The Applicant requests 896.3 GPM up to 1,072 AF per year. The water will be diverted by hydraulically connected shallow ground water wells located adjacent to the Missouri River. Water will be used for the Highwood Generating Station, a 120 MW natural gas fired plant proposed by the Southern Montana Electric Generation and Transmission Cooperative. The original Highwood Generating Station was proposed as a coal-fired facility and requested 3200 GPM up to 5161 AF per year. These plans have since been modified in favor of a natural gas-fired plant. The place of use for the proposed plant site will not change. The diversion means will change to hydraulically connected ground water wells, which are proposed to be less obtrusive to aquatic life in the Missouri River. Part II.
