

**Montana Board of Oil and Gas Conservation
Environmental Assessment**

Operator: Continental Resources, Inc.

Well Name/Number: Baird 1-34H

Location: NW NE Section 34 T26N R53E

County: Richland, MT; **Field (or Wildcat)** W/C (Bakken Horizontal)

Air Quality

(possible concerns)

Long drilling time: No, 30 to 40 days drilling time.

Unusually deep drilling (high horsepower rig): No triple derrick drilling rig to drill to 18,740'MD/9,055'TVD a single lateral horizontal Bakken Formation well.

In/near Class I air quality area: Yes nearest Class I air quality area is the Fort Peck Indian Reservation, about 6.1 miles to the northwest from this location.

Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under 75-2-211.

Mitigation:

Air quality permit (AQB review)

Gas plants/pipelines available for sour gas

Special equipment/procedures requirements

Other: _____

Comments: No special concerns – using triple rig to drill a 18,740'MD/9,055'TVD single lateral horizontal Bakken Formation well test. If there are existing pipeline for gas in the area then gas must be tied into system or if no gathering system nearby gas can be flared under Board Rule 36.22.1220.

Water Quality

(possible concerns)

Salt/oil based mud: Yes, oil based invert drilling fluid system on the mainhole and saltwater for the horizontal lateral. Freshwater and freshwater mud system on surface hole, Rule 36.22.1001.

High water table: No high water table anticipated at this surface location.

Surface drainage leads to live water: Yes, closest drainages are unnamed ephemeral tributary drainages to Promised Land Coulee and Charley Creek, about 1/8 of a mile to the north and about 1/4 of a mile to the south from this location. Within this ephemeral drainage are stock ponds. Charley Creek is about 2 miles to the northeast from this location.

Water well contamination: No, nearest water wells are about 1/2 of a mile to the east, about 1/2 of a mile to the southeast, about 5/8 of a mile to the west and about 3/4 of a mile to the southeast from this location. Depth of these stock and domestic water wells range from 10' to 426'. Surface hole must be drilled with freshwater and freshwater mud, Rule 36.22.1001. Surface casing will be set at 1000' and cemented to surface.

Porous/permeable soils: No, silty sandy clay soils.

Class I stream drainage: No Class I stream drainages in the area of review.

Mitigation:

Lined reserve pit

Adequate surface casing

Berms/dykes, re-routed drainage

Closed mud system

Off-site disposal of solids/liquids (in approved facility)
 Other: Lined cuttings pit will be utilized for the disposal of drill cuttings on the well location.

Comments: 1000' of surface casing cemented to surface adequate to protect freshwater zones, Rule 36.22.1001. No concerns.

Soils/Vegetation/Land Use

(possible concerns)

Stream crossings: No stream crossings anticipated.

High erosion potential: No, small cut, up to 6.6' and small fill, up to 7.3', required.

Loss of soil productivity: No, location will be restored after drilling, if nonproductive. If productive unused portion of drillsite will be reclaimed.

Unusually large wellsite: Yes, a very large wellsite, 400'X450' for 1 well location.

Damage to improvements: Slight, surface use grazing land.

Conflict with existing land use/values: Slight

Mitigation

Avoid improvements (topographic tolerance)

Exception location requested

Stockpile topsoil

Stream Crossing Permit (other agency review)

Reclaim unused part of wellsite if productive

Special construction methods to enhance reclamation

Other _____

Comments: Will use existing county road, #315 and existing lease road. About 217' of new access road will be built into this location, from the existing lease road. Drill cutting will be disposed of in the lined cuttings pit. Oil based invert drilling fluids will be recycled. Surface drilling fluids will be recycled and/or haul to a commercial disposal. Lined cuttings pit will be backfilled when dry. No special concerns.

Health Hazards/Noise

(possible concerns)

Proximity to public facilities/residences: Closest residence is about 3/4 of a mile to the southeast from this location. St Bernard's Church is about 1.25 miles to the southeast from this location.

Possibility of H2S: Slight chance of H2S (Mississippian Formations).

Size of rig/length of drilling time: Triple drilling rig/short 30 to 40 days drilling time.

Mitigation:

Proper BOP equipment

Topographic sound barriers

H2S contingency and/or evacuation plan

Special equipment/procedures requirements

Other: _____

Comments: Adequate surface casing and operational BOP should mitigate any problems(5,000 psig annular and double ram BOP), Rule 36.22.1014. No concerns

Wildlife/recreation

(possible concerns)

Proximity to sensitive wildlife areas (DFWP identified): None identified.

Proximity to recreation sites: None identified.
Creation of new access to wildlife habitat: No
Conflict with game range/refuge management: No
Threatened or endangered Species: Species identified as threatened by the USFWS are Pallid Sturgeon, Interior Least Tern, Piping Plover and Whooping Crane. Species listed as candidate species are the Greater Sage Grouse and Sprague's Pipit. NH tracker website for this Township and Range lists twelve (12) species of concern, Piping Plover, Least Tern, Northern Redbelly Dace, Blue Sucker, Iowa Darter, Shortnosed Gar, Sturgeon Chub, Sicklefin Chub, Pearl Dace, Paddlefish, Sager and Pallid Sturgeon.

Mitigation:

- Avoidance (topographic tolerance/exception)
- Other agency review (DFWP, federal agencies, DSL)
- Screening/fencing of pits, drillsite
- Other: _____

Comments: Private surface grazing land. There maybe species of concern that maybe impacted by this wellsite. We ask the operator to consult with the surface owner as to what he would like done, if a species of concern is discovered at this location. The Board of Oil & Gas has no jurisdiction over private surface lands.

Historical/Cultural/Paleontological

(possible concerns)

Proximity to known sites: None identified .

Mitigation

- avoidance (topographic tolerance, location exception)
- other agency review (SHPO, DSL, federal agencies)
- Other: _____

Comments: Private surface grazing land. There maybe possible historical/cultural/paleontological sites that maybe impacted by this wellsite. We ask the operator to consult with the surface owner as to his desires to preserve these sites or not, if they are found during construction of the wellsite. The Board of Oil & Gas has no jurisdiction over private surface lands.

Social/Economic

(possible concerns)

- Substantial effect on tax base
- Create demand for new governmental services
- Population increase or relocation

Comments: Wildcat well. No concerns.

Remarks or Special Concerns for this site

Well is an 18,740'MD/9,055'TVD single lateral horizontal Bakken Formation well test.

Summary: Evaluation of Impacts and Cumulative effects

No long term impact expected, some short term impacts will occur.

I conclude that the approval of the subject Notice of Intent to Drill (does/**does not**) constitute a major action of state government significantly affecting the quality of the human environment, and (does/**does not**) require the preparation of an environmental impact statement.
