-2-211.

Mitigation:

Air quality permit (AQB review)

Gas plants/pipelines available for sour gas

Special equipment/procedures requirements

Other: _____

Comments: No special concerns – using small rig to drill to 2500' TVD/2750'TMD.

Water Quality

(possible concerns)

Salt/oil based mud: No, freshwater, and freshwater mud system to be used only.

High water table: No high water table anticipated in this area.

Surface drainage leads to live water: No, closest drainages is an unnamed ephemeral drainage, about 1/8 of a mile to the east from this location.

Water well contamination: None, closest water well is about 1 mile and further in any direction from this wellsite. Surface hole will be drilled with freshwater and freshwater mud, steel surface casing will be set to 150' and cemented to surface from 150'. Well will be drilled with freshwater and freshwater drilling fluids. If productive 4/12" casing will be run and cemented to surface to protect ground waters.

Porous/permeable soils: No, sandy bentonitic soils.

Class I stream drainage: No, Class I stream drainages.

Mitigation:

Lined reserve pit

Adequate surface casing

Berms/dykes, re-routed drainage

Closed mud system

Off-site disposal of solids/liquids (in approved facility)

Other: _____

Comments: 150' surface casing well below freshwater zones in nearby water wells. If productive 4 1/2" casing will be cemented to surface. Adequate surface casing and operational BOP equipment will be set and used.

Soils/Vegetation/Land Use

(possible concerns)

Stream crossings: No stream crossings required, only crossing ephemeral drainages.

High erosion potential : No, small cut, up to 5.0' and small fill, up to 8.0', required.

Loss of soil productivity: None, location to be restored after drilling well, if nonproductive. If productive unused portion of drillsite will be reclaimed.

Unusually large wellsite: No, small well site 250'X250'.

Damage to improvements: Slight, surface use appears to be grassland.

Conflict with existing land use/values: Slight.

Mitigation

Avoid improvements (topographic tolerance)

Exception location requested

Stockpile topsoil

Stream Crossing Permit (other agency review)

Reclaim unused part of wellsite if productive

Special construction methods to enhance reclamation

Other _____

Comments: Access will be from existing county gravel road and existing ranch trails. About 1/4 of a mile of new access will be built to access this location from an existing ranch trail. Drilling fluids will be freshwater and freshwater mud system. Cutting will be buried in the unlined pits. Drilling fluids will be offsite disposed of in a stock pond for sealant, with surface owner approval. Pits will be allowed to dry before being backfilled. No special concerns.

Health Hazards/Noise

(possible concerns)

Proximity to public facilities/residences: No residences within 1 mile from this drilling location.

Possibility of H2S: None anticipated.

Size of rig/length of drilling time: Small single derrick drilling rig. Short drilling time 3 to 4 days drilling.

Mitigation:

Proper BOP equipment

Topographic sound barriers

H2S contingency and/or evacuation plan

Special equipment/procedures requirements

Other: _____

Comments: Adequate surface casing cemented to surface with working BOP stack should mitigate any problems.

Wildlife/recreation

(possible concerns)

Proximity to sensitive wildlife areas (DFWP identified): None identified.

Proximity to recreation sites: None identified.

Creation of new access to wildlife habitat: No

Conflict with game range/refuge management: No

Threatened or endangered Species: Black-footed Ferret (Listed in Hill County by US Fish & Wildlife website). Candidate species listed is the Greater Sage Grouse.

Mitigation:

Avoidance (topographic tolerance/exception)

Other agency review (DFWP, federal agencies, DSL)

Fencing of pits, drillsite

Other: _____

Comments: State of Montana, Trust Lands surface lands. Trust Lands will do surface EA.

Historical/Cultural/Paleontological

(possible concerns)

Proximity to known sites None identified

Mitigation

avoidance (topographic tolerance, location exception)
 other agency review (SHPO, DSL, federal agencies)
 Other: _____
Comments: State of Montana, Trust Lands surface lands. Trust Lands will do surface EA.

Social/Economic

(possible concerns)

- Substantial effect on tax base
- Create demand for new governmental services
- Population increase or relocation

Comments: No concerns at this time, development well within the Tiger Ridge Gas Field delineation.

Remarks or Special Concerns for this site

Well is a 2500' TVD/2750'TMD. Eagle Formation test northwest side of Bear Paw Mountains.

Summary: Evaluation of Impacts and Cumulative effects

No long term impacts expected. Some short term impacts will occur, but can be mitigated in a short time.

I conclude that the approval of the subject Notice of Intent to Drill (does/**does not**) constitute a major action of state government significantly affecting the quality of the human environment, and (does/**does not**) require the preparation of an environmental impact statement.
