

**Montana Board of Oil and Gas Conservation  
Environmental Assessment**

**Operator:** XTO Energy, Inc.  
**Well Name/Number:** Wilbur 34X-29  
**Location:** SW SE Section 29 T24N R56E  
**County:** Richland, MT; Field (or Wildcat) Wildcat

**Air Quality**

(possible concerns)

Long drilling time: No, 25-35 days drilling time.  
Unusually deep drilling (high horsepower rig): Triple derrick rig to drill a single lateral horizontal Bakken Formation well, 19,620' MD/10,375' TVD.  
Possible H2S gas production: Slight chance of H2S.  
In/near Class I air quality area: No Class I air quality area.  
Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under rule 75-2-211.

Mitigation:

- Air quality permit (AQB review)
  - Gas plants/pipelines available for sour gas
  - Special equipment/procedures requirements
  - Other: \_\_\_\_\_
- Comments: Existing gas pipelines in the area.

**Water Quality**

(possible concerns)

Salt/oil based mud: Yes, intermediate casing string hole to be drilled with oil based invert drilling fluids. Horizontal lateral hole to be drilled with brine water. Surface casing hole to be drilled with freshwater and freshwater mud.  
High water table: No high water table anticipated.  
Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral tributary drainage to the Three Buttes Creek, about 1/16 of a mile to the south from this location. Within this drainage is a stock pond, about 1/2 of a mile to the east from this location.  
Water well contamination: No, closest water wells are about 3/4 of a mile to the southwest and all other wells are 1 mile and further from this location. These stock and domestic water wells range from 106' to 351' in deep. 2,300' of surface casing will be set and cemented to surface to protect groundwater.  
Porous/permeable soils: No, sandy silty clay soils.  
Class I stream drainage: No, Class I stream drainages.

Mitigation:

- Lined reserve pit
- Adequate surface casing
- Berms/dykes, re-routed drainage
- Closed mud system
- Off-site disposal of solids/liquids (in approved facility)
- Other: \_\_\_\_\_

Comments: 2300' surface casing well below freshwater zones in adjacent water wells. Also, covering Fox Hills aquifer. Adequate surface casing and BOP equipment to prevent problems.

**Soils/Vegetation/Land Use**

(possible concerns)

Steam crossings: None, crossing only ephemeral drainages.  
High erosion potential: No, moderate cut up to 22.4' of cut and moderate fill up to 13.4', required.  
Loss of soil productivity: None, location to be restored after drilling well, if nonproductive. If productive unused portion of drillsite will be reclaimed.  
Unusually large wellsite: No, large well site 430'X330'  
Damage to improvements: Slight, surface use appears to be grassland .  
Conflict with existing land use/values: Slight

Mitigation

- Avoid improvements (topographic tolerance)
- Exception location requested
- Stockpile topsoil
- Stream Crossing Permit (other agency review)
- Reclaim unused part of wellsite if productive
- Special construction methods to enhance reclamation
- Other: Requires DEQ General Permit for Storm Water Discharge Associated with Construction Activity, under ARM 17.30.1102(28).

Comments: Access will be over existing county road, #331. An access will be built from the existing county road into this location, about 0.7 miles of new access road will be constructed. Operator will utilize a closed mud system. Oil based invert drilling fluids will be recycled. Freshwater surface hole cuttings will be disposed of offsite. Oil based drill cuttings will be disposed of offsite. Completion pit fluids will be hauled to a licensed saltwater disposal. No concerns.

### Health Hazards/Noise

(possible concerns)

Proximity to public facilities/residences: Yes, residences, about 3/4 of a mile to the southwest, about 1 mile to the northeast and about 1 mile to the southwest from this location.  
Possibility of H2S: Slight chance of H2S  
Size of rig/length of drilling time: Triple drilling rig 25 to 35 days drilling time.

Mitigation:

- Proper BOP equipment
- Topographic sound barriers
- H2S contingency and/or evacuation plan
- Special equipment/procedures requirements
- Other: \_\_\_\_\_

Comments: Adequate surface casing, 2300', cemented to surface with working BOP stack should mitigate any problems. Noise should not be a problems, sufficient distance from residence to rig should mitigate this.

### Wildlife/recreation

(possible concerns)

Proximity to sensitive wildlife areas (DFWP identified): None identified.  
Proximity to recreation sites: None identified.  
Creation of new access to wildlife habitat: No  
Conflict with game range/refuge management: No  
Threatened or endangered Species: Threatened or endangered species listed in Richland county by USFW service are Pallid Sturgeon, Piping Plover, Interior Lease Tern and Whooping Crane. Candidate species are the Greater Sage Grouse and Sprague's Pipit. NH tracker lists no species of concern in this Township and Range.

Mitigation:

- Avoidance (topographic tolerance/exception)
- Other agency review (DFWP, federal agencies, DSL)
- Screening/fencing of pits, drillsite

Other: \_\_\_\_\_  
Comments: Surface location is on private grassland with no nearby live water. No concerns

---

---

**Historical/Cultural/Paleontological**

(possible concerns)

Proximity to known sites: None identified \_\_\_\_\_

Mitigation

avoidance (topographic tolerance, location exception)

other agency review (SHPO, DSL, federal agencies)

Other: \_\_\_\_\_

Comments: Private surface grassland. No concerns. \_\_\_\_\_

---

---

**Social/Economic**

(possible concerns)

Substantial effect on tax base

Create demand for new governmental services

Population increase or relocation

Comments: No concerns \_\_\_\_\_

---

---

**Remarks or Special Concerns for this site**

Single lateral horizontal Bakken Formation well, 19,620' MD/10,375' TVD.

---

**Summary: Evaluation of Impacts and Cumulative effects**

No long term impact expected. Some short term impacts will occur.

---

---

I conclude that the approval of the subject Notice of Intent to Drill (does/**does not**) constitute a major action of state government significantly affecting the quality of the human environment, and (does/**does not**) require the preparation of an environmental impact statement.
