

These charts compare the trend lines for the percentage change in the number of job opening listed by Department of Labor and Industry Job Service Offices between FY 2007 and FY 2011. As shown, the number of positions listed declines for all counties except Roosevelt during the Great Recession years of 2008 and 2009. The job opening recovery from the recession is signficantly quicker in the counties affected by the oil boom. The jobs listed at the Job Service Offices are not specific to the oil industry, but include all types of employment in the county.
