Legislative Fiscal Analyst
Amy Carlson

November 16, 2012

Members of the Revenue and Transportation Interim Committee (RTIC):

In accordance with the provisions of Section 5-12-302, MCA, I am submitting electronically the Legislative Fiscal Division revenue estimate recommendations for the fiscal years 2013, 2014, and 2015. I am providing this information in advance of the November 19th RTIC meeting to provide an opportunity for committee members to study the estimates and assumptions used in developing the estimates.

This report provides a “profile” of each major general fund revenue source, with specific detail on the methodology and assumptions used to develop these recommendations. Please note that in addition to the general fund components, the LFD report also contains recommendations for some specific non-general fund revenue sources that are significant in the development of the state budget for the 2015 biennium.

A paper copy of this report will be provided during the committee meeting.

We believe this document and the process outlined above will serve as an effective tool as you carry out your statutory responsibility to develop revenue estimates for the 2013 legislative session. My staff and I look forward to assisting in this task.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Amy Carlson".

Amy Carlson
Legislative Fiscal Analyst

Purpose of the Report

As delineated in Section 5-5-227(2)(a), MCA, the Revenue and Transportation Interim Committee (RTIC) is required to prepare “an estimate of the amount of revenue projected to be available for legislative appropriation.” In addition, sections 5-12-302(2) and 5-12-302(6) specifically require the Legislative Fiscal Analyst (LFA) to “estimate revenue from existing and proposed taxes” and also requires the LFA to “assist the revenue and transportation interim committee in performing its revenue estimating duties...”

The purpose of this report is to document the LFD recommendations regarding anticipated revenues for FY 2013 through 2015. It should be noted that the accompanying LFD estimates are based on current federal and state laws and do not include estimates for revenues due to litigation or any other pending legal issues. This position is consistent with past recommendations to the RTIC.

Montana state government, like any other business, is influenced by economic and demographic developments. For example, Montana’s economic base and the strength of the U.S. economy determines the level of revenues collected from personal income and corporate license taxes, property taxes, natural resource taxes, and investment earnings. Similarly, both economic and demographic variables affect state government disbursements for education, human services, corrections, and other governmental services.

Montana’s total revenue base is comprised of a number of taxes and fees plus numerous federal reimbursements or grants. Revenues are further enhanced from the investment of trust monies and idle cash pending disbursement from the state treasury. Since individual income tax is the state’s largest general fund tax source, economic developments or trends in the areas of employment and income levels significantly influence available revenues to fund governmental services. Federal revenue correspondingly is used to fund a number of human service, transportation, and educational services. In a number of instances, general or state special revenue fund dollars are required to provide a state match before the federal funds can be disbursed.

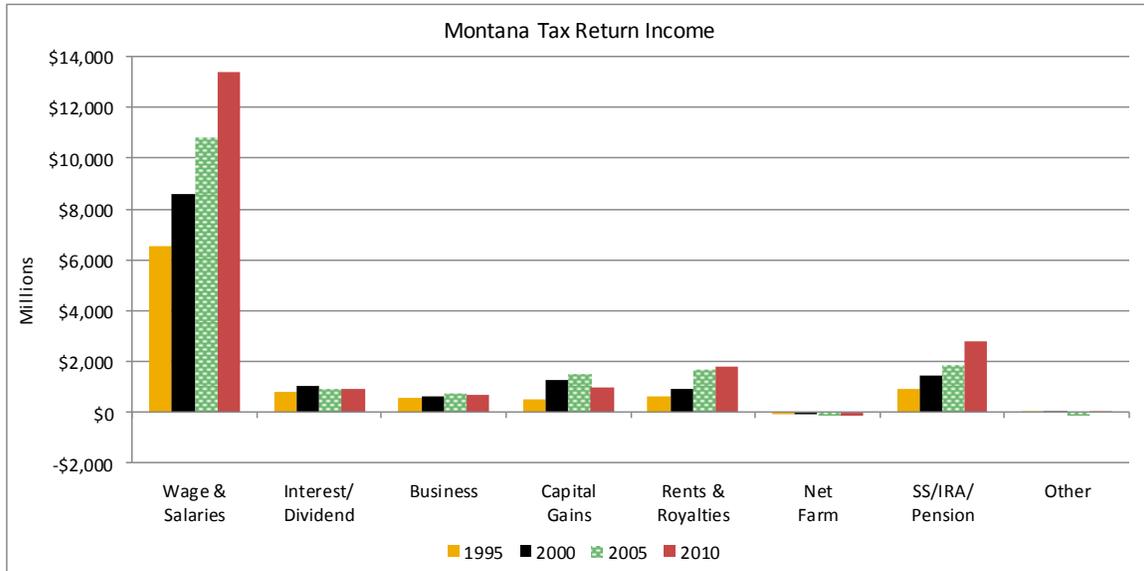

Montana’s total expenditure base is targeted toward educational and human service programs with a significant allocation to highway construction. Education and human service costs are driven by some of the same economic and demographic conditions that influence state revenues. If employment levels increase, this usually translates to an increase in population or a reduction in unemployment levels. With population increases comes a corresponding increase in educational and human service costs. A greater population requires a better transportation system not only for the general populace, but also for the businesses that expect to expand to meet the needs of an ever-growing population.

Over the past 20 years, Montana has experienced a wide variety of economic conditions. The 1990’s were generally good years for Montana’s economy; with a few exceptions, Montana experienced above-average employment and wage levels that translated into strong tax revenue growth. This revenue growth was further enhanced by a significant increase in the equity markets and resulting growth in capital gains income. In 2001, the national economy went through a brief recession, which negatively impacted Montana’s revenue stream by the same factors that had earlier created extraordinary growth. Beginning in FY 2004, general fund revenues began a period of unprecedented growth increasing by 9.4% annually from FY 2003 to FY 2008. At the beginning of FY 2008, the U.S. economy again slid into recession, led by the sub-prime mortgage crisis. Due to the high price of commodities, Montana’s economy initially seemed unlikely to experience the same level of economic downturn; however, by FY 2009, it was apparent that general fund revenues were declining. Total general fund revenues declined 7.5% in FY 2009 and 10.0% in FY 2010. Similar to the anemic national growth following the “Great Recession,” Montana general fund revenues increased 9.6% in FY 2011 and 5.0% in FY 2012.

The three income sources primarily responsible for Montana’s revenue volatility are individual income tax, corporation income tax, and oil and natural gas production taxes. Individual income tax experienced increased growth from federal tax reform, and the housing and commodity bubbles; this led to increases in wage growth (especially in real wage growth per worker); higher rent, royalty, and partnership income; and higher capital gains income from 2004 through 2008. These increases in individual income tax revenues occurred even with the implementation of SB407, the state individual income tax reform legislation enacted by the 2003 Legislature. SB 407 reduced tax rates on income and instituted a new capital gains credit of 1% beginning January 1, 2005. The capital gains credit increased to 2% on January 1, 2007. Conversely, it was the decline of housing and commodity prices, as well as the drop in the stock market, that produced sharply lower revenues in FY 2009-2010. The corporation income tax revenues rebounded as Montana corporations have recovered from the recession of 2001 and the effects of September 11, 2001; the revenues retracted as Montana started to feel the effects of the more recent recession. Although the natural resource boom in Montana increased corporate profitability for energy companies and its residual industries, the declining level of production will continue to negatively impact the industry.

Key Risks to Economic Assumptions

Income – As the unemployment rate increases or stabilizes, Montana wage and salary income may decline or increase only modestly. Since the taxes paid on wage and salary income is the largest component of individual income tax revenue (Montana’s largest general fund revenue source), even a minimal decline in wage and salary income could have a negative impact on general fund revenue. The graph below shows the importance of wage and salary income compared to the other components of income.

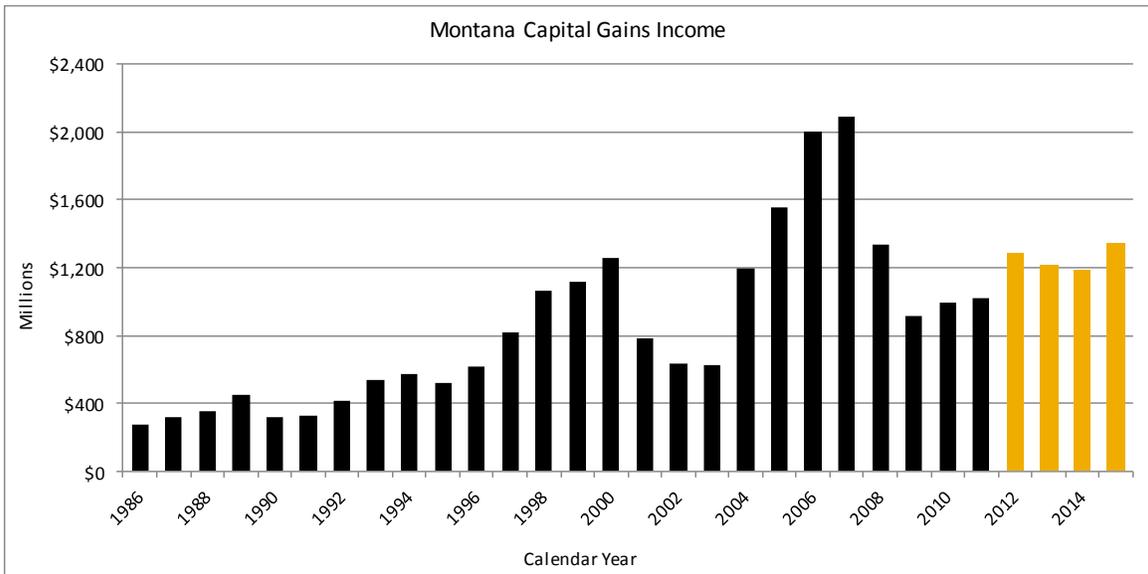

Interest Rates – The federal funds rate set by the Federal Reserve is currently at historical lows. This rate cannot get much lower and may increase if inflation shows signs of life. Low interest rates are a double-edged sword in which low rates may stimulate economic activity which potentially increases wage and salary and business income. On the other hand, Montana’s earnings from trust funds and excess investable cash decrease fairly quickly at reduced interest rates. Investment income reported for income tax purposes also declines, although this impact can be delayed.

Corporate Profits - In light of the current federal “fiscal cliff” issue,” a significant risk to corporate profitability exists that could reduce corporation license tax receipts in the near term as well as the long term. Net operating loss (NOL) carry back provisions provided in 15-31-119, MCA occurs when deductions exceed gross income. If for any taxable period a net operating loss is sustained, the loss must first be accounted for as a carry back to each of the three taxable periods preceding the taxable period of the loss. If the NOL deductions cannot be fully deducted from the prior years, the remaining deductions may be carried forward to each of the five taxable periods following the taxable period of the loss. Typically, the NOL can be fully deducted through the three period carry back. The loss is deducted against taxes that have usually been paid prior to the period of the loss and refunds are issued for the paid taxes. This situation makes the impact of corporate NOL’s on total fiscal year collections appear even greater than they may have been because much of the effect is realized in the current fiscal year.

Energy Prices – If the global economic recovery continues to be gradual or even slows, the demand for energy commodities, primarily oil and natural gas, may be slow to recover. A current example is the retraction in oil prices and the continued weak price for natural gas. If a “double dip” recession were to occur because of the federal “fiscal cliff” reduced prices could prevail until an economic recovery occurs at a later date. Low energy prices could hamper further natural resource exploration and development efforts and would result in less revenue to state accounts

Equities – The equity market volatility is one of the main contributors to large fluctuations in state general fund revenues. A significant portion of non-labor income is derived from net capital gains and interest and dividend income. Increases in equity markets do not necessarily mean state revenue will increase. In order for a gain to materialize, investors need to sell equities at a higher price than they paid for them. Conversely, investors may sell equities at a loss thereby offsetting other types of income. Losses can be carried forward at \$3000 per year until the loss is liquidated. The figure below shows the history of capital gains income since 1986.

Federal “Fiscal Cliff” – Federal fiscal policy could impact state general fund revenues and force the legislature to decide whether to supplant loss federal funds or reduce state services. At this time, Congress has not taken any action on the expiration of the Economic Growth and Tax Relief Reconciliation Act of 2001, and the Jobs Growth Relief Act Reconciliation Act of 2003 tax reductions, nor has it dealt with the reductions in federal spending. Without Congressional action, the tax reductions will expire on January 1, 2013 and significant spending cuts will be implemented. Many economists have warned that no Congressional action will translate to a significant economic downturn. The volatility in the equities market suggests that the US plus other countries are quite concerned about this issue. The current general fund estimates are based on the termination of the tax reductions, but do not account for the spending reductions.

Major revenue source contributors to the state general fund (and interrelated state special funds) are experiencing significant improvements from the FY 2009 and FY 2010 levels. These improvements began in FY 2011 and are expected to continue through FY 2015. Montana’s revenue recovery has been strong while the national economic recovery has been slow. This disparity is highly correlated to Montana’s natural resource industry and the positive impacts of the developments in eastern Montana.

General Fund Revenue Implications

Montana's fiscal outlook for revenue growth is more optimistic than the last biennium. The key economic assumptions targeted as most affecting state government receipts are Montana total income, employment, population levels, inflation rates, corporate profits, property values, interest rates, and energy prices.

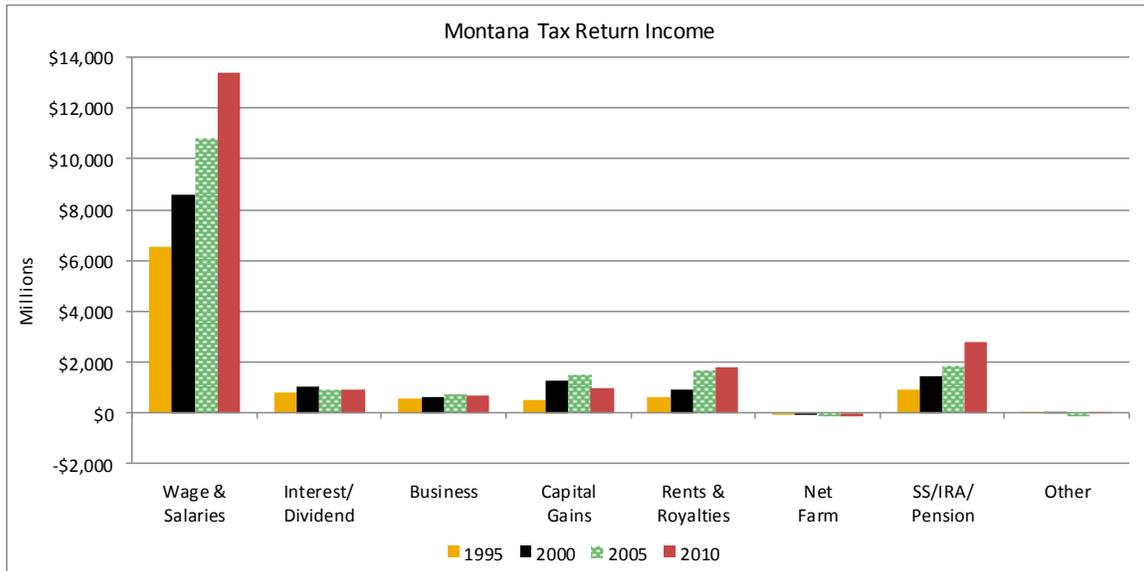

As shown in the following figure, individual income tax, corporation income tax, property tax, vehicle tax, and natural resource taxes are expected to contribute 81% to the total general fund revenue stream during the 2015 biennium. Total general fund revenues for the 2015 biennium are projected to increase 8.0% over the 2013 biennium projections. The comparative change by major revenue category is shown at the bottom of the figure.

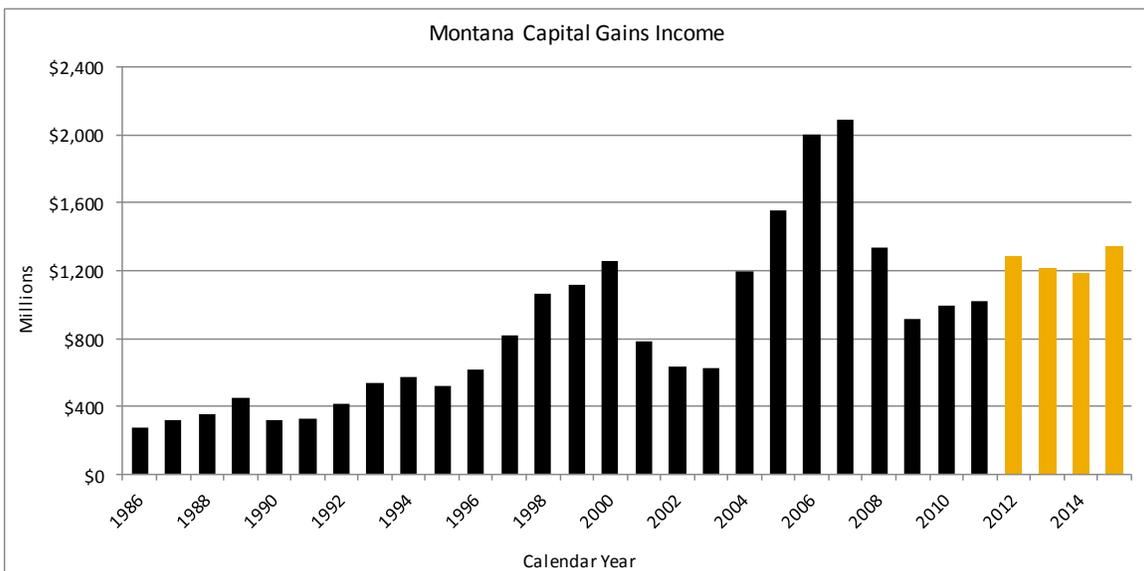

The next section of the report highlights the significant economic assumptions used by the LFD to develop the revenue estimate recommendations contained in this document. Each assumption is discussed and is graphically portrayed to give the reader a perspective of the historical trend versus the forecast amount.

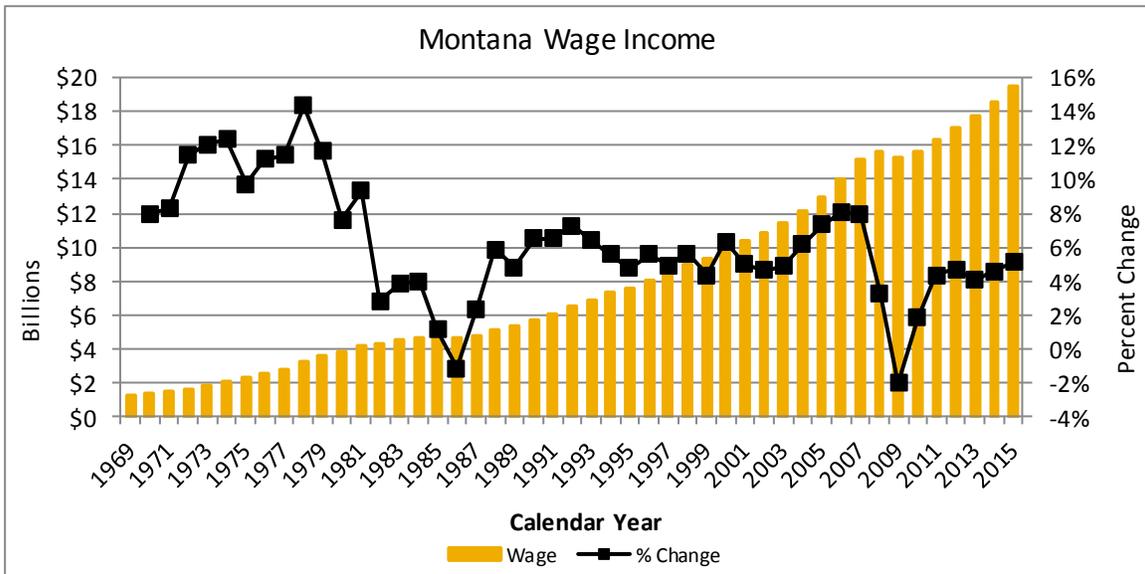

Montana Total Income

The total of all income sources listed on the Montana personal income tax form is referred to as Montana total income. The Department of Revenue tracks income from 11 different components, including wages, interest, dividends, business, capital gains, supplemental, rental, farm, social security, IRA and pension, and other incomes. Montana total income is the single most important variable to consider in the revenue estimation process. Of the 11 income items, wage and salary income provides the largest portion of Montana total income. Since 1990, wage and salary income has contributed an annual average of 64.9% of total income. In 2011, it contributed 65.6%, or \$14.0 billion. The average compounded growth from 1990 to 2011 is 5.0%.

In recent times, capital gains income has been the focus of much conversation and speculation. Capital gains income has increased in relative importance over the decade. In 1990, capital gains made up only 4.2% of total income, with reported income of \$318 million. Capital gains income grew moderately through the decade, when in 2001 a significant decline occurred, coinciding with the recession. Rapid growth followed in the later part of the 2000 decade, and by 2007 capital gains had grown to 9.7% of total income, with income at \$2,088.6 million. However, in 2008, capital gains income was again influenced by a recession and declined by over 35%. In 2009, capital gains income declined by almost 32% reaching the amount of \$912 million. Projections of IHS indicate that capital gains income will increase by 7.2% annually between 2012 and 2015.

Montana Wages

The average annual growth in Montana wages and salaries income is 5.1% between 1990 and 2011. Wage growth exceeding this average occurred in the early nineties and again in 2004-2007. In both these periods inflation was relatively high, i.e. greater than 2.5%, and employment growth was relatively high. However, the growth of wages has declined sharply to rates of -2.1% and 1.8% in 2010 and 2011 respectively.

The following table displays the data considered in developing the forecast for the individual income tax. The Montana inflation forecast for 2012 through 2015, as provided by IHS in the November 2012 issue of forecasts, shows the rate of inflation remaining relatively low through the period of analysis. The state rate is expected to be 1.3% in 2013, 1.8% in 2014, and 1.6% in 2015.

The growth in wages between 2012 through 2015 is provided through the LFD wage and salary projections. From 2005 through 2007, wages on average grew at a rate of 7.6%. However in 2008 and 2009, wages grew at a rate of only 5.4% and -1.6% respectively. The state wages are expected moderate growth in the forecast period of 4.0% in 2013, 4.0% in 2014, and 4.5% in 2015.

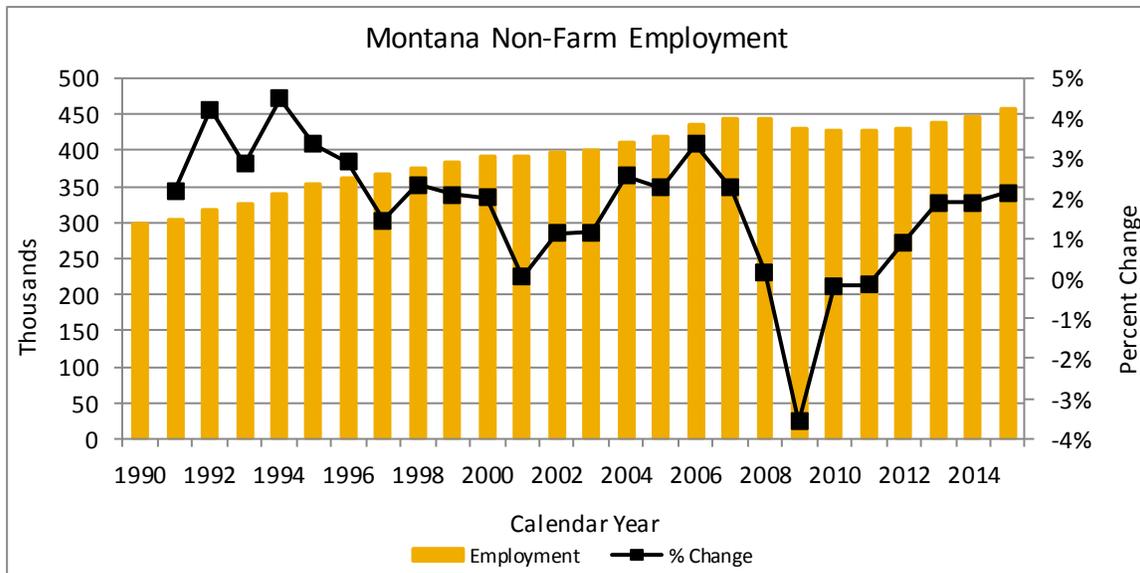

Employment growth is also expected to be modest in 2012 through 2015. Employment growth between 2003 and 2007 averaged 2.4%. However, in 2008 employment grew at only 0.2% and in 2009 it turned negative. Estimates for 2012 through 2015 project an average growth of 1.7% annually.

Growth in real wages per worker is defined as wages per worker adjusted for inflation, was low in the early nineties but has been above the 1991-2007 average of 0.6% growth since 1997. Considering the assumptions on growth in wages, employment, and inflation, real wages are expected to increase around 1% through the forecast period.

Wage and Salary Income Growth				
CY	Employment Growth	State Inflation	Real Wage Per Worker	Wage Growth
1991	2.2%	4.7%	-0.4%	6.5%
1992	4.2%	3.1%	-0.2%	7.3%
1993	2.9%	3.0%	0.4%	6.4%
1994	4.5%	2.5%	-1.4%	5.6%
1995	3.4%	3.0%	-1.6%	4.8%
1996	2.9%	2.8%	-0.1%	5.6%
1997	1.5%	2.3%	1.1%	4.9%
1998	2.3%	1.7%	1.5%	5.6%
1999	2.1%	2.0%	0.2%	4.3%
2000	2.0%	3.7%	0.5%	6.4%
2001	0.0%	3.2%	1.7%	5.0%
2002	1.1%	1.1%	2.4%	4.6%
2003	1.2%	2.1%	1.5%	4.9%
2004	2.6%	3.3%	0.2%	6.1%
2005	2.3%	2.5%	2.3%	7.3%
2006	3.4%	4.3%	0.2%	8.0%
2007	2.3%	2.7%	2.8%	7.9%
2008	0.2%	5.0%	-1.8%	3.3%
2009	-3.6%	-1.4%	3.1%	-2.0%
2010	-0.2%	1.1%	0.9%	1.8%
2011	-0.2%	3.6%	0.9%	4.3%
2012	0.9%	1.7%	2.1%	4.7%
2013	1.9%	1.3%	0.8%	4.1%
2014	1.9%	1.8%	0.8%	4.6%
2015	2.1%	1.6%	1.3%	5.1%

Montana Employment

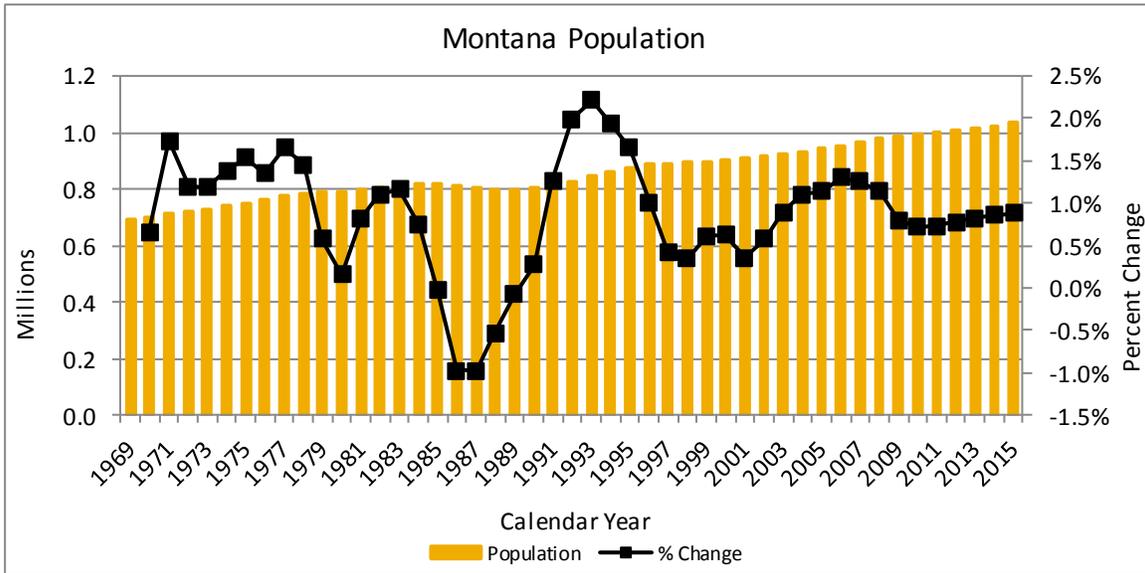

Average annual growth in total employment between 1990 and 2011 is 1.7%. It is expected that total non-farm employment growth through 2012 will be 0.9%, and continue to grow slowly in the forecast period with rates of 1.9% in 2013 and 2014, and 2.1% in 2015.

Montana Population

Population statistics are used to develop estimates for many of the revenue sources including beer, wine, liquor, and cigarette taxes. In addition to those sources where population has a direct effect, the size of the population indirectly affects the profitability of all businesses and the employment levels statewide. Accurate population estimates are especially important when determining the changes expected in overall and per capita income for the state.

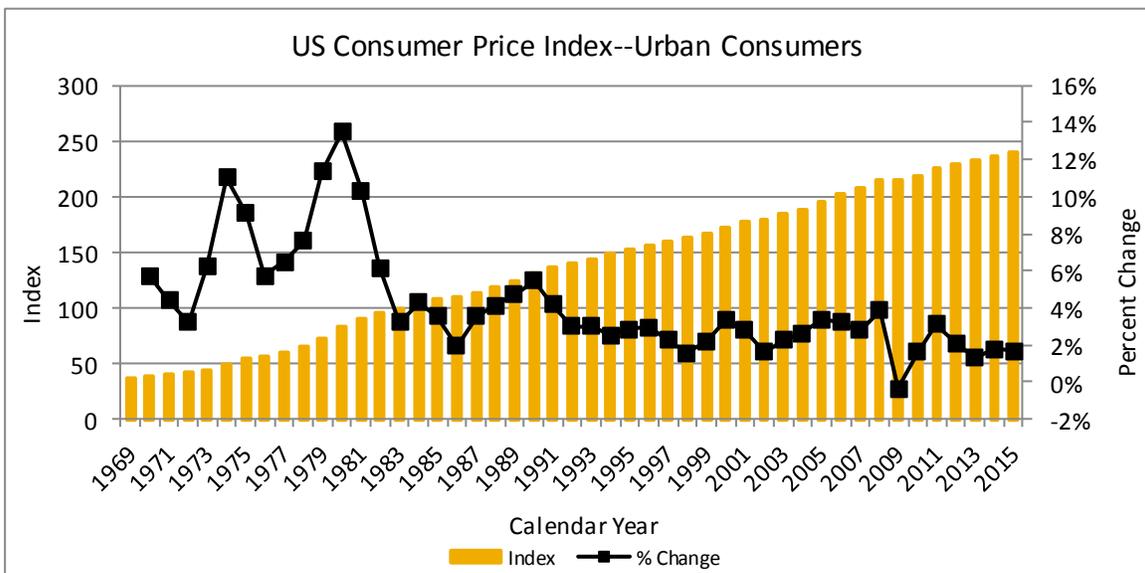

Historic population data is gathered from the U.S. Census department while projections are obtained from IHS. Since the early 1990's, Montana has experienced positive growth in total population varying between 0.1% in 1998 to 2.3% in 1994. Growth in recent years has been slow, averaging 0.8% growth annually from 2007 to 2010. Growth through the next biennium is estimated at about 0.9% annually.

Inflation Rates

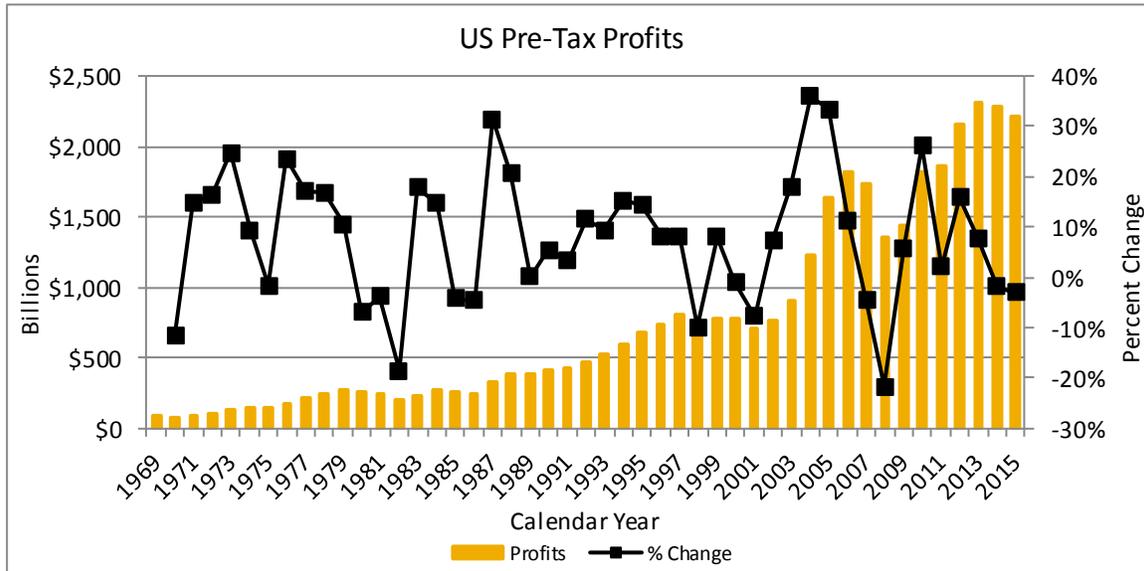

The inflation rate is measured by the price change of the Consumer Price Index (CPI) “shopping basket” of goods and services. Inflation is noted to have both good and bad effects. As prices rise, businesses increase prices and tend to become more profitable. At the same time, the consumer realizes a reduction in disposable income and spends less. Several areas where this information is vital in determining costs include minerals, timber, energy resources, and most services.

Since Montana’s individual income tax structure is fully indexed by changes in the consumer price index, this assumption is critical in the formulation of the individual income tax forecasts. The U.S. Bureau of Labor Statistics provides the historical CPI data for the all-urban customers data set. Since 1990, the average annual rate of inflation has been 2.6%. IHS forecasts inflation at 2.1% for 2012, 1.3% for 2013, 1.8% for 2014, and 1.7% in 2015.

Corporate Profits

The profitability of corporate America is an important factor in estimating revenues. Corporate profitability affects both corporation license tax and individual income tax estimates. When corporations are profitable nationally, there is an expectation that corporations will be profitable in Montana. Additionally, greater corporate profitability is largely responsible for the amount of dividends corporations pay to stockholders as well as the value of equity investments. During the most recent years, the reduction of corporate profits has translated to lower corporate license tax collections. According to IHS, between 1990 and 1997, U.S. corporation pre-tax profits increased by an annual average of 10.3%. However, from 1997 through 2001, profits decreased by an average of 3.0%, the greatest decrease of 8.5% occurring in 2001. Between 2006 and 2011, corporate profitability grew an average annual rate of 0.3%. During the forecast period, corporation profits are expected to grow at an average rate of 4.5% annually.

Property Values

Change in statewide property values is the critical assumption behind the estimates for property taxes. Historic property values are obtained from the Montana Department of Revenue. Total statewide taxable value increased slowly during the first part of the 1990's, but fell in FY 2000. This decline was primarily due to business equipment tax changes enacted by previous legislatures. Other reductions occurred in electrical generating and telecommunication property. Property values resumed an upward trend in 2001 and have increased every year since that time.

On January 1, 2009, new reappraisal values were placed on residential, commercial, agricultural land and timber land. The 2009 legislature mitigated these increases by continuing to phase in assessed values and providing a schedule over the following six years by which tax rates are decreased and homestead and comstead exemptions are increased. Taxable values are expected to increase at an annual average of 3.0% between FY 2012 and FY 2015, compared with 4.5% per year between FY 2004 through FY 2010.

Significant changes have taken place in statewide property values since FY 1998. In that year, 48.0% of total statewide value was in class 4, residential and commercial property, and 11.5% of total value was in class 8, business equipment personal property. In FY 2012, the class 4 taxable value was 58.7% of the total property tax base, while class 8 was only 7.7% of the base.

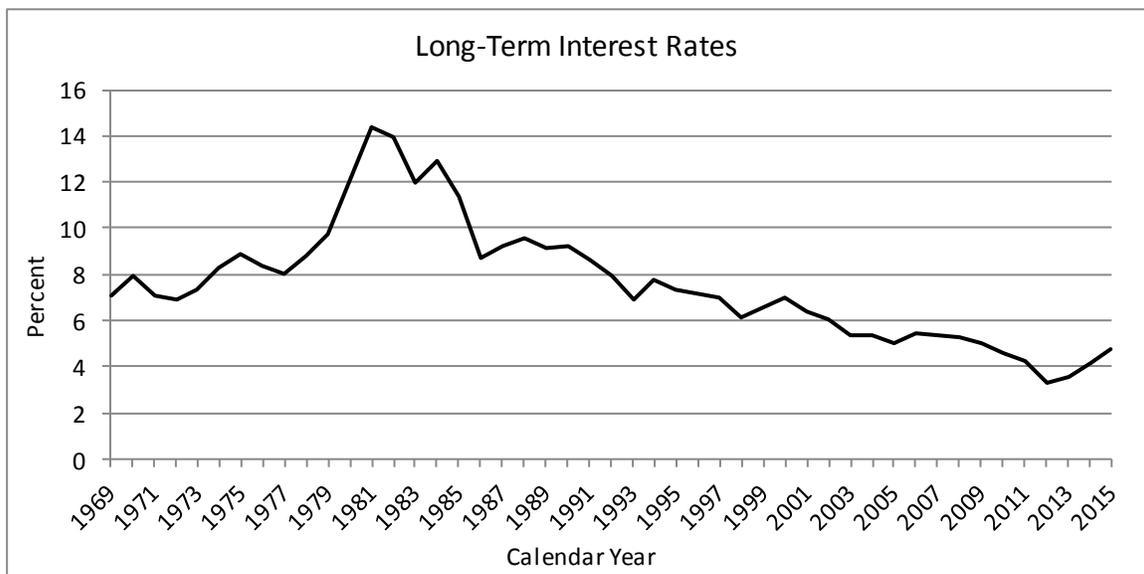

Interest Rates

A large portion of Montana's revenues is derived from investment earnings from trust accounts and daily invested cash. Interest rates also affect the amount of investment income that is reported on individual income tax returns. As such, interest rates are a significant assumption when estimating future state revenues.

In addition to the state revenue impact, interest rates are fundamental in understanding the climate in which consumers and businesses are likely to make investments and large purchases. While low interest rates produce less revenue for Montana's trust and interest holdings, higher income tax earnings might be expected as construction and sales activities increase.

Two types of interest rates, long and short-term, are estimated and used in determining future revenues. Both rates are an average across a selection of investment instruments. The forecast rates are obtained from IHS. Short-term rates are an average of 3-month corporate paper and 3 and 6-month T-bills. Long-term rates are an average of Corporate Aaa and Baa bonds, 10-year T bonds, and 30-year T bonds. The fiscal year computation of short-term interest rates reached unprecedented low rate of 0.1% in 2011. The future short-term interest rates are expected to remain low at 0.1% in 2013, 0.2% in 2014, and 0.5% in 2015. Long-term rates are expected to be 3.5% in 2013, 3.9% in 2014, and 4.5% in 2015.

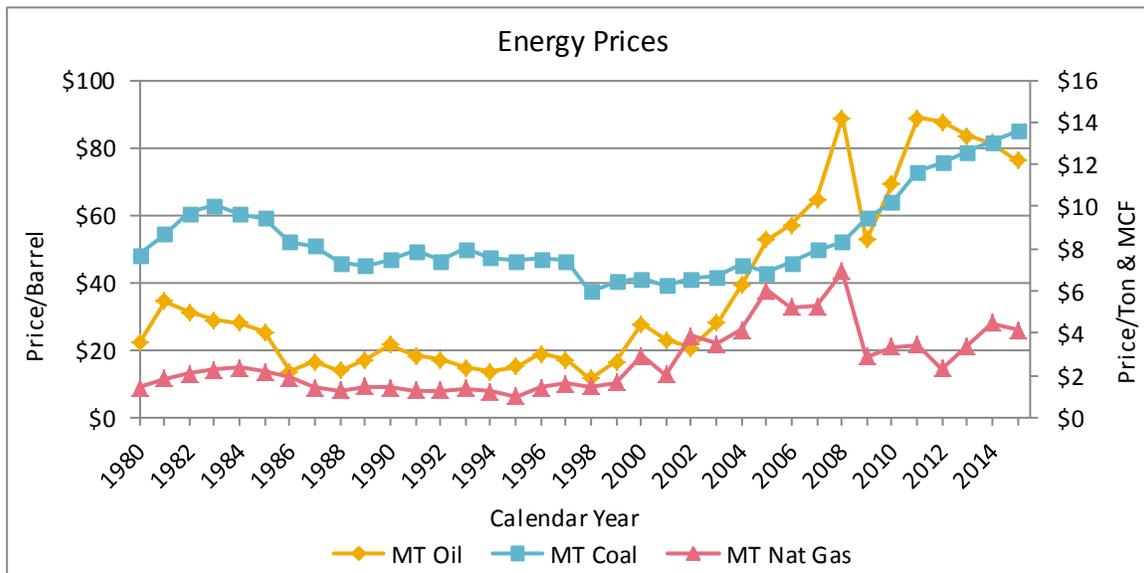

Energy Prices and Consumption

West Texas Intermediate (WTI) spot oil prices averaged \$25.96 per barrel in 2001 and increased every year through 2008. In 2009, the WTI price dropped by 38.1% to \$61.69 per barrel, and has subsequently increased to an estimated \$93.88 per barrel in 2012. IHS forecasts WTI oil prices to increase to \$89.45 in 2013, \$87.22 in 2014, and \$81.60 in 2015. Montana prices are expected to follow a similar trend.

Natural gas prices at the wellhead in the U.S. reached as high as \$8.84 per MCF in 2008, but the prices have declined significantly since then. The average price in 2012 is expected to be \$2.67 per MCF. IHS is forecasting average well head natural gas prices at \$3.91 in 2013, \$5.13 in 2014, and \$4.78 in 2015. While Montana wellhead prices are usually lower than the US average well head price, Montana prices are expected to follow a similar trend.

After a period of decline in oil production, from a peak in 1974 of 34 million barrels to a trough in 1999 of 15 million barrels, the discovery of new oil fields and advances in technologies increased oil production in Montana. In 2006, the new production hit a peak, with production of over 36 million barrels. Since 2006, oil production has declined but has stabilized at about 6 million barrels per quarter since the first quarter of 2011. That trend is expected to change with a modest improvement in total production through 2015. Montana oil production is expected to increase at an annual rate of about 0.6 million barrels per year to 25.7 million barrels in 2013, 26.3 million barrels in 2014, and 26.8 million barrels in 2015.

Natural gas production in Montana almost tripled between 1981 and 2007, from 40 million MCF to 119 million MCF. As in the oil market, new drilling activity was up substantially in 2003 and 2004, but production has started to drop and that trend is expected through 2015. Montana natural gas production is expected to be 68.4 million MCF in 2012, million MCF in 2013, 61.5 million MCF in 2014, and 55.1 million MCF in 2015.

HOW TO USE THIS REPORT

The following report is arranged into six main revenue sections. Each section contains revenue sources that share common characteristics, have many of the same assumptions, and have common estimating methodologies. The committee's time can be more efficiently used by considering those sources by section due to their commonalities. The main sections are:

1. Business Taxes
2. Natural Resource Taxes
3. Interest Earnings
4. Consumption
5. Property Taxes
6. Other General Fund Revenue

The sections are marked by divider pages that list each revenue source within that section. The sources are arranged alphabetically within each section. The report contains profiles of each revenue source estimated by the LFD staff. Twelve categories of information are provided for each source. These categories and a short description of each follow:

Revenue Description: A brief description of the source is provided including the origin of the revenue and, in the case of taxes and fees, the item that is taxed.

Statutory Reference: These are the citations from the Montana Code Annotated (MCA) applicable to the revenue source and include citations for the tax rate, the distribution, and when the tax is due.

Applicable Tax Rate(s): This section provides an explanation of the tax rate or license fee, more detail on the items that are taxed, and other information such as exemptions, minimums, initial versus annual fees, etc.

Distribution: This section explains how the revenue is distributed. In cases where uses or entities other than general fund receive a portion of the revenue, percentage distribution or the dollar amount is discussed. This section contains a simplified flow chart illustrating a simplified diagram of how the revenue received from the source is distributed in the state accounting system.

Collection Frequency: Timing of the revenue deposited in the state treasury may affect the revenue estimate. Revenue is usually received on a quarterly or monthly basis.

% of Total General Fund Revenue: To give the reader an idea of the importance of a particular revenue source, the percentage of total general fund revenue for FY 2004 - FY 2012 is included.

Revenue Estimate Methodology: A general description of the revenue estimating methods is provided followed by a more detailed explanation of the methodology used to derive assumptions for the revenue source. Methods differ between sources and may change each biennium depending on circumstances. Specific information on the type and source of the data used, analytical techniques, and any adjustments are also provided. Charts are included to show major assumptions.

Forecast Methodology: This section includes a simplified flow chart illustrating a simplified diagram of the methodology used to determine the revenue estimates.

Revenue Estimate Assumptions: In most cases, the data provided in these tables can be used in the formulas shown at the bottom of the tables in the "Forecast Methodology" to derive the revenue estimate. The tables show the revenue estimates for FY 2013, 2014, and 2015, the estimated general fund amount, and, if applicable, distributions to other funds or uses.

Revenue Projection: This section consists of a graph and accompanying data table. The line graph shows the amount of actual collections from FY 1989 and the projected amounts for FY 2013, 2014, and 2015. Total collections are depicted by a dark line while general fund collections are shown by a lighter line. The data table contains historic information about this data source since 1989 including: 1) actual total collections; 2) actual general fund collections; 3) projected total and general fund amounts for FY 2013, 2014, and 2015; and 4) the yearly percentage change in general fund.

Data Source(s): The various state agencies, federal agencies, companies, information systems, publications, fiscal notes, etc., that were consulted or reviewed in the estimation process are listed.

Contacts: The reader may contact these entities for more information about the revenue source.

Revenue Estimate Profile

Corporation License Tax

Revenue Description: The corporation license tax is a license fee levied against a corporation's net income earned in Montana. The corporation income tax is imposed on corporations that, for reasons of jurisdiction, are not taxable under a license tax. Factors that affect corporation license tax receipts include tax credits and the audit efforts by the Department of Revenue (DOR). As with individual income tax, all tax liability is adjusted for allowable credits.

Statutory Reference:

Tax Rate (MCA) – 15-31-121,

Tax Distribution (MCA) – 15-31-121

Date Due – by the 15th day of the fifth month following the close of the corporate fiscal year (15-31-111, 15-31-502). Estimated taxes due April 15th, June 15th, September 15th, and December 15th (15-31-502).

Applicable Tax Rate(s): The tax rate is 6.75%, except for corporations making a "water's edge" election (see 15-31-322, MCA), who pay a 7.0% tax on their net income.

Distribution: Beginning FY 2006, all corporation tax revenue is distributed to the general fund.

Distribution Chart:

Collection Frequency: Monthly, Quarterly, and Annually

% of Total General Fund Revenue:

FY 2004 – 4.90%	FY 2007 – 9.67%	FY 2010 – 5.40%
FY 2005 – 6.42%	FY 2008 – 8.17%	FY 2011 – 6.88%
FY 2006 – 9.00%	FY 2009 – 9.20%	FY 2012 – 6.83%

Revenue Estimate Methodology:

Data

The data used to develop the estimates for the corporation income tax are provided by DOR, the state accounting system (SABHRS), and IHS. The DOR provides corporation data from the corporation income tax return series that include total corporation income, Montana allocation information, and the Montana tax liability. The return series is dated information since corporations are allowed up to 10.5 months after the end of the tax year to file the return. The DOR also provides a series based on the tax payment data. This series provides more timely data and includes individual corporation payment by type (estimated, tentative, return, refund, and audit). SABHRS provides historic fiscal year data of total collections, current year payments, estimated payments, audits and penalty and interest, and refunds.

Analysis

The corporation license tax is highly volatile. Collection patterns show that current tax payments often originate in a previous year. Included in fiscal year data are late payments, audit payments, and refunds. The data often includes payment for tax periods more than 20 years in the past. These activities promote misinterpretation of how high, or low as the case may be, Montana corporate profitability is in any given tax year. A simple review of SABHRS data will not distinguish the many anomalies of the data, and may lead to the adoption of incorrect assumptions.

Legislative Fiscal Division

Revenue Estimate Profile

Corporation License Tax

DOR now requires industry sector information on the corporate tax returns. Significant work has been done to apply the new sector information to prior years' return data. The result is a sixteen-year history of income and tax liability for each sector. The historical tax liability of each sector is modeled against characteristic national or Montana-specific economic variables from IHS to produce a forecast of calendar year tax liability. As shown in the figure below, energy related sectors account for nearly half of total tax liability. The underlying volatility of the energy industry is a large contributor to the overall volatility of this tax source.

Assumptions

Each of the eleven sectors is listed below, followed by the average share of tax liability, a brief description of the sector, and the underlying economic variables used to develop the projection. The variables used to develop most of the projections are the average price of West Texas Intermediate Crude, GDP, the average number of housing starts in Montana, and the median existing home price in Montana. All variable projections are provided by IHS.

- Manufacturing (25%)—The manufacturing industry in Montana is highly correlated with energy prices and is therefore a relatively variable with respect to its aggregate tax liability. This sector is modeled on the average price of West Texas Intermediate Crude.
- Financial services (19%)—This sector includes banks, bank holding corporations, and companies involved in investment activities. Financial sector tax liability is modeled on median existing home prices in Montana.
- Wholesale and retail trade (13%)—This combined sector models well against Montana retail sales.
- Mining (9%)—The mining industry in Montana is heavily dependent on energy prices; it is modeled on the average price of West Texas Intermediate Crude.
- Professional and business services (8%)—The professional service sector comprises establishments that specialize in performing professional, scientific, and technical activities for others. The business service sector comprises establishments performing routine support activities for the day-to-day operations of other organizations. The combined sectors' tax liability is modeled on GDP.
- Transportation and warehousing (6%)—The transportation and warehousing sector includes industries providing transportation of passengers and cargo, warehousing and storage for goods, scenic and sightseeing transportation, and support activities related to modes of transportation. Its tax liability is modeled on median house price.

Legislative Fiscal Division

Revenue Estimate Profile

Corporation License Tax

- Information (4%)—The main components of this sector are the publishing industries, the motion picture and sound recording industries, the broadcasting industries, the telecommunications industries, and the information services industries. Its tax liability is modeled on the average number of housing starts per year.
- Utilities (3%)—The utilities sector includes establishments engaged in the provision of electric power, natural gas, steam supply, water supply, and sewage removal. The tax liability of this sector is modeled on the average number of housing starts per year.
- Agriculture (3%)—The tax liability of the agriculture sector is modeled on real GSP for agriculture.
- Social and educational services (2%)—This is a broad grouping of educational and health services, and arts, entertainment and recreation. The tax liability is modeled on GDP.
- Construction (2%)—The construction industry is the smallest contributor to corporation tax liability, likely because most construction companies are organized as S-corps or limited liability companies. Its tax liability is modeled on the average annual number of housing starts.

To develop the estimate for the corporation income tax, the sector growth rate is applied to the most recent tax year collections, 2010. The industrial sectors are then summed to provide an estimate for the tax year corporation tax liabilities. Because the industrial sector estimates are based on a tax year analysis, but are paid in a state fiscal year, payment timing must be taken into consideration. Analysis shows that the payments made in any given state fiscal year are made of the tax liability of the numerous previous tax years. Estimated tax payments made in the first half of the fiscal year are assumed to be payments for the liabilities of the previous tax year and payments in the second half of the fiscal year are assumed to be liabilities of the current tax year. Audits and refunds are generally assumed to be corrections to tax liabilities of the prior year. When calculated, the analysis suggests that 5% of the payments in the current fiscal year occur from liabilities of two years previous, 55% of the fiscal year payments are from tax liabilities of one year previous, and 40% of the payments are related to the current year's tax liability. When the percentages of each tax year are combined, the resulting value is adjusted by an average factor to produce the fiscal year corporate tax liability.

Adjustments

After the estimate for the fiscal year gross corporation tax liability is complete, several adjustments are required. The adjustments and the corresponding estimate process for each is described below.

- Refunds—After elevated levels in FY 2010 through FY 2012, refunds are projected to resume a more historical average based on the ratio to prior years' gross liability.
- Audits, penalties and interest—Audits, penalties and interest revenue are determined based on an average of past year ratios to gross fiscal year liability; these amounts included with the forecast gross tax liability in determining total fiscal year liability.
- Bonus depreciation—The bonus depreciation provisions of the Economic Stimulus Act of 2008 allows taxpayers to accelerate the depreciation on certain qualified property. The net effect is zero, but the timing of payments changes. The accelerated depreciation resulted in lower fiscal year payments in FY 2009 and FY 2010; the lingering effect is increased payments for each year in the forecast biennium.
- Insure Montana credit reimbursement—Beginning in FY 2010, the DOR adjusted the corporation tax account for the refund of the Insure Montana credit. As a result, the reimbursement will necessarily be shown as an adjustment in future years.
- Legislation impacts – any changes implemented by the 2011 Legislature that have yet to be fully implemented in the base year are added to future years.

Driver's License Fees

Revenue Description: A resident of Montana must have a valid driver's license to operate a motor vehicle on any highway in the state. A driver's license is issued only if the applicant passes specified examinations and pays fees. The fees are collected by Department of Justice, Motor Vehicle Division staff or county treasurers and are forwarded to the state treasurer for deposit. If collected by the county treasurers, a portion is retained by the county. The estimates shown in this source are net of revenue retained by the counties. The fees included in this source are from regular driver's licenses, commercial driver's licenses, motorcycle endorsements, duplicate driver's licenses, and renewal notices. Between October 1, 1995 and October 1, 1999, one-half of the licenses issued for those between the ages of 21 and 67 were 4-year licenses and one-half were 8-year licenses. Drivers outside these age brackets were assigned driver's licenses with terms which depend on how many years the driver was less than 21 or less than 75 years old. Between October 1, 1999 and July 1, 2005, all licenses for those 21-67 years of age were valid for 8 years. With the enactment of House Bill 192 by the 2005 Legislature, commercial licenses are valid for 5 years.

Statutory Reference:

Tax Rates (MCA) – Duplicate license (61-5-114), all others (61-5-111(6))

Tax Distribution (MCA) – 61-5-121

Date Due – upon application

Applicable Tax Rate(s):

 Driver's license fees are:

- driver's license, except a commercial driver's license - \$5.00 per year or fraction of a year
- motorcycle endorsement - \$0.50 per year or fraction of a year
- commercial driver's licenses (includes the basic license fee of \$5.00):
 - interstate - \$10.00 per year or fraction of a year
 - intrastate - \$8.50 per year or fraction of a year
- duplicate license - \$10.00
- renewal notice - \$0.50

Distribution: The distribution of license fee revenue varies by the type of license and who collects the fee. The table shows the current statutory distribution. Note that the portion allocated to counties applies only when the county collects the fee. Otherwise, the county allocation is added to the general fund distribution.

Distribution of Driver's License Fees

FY 2006 – 0.22%	FY 2009 – 0.19%	FY 2012 – 0.23%

Revenue Estimate Methodology:

The driver's license revenue estimate is based on the number of the six various licenses/fees, multiplied by the applicable fee. The number of licenses is modeled on Montana driving age population.

Data

There are six different sources of revenue—five different driver's licenses and the renewal notice. The best source of data for the number of licenses and the renewal notice is contained in the history of revenue collections for each of these six items from the state accounting system (SABHRS).

Analysis

The methodology used to determine the number of each license/fee differs slightly:

1. The proxy numbers for driver's and motorcycle licenses are obtained by multiplying the driving age population estimate for each year by the last known actual ratio of driver's licenses to driving age population. This ratio differs between odd and even years, and is applied accordingly.
2. For duplicate licenses, the proxy number is derived by multiplying the number of driver's licenses by the previous year's ratio between the number of duplicates and drivers licenses. Because the driver's license proxy includes the effects of population change, these effects are also included in the proxy for duplicate licenses.
3. The proxies for the number of interstate and intrastate licenses are the amounts from the last known fiscal year.
4. To approximate the number of renewal notices, the ratio between the previous years' number of notices to the

Legislative Fiscal Division

Revenue Estimate Profile

Driver's License Fees

proxy number of licenses is multiplied by the estimated number of licenses. Since the license proxy includes the effects of population change, these effects are also included in the proxy for renewal notices.

- Based on historical percentages, amounts retained by the counties are calculated and subtracted from the total revenue to derive the state's portion.

Adjustments and Distribution

Once the proxy number for each license has been estimated, adjustments, if any, are made. After any adjustments, the applicable distribution percentage of the revenue for each license fee is applied (see the "Distribution" section).

Estate Tax

Revenue Description: Since 1980, revenues from inheritance taxes have fluctuated because of federal and state law changes, changes in wealth, changes in the death rate of the population, accounting procedures, and the processing of large estates. Due to passage of Legislative Referendum 116 by the electorate in November 2000, the state inheritance tax was repealed. The tax had been imposed on the transfer of any decedent's property, interest in property, or income from property within the state, to any other person or corporation except a surviving spouse, child or lineal descendant, stepchild, or governmental or charitable organization. Although the referendum was effective immediately, it applied to deaths occurring after December 31, 2000. Thus, inheritance tax revenue will continue to produce revenue, but the amount of revenue will decrease each year. In addition to the inheritance tax, the state receives a credit from the federal estate tax based on the value of Montana property transferred to estates at the time of death. The Montana estate tax is equal to the maximum estate tax credit allowed under federal estate tax law.

Congress passed the Economic Growth and Tax Relief Reconciliation Act of 2001 (EGTRRA) which scheduled a step down approach to the repeal of the federal estate tax. Provisions of the act included the elimination of the state estate tax credit, the source of Montana's estate tax revenue. The estate tax credit of those who died in 2002, 2003, and 2004 was reduced by 25% per each year until 2005 when the credit equaled zero. Many years may pass before the time that estates are finally settled and the taxes of the estates are paid, and estate tax revenues collected by the state are expected to become insignificant.

The Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010 reinstated federal estate taxes for 2011 and 2012, but did not reinstate the state estate tax credit. For these years, the federal estate tax exemption will be \$5 million and the estate tax rate for estates valued over this amount will be 35%; however, because the state credit was not continued, Montana will not receive any increase in revenues.

Statutory Reference:

Tax Rate (MCA) – 72-16-905
Tax Distribution (MCA) – 17-2-124(2), 72-16-1003
Date Due – 18 months after death (72-16-909)

Applicable Tax Rate(s): The estate tax is equal to the maximum estate tax credit allowed under federal estate tax law.

Distribution: All proceeds are deposited into the general fund.

Revenue Estimate Profile

Estate Tax

Revenue Estimate Methodology:

Changes to the Federal Estate Tax

The provisions of the Economic Growth and Tax Relief Reconciliation Act of 2001 (EGTRRA) were designed to be temporary unless Congress took action to extend the tax revisions. The Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010 reinstated federal estate taxes for 2011 and 2012, but did not reinstate the state estate tax credit. For these years, the federal estate tax exemption will be \$5 million and the estate tax rate for estates valued over this amount will be 35%; however, because the state credit was not continued, Montana will not receive any increase in revenues.

Data

The Department of Revenue (DOR) data provides the details of fiscal year tax filers on individual estates, and the state accounting system (SABHRS) SABHRS data provides aggregate historic collections of the estate tax. The DOR data is separated based on the individual's year of death since the estate tax laws are imposed based on the year of death. Next, all new and prior year data is combined by year of death, and that data is sorted based on total tax payment.

Analysis

Because the state credit to the federal estate tax was effectively eliminated in 2005, no recent data exists and the estimates are based on data from 2002, the year that most closely mirrored the pre-EGTRRA tax provisions. The Tax Relief Act of 2010 changed the exemptions on the decedent's taxable estate value to be \$5 million and the top tax rate for taxable estates will be 35%.

Future collections of the estate tax are developed with a complex system of averaging. First, a ratio of taxpayers to deaths is created. The product of that ratio is then adjusted in recognition of the changes in the laws governing the "death" taxes. Next, the average tax paid by taxpayer is calculated. When those quantities are multiplied, the result is the expected estate taxes for the given year of death. The figure above shows the number of taxpayers and the average tax as calculated with this methodology.

Finally, payments of the estate tax are distributed across the years based on federal tax provisions which require the estate tax to be filed within 9 months of death. A six month extension is available on the taxpayers request, however the Internal Revenue Service requires the requesting estates to estimate the tax due and pay the estimated amount.

Due to the Tax Relief Act of 2010 exclusion of the state tax credit provisions of the federal estate tax, no estate tax estimate has been included in the forecast period.

Revenue Estimate Profile

Individual Income Tax

Revenue Description: The tax is levied against taxable income, which is defined as Montana personal income adjusted for exemptions and deductions. Once tax liability is determined, the amount of tax due is computed by subtracting allowable credits.

Statutory Reference:

Tax Rate (MCA) – 15-30-2103, 15-30-2104, 15-30-2105

Tax Distribution (MCA) – 17-2-124(2)

Date Due – 15th day of the fourth month of the filer’s fiscal year (15-30-2604). Withholding taxes are due monthly, quarterly, or on an accelerated schedule depending on income (15-30-2504). Estimated taxes are due on the 15th day of the 4th, 6th, and 9th month and the month following the close of the tax year.

Applicable Tax Rate(s): Tax rates vary from 1.0% to 6.9%, depending on the level of taxable income. Tax brackets, personal exemption amounts, and the standard deduction are adjusted for inflation each year. SB 407, enacted by the 2003 Legislature, created a new capital gains income tax credit. As a result, the tax rate on capital gains income was less than the tax rate on ordinary income by 1% in tax years 2005 and 2006, and by 2% in tax year 2007 and beyond.

Distribution: All proceeds are deposited into the general fund.

Distribution Chart:

Collection Frequency: Withholding and estimated taxes are collected monthly, bi-weekly, and weekly.

% of Total General Fund Revenue:

FY 2004 – 43.82%	FY 2007 – 45.04%	FY 2010 – 44.12%
FY 2005 – 46.13%	FY 2008 – 44.17%	FY 2011 – 45.78%
FY 2006 – 45.01%	FY 2009 – 45.09%	FY 2012 – 48.04%

Revenue Estimate Methodology:

Data

There are three kinds of data required to make forecasts of individual income tax revenue: historical individual income tax return data; state and national historical data on income, inflation, employment, and other economic variables; and forecasts of economic activity that determine income and deductions.

Actual individual income tax return data is supplied annually by the Department of Revenue (DOR). This data is usually available in November and is for the prior tax year. It includes line-by-line tax return information for each state income taxpayer (except those that have been removed because of the existence of certain federal information).

The historical information on type of income, inflation rates, employment and other economic variables is available from individual income tax returns, Bureau of Economic Analysis, Bureau of Labor Statistics, IHS and MA.

IHS provides forecasts of a wide variety of state and national economic variables that are used to assess overall state and national economic activity. These data are used to produce future growth rates for each income and deduction item, as explained in the methodology section below.

Legislative Fiscal Division

Revenue Estimate Profile

Individual Income Tax

Analysis

An individual income tax simulation model is used to forecast Montana calendar year individual income tax liability for all residents. These forecasts are converted to fiscal year liability and are adjusted for audits, legislative impacts and one-time events. The model includes the effects of SB 407, which changed the individual income tax system in Montana and was passed by the 2003 legislature. This legislation collapsed 10 tax brackets with a top tax rate of 11% into a system of 7 tax brackets with a top rate of 6.9%, and limited the deductibility of federal taxes paid to \$5,000 for single taxpayers and \$10,000 for married taxpayers.

The calendar year state tax liability forecast is developed by applying growth rates to each resident taxpayer's income and deduction items. The latest year for which tax return data is available is tax year 2011; therefore, growth rates must be formulated for tax years 2012 through 2015 and applied to each taxpayer's 2011 tax return data. The result is a forecast of calendar year state individual income tax liability for each resident, the sum of which produces a statewide forecast of individual income tax liability for each year.

The statewide forecast of resident liability is multiplied by an all-filers percentage to include the tax liability for nonresidents and partial-year residents. In tax year 2011, the tax liability of nonresidents and part-time residents amounted to 7.3% of resident filers' liability. Next, the all-filers calendar year tax liability is adjusted by the expected growth in the number of taxpayers. This results in a forecast of total calendar year individual income tax liability before credits. An estimate of allowable credits is deducted, producing a calendar year individual income tax liability for each future year.

Fiscal Year Conversion

The calendar year liabilities are converted to fiscal year liabilities by summing 50% of the prior calendar year's liability with 50% of the current calendar year tax liability.

Audits and Other Assumptions

After fiscal year liabilities are determined, growth rates between fiscal years are calculated; these growth rates are applied to the base year (FY 2012) collections of individual income tax to produce forecasted collections before audits and other adjustments. Projected audit revenue and any other adjustments are added in, resulting in total fiscal year collections. The table below summarizes these assumptions:

Audit and Other Assumptions (Millions)			
	Fiscal Year		
	2013	2014	2015
Audits, Penalties and Interest	\$36.049	\$36.734	\$37.245
Legislation Impacts	(2.064)	(1.473)	(1.033)

Revenue Estimate Profile

Insurance Tax & License Fees

Revenue Description: The insurance premiums tax is levied on the net premiums or gross underwriting profit for each insurance company operating in Montana. Various insurance and license fees are also collected.

Statutory Reference:

- Tax Rate (MCA) – 33-2-705(2), 33-2-311, 33-28-201(1&2), 50-3-109(1)
- Fee Rate (MCA) – 33-2-708(1&2), 33-14-201(2), 33-2-712, 33-38-105
- Tax Distribution (MCA) – 33-2-708(3), 33-2-712, 50-3-109(1), 33-28-120
- Date Due – March 1st each year (33-2-705(1), 33-2-712, 33-28-201(1&2)). Quarterly payments due the 15th of April, June, September, and December (Administrative Rules 6.6.2704, 6.6.2705)

Applicable Tax Rate(s): The current tax rate is 2.75% of net premiums (including cancellation and return premiums) on policies sold in Montana. In addition to this tax, there is a 2.5 % tax on the fire portion of net premiums for selected risks. Beginning FY 2008 with the enactment of HB 278 (2007 session), for each Montana resident insured under any individual or group disability or health insurance policy, all insurers are required to pay \$1.00 to the State Insurance Commissioner. The fee had been scheduled to be reduced to \$0.70, but the legislation extended the \$1.00 fee indefinitely. This fee is deposited to the state special revenue fund and used to fund the statewide genetics program established in statute (50-19-211, MCA). Senate Bill 132 (passed by the 1999 legislature) eliminated many disparate fees on insurance companies, which had partially been deposited into the general fund, and replaced them with a single company annual fee of \$1,900. Revenue from this fee is deposited to the state special revenue fund for administration of insurance activities. The following lists various insurance related fees. Captive insurance companies are taxed 0.4% on the first \$20 million of net direct premiums and 0.3% on each subsequent dollar collected. The annual \$5,000 minimum tax is prorated based on the quarter in which the company is first licensed.

Distribution: With the approval of Initiative 155 by the electorate in November 2008, 67% of insurance tax proceeds from the tax on surplus lines premiums and net premiums have been deposited into the general fund. The remaining 33% of revenue have been deposited to the state special revenue to expand the children health insurance program and Medicaid eligibility of uninsured children. HB 676 enacted by the 2009 Legislature temporarily changed the 33% distribution to 16.67% for the 2011 and 2013 biennia with 83.33% deposited to the general fund. Beginning FY 2014 the distribution will again be 33% with 67% deposited to the general fund. All fire insurance premiums are deposited to the general fund. Due to enactment of SB 161 by the 2007 Legislature, 5% of premium tax revenue from captive insurance company and all fees and assessments on captive insurance companies are deposited to a state special revenue fund to be used to administer captive insurance captive insurance company statutes and reimburse expenses incurred in promoting captive insurance in Montana. The other 95% of captive insurance premium tax revenue is deposited to the general fund. License fees and the 1% stamping fee on surplus lines insurance premiums are deposited into the state special revenue fund for use by the State Auditor. Beginning October 2005, the genetic fee revenue is deposited to the state special revenue fund.

Legislative Fiscal Division

Revenue Estimate Profile

Insurance Tax & License Fees

Distribution Chart:

Collection Frequency: Quarterly and annually

% of Total General Fund Revenue:

FY 2004 – 4.11%	FY 2007 – 3.33%	FY 2010 – 3.37%
FY 2005 – 3.74%	FY 2008 – 3.26%	FY 2011 – 3.25%
FY 2006 – 3.44%	FY 2009 – 2.77%	FY 2012 – 3.15%

Revenue Estimate Methodology:

Most insurance tax and license fee revenue is from premium taxes with minor amounts from various fees. Estimates are made for these components based on measures of growth and then summed. This total is reduced by estimates of refunds and guarantee offsets. Guarantees are amounts that members of the Montana comprehensive health associations are required to pay into a reserve account (up to 1% of the total disability insurance premium received from Montana residents). The amount of these payments reduces (offsets) premium tax liabilities dollar for dollar (33-22-1513(7), MCA).

Data

The state accounting system (SABHRS) provides historical collection data for insurance premium taxes, genetics program fees, and various general fund and state special revenue fees. The State Auditor’s Office provides historical data and future estimates of offsets and refunds.

Analysis

Because offsets and refunds can vary substantially, they are added to the amounts shown on the state accounting system to more accurately reflect total taxes. Total premium taxes are modeled against long-term interest rates, housing starts and the S & P 500 index.

Legislative Fiscal Division

Revenue Estimate Profile

Insurance Tax & License Fees

From the estimated amounts, offsets and refunds as estimated by the State Auditor’s Office are subtracted to produce the amount of net premium taxes expected to be received by the state. If no better information is available, the estimates for the other components such as genetics program fees, general fund fees, and state special revenue fees are a continuation of the last known fiscal year amounts.

Adjustments and Distribution

Once each component has been estimated adjustments, if any, are made. Since each component is estimated separately and each goes to either the general fund or the state special revenue fund, the distribution of the revenue has already been done.

Investment License Fee

Revenue Description: Investment advisors and investment companies pay fees to the state for registration of securities and agents, registration of securities by notification, notice of a federal filing of a federally secured security, and name changes.

Statutory Reference:

Fee Rate (MCA) – 30-10-209, 30-10-904

Fee Distribution (MCA) – excess to general fund (30-10-115), 30-10-209(6), portfolio notice fee (30-10-209(1d)), 30-10-210(2), 30-10-907

Date Due (Regulation of dealers) – initial (upon registration), annual (prior to December 31st) (30-10-201 (9&11)

Date Due (Regulation of securities) – upon registration (30-10-206(3c), valid for one year (30-10-209(1b)), renewal (prior to termination date):

Applicable Tax Rate(s): Initial and annual security registration fees vary based on the offering price of securities, but cannot be less than \$200 or more than \$1,000. Initial and annual registration fees for a broker-dealer, investment adviser, and federal covered adviser are \$200. Initial and annual registration fees for a salesperson or investment adviser are \$50. The fee for name changes to series, portfolio, or a subdivision of an investment company is \$50. More details on the fees are provided below.

Portfolio notice filing - Late amended registration 0.3%, min of \$600 & max of \$3,000	3,000	30-10-209	

Distribution: All fees except portfolio notice filing fees and examination charges are deposited to the general fund. Portfolio notice filing fees and examination charges are deposited in a state special revenue account from which the State Auditor pays for expenses associated with the regulation of portfolio activities. The excess in this account is transferred to the general fund throughout the year as a non-budgeted transfer and is shown under the “All Other” revenue category.

Legislative Fiscal Division

Revenue Estimate Profile

Investment License Fee

Distribution Chart:

Collection Frequency: Varies

% of Total General Fund Revenue:

FY 2004 – 0.35%	FY 2007 – 0.33%	FY 2010 – 0.38%
FY 2005 – 0.34%	FY 2008 – 0.33%	FY 2011 – 0.39%
FY 2006 – 0.33%	FY 2009 – 0.36%	FY 2012 – 0.37%

Revenue Estimate Methodology: Investment license fee revenue is obtained from two major sources: portfolio notice filing and examination fees (state special revenue), and many other varied fees (general fund). The portfolio notice filing fees, examination fees, and other permit revenue are estimated separately and then summed.

Data

The state accounting system (SABHRS) provides historical collection data for the state special revenue portfolio notice filing fees, as well as revenue from examination fee and fees distributed to the general fund. The State Auditor’s Office provides revenue estimates of the general fund and examination fees in its biennial budget submission for the forecast period. Also provided in the budget submission are requested appropriations for the portfolio regulatory program that are needed to determine the transfer amount of portfolio notice filing and examination fee revenue to the general fund.

Analysis

The portfolio notice filing fee and the licenses and permits are both modeled on the S&P 500 Index.

Legislative Fiscal Division

Revenue Estimate Profile

Investment License Fee

Adjustments and Distribution

Since the general fund and the state special revenue component are estimated under separate methodologies, the distribution of the revenue has already been done. However, there is a further distribution of the portfolio notice filing and examination fee revenue after it is in the state special revenue fund. Once there, the revenue is reduced by estimates of the appropriations required by the State Auditor's Office to regulate portfolio activities. The remaining amount of the fee revenue is then transferred to the general fund. The general fund transfer amounts are not shown in this revenue source, but are shown in the "All Other" revenue source.

Lodging Taxes

Revenue Description: The state imposes two taxes on room charges collected by lodging facilities and campgrounds: a lodging sales tax and a lodging facility use tax. The taxes only apply for rooms used for lodging.

The 3% lodging sales tax began June 1, 2003 and applies to hotels, motels, campgrounds, resorts, dormitories, condominium inns, dude ranches, guest ranches, hostels, public lodging houses, and bed and breakfast facilities. Exempt are facilities for health care, facilities owned by non-profit corporations for use by youth for camping, facilities whose average daily charge is less than 60% of the amount the state of Montana reimburses for lodging, and facilities rented for 30 days or more. Sales to the U.S. government are also exempt from the sales tax. All facilities subject to the tax must obtain a seller's permit before engaging in business subject to the sales tax within Montana. The vendor must pay the tax due by the last day of the month following a calendar quarter. Vendors are allowed to claim and keep 5% of the tax as an allowance, not to exceed \$1,000 a quarter. The Department of Revenue may require a retailer to post security up to twice the average tax liability to be used to recover taxes, interest, and penalties owed.

The 4% lodging facility use tax applies to facilities containing individual sleeping rooms or suites, providing overnight lodging for periods of less than 30 days to the general public for compensation. This includes hotels, motels, campgrounds, resorts, dormitories, condominium inns, dude ranches, guest ranches, hostels, public lodging houses, or bed and breakfasts. Exempt are non-profit or religious corporation facilities used primarily by youth for camping, facilities whose average daily charge does not exceed 60% of the amount the state of Montana reimburses for lodging, and facilities rented for 30 days or more. All facilities must be registered with the Department of Revenue. Due to enactment of HB 111 in the 2011 session, 30% of taxes paid by state employees are deposited to the general fund. Taxes paid by federal funds are deposited to the general fund and reimbursed to the federal government from the general fund through the statutory appropriation in 17-3-106. The remainder of taxes paid by state employees is distributed under current allocations. The 30% returned to the general fund is shown in the "All Other Revenue" profile.

Statutory Reference:

Tax Rate (MCA) – 15-65-111 ([lodging facility use tax](#)), 15-68-102 ([lodging sales tax](#))

Tax Distribution (MCA) – 15-65-121 ([lodging facility use tax](#)), 15-68-820 ([lodging sales tax](#))

Date Due – [Lodging facility use tax](#) is due before the end of calendar quarter (15-65-112). The [lodging sales tax](#) is due the last day of the month following the calendar quarter (15-68-502(1)).

Applicable Tax Rate(s): The lodging sales tax is 3.0% of the sales price. The lodging facility use tax is 4.0% of room charges.

Distribution:

1. Sales Tax: 100% general fund
2. Lodging Facility Use Tax: The revenue is first distributed as follows: the Department of Revenue in the amount appropriated for collection and disbursement costs; 30% of the taxes paid by state employees to the general fund (taxes paid with federal funds are reimbursed to the federal government from the general fund); \$400,000 to the Montana heritage preservation and development fund which is statutorily appropriated for restoring and maintaining historic properties; and 2.6% to the historical interpretation account. After these distributions, the remainder is distributed and statutorily appropriated:
 - 67.5% to the Department of Commerce for tourism promotion and promotion of the state as a location for the production of motion pictures and television commercials.
 - 22.5% to regional nonprofit tourism corporations.
 - 6.5% to the Department of Fish, Wildlife and Parks for maintenance of state park facilities.
 - 2.5% to the university system for the establishment and maintenance of a Montana travel research program.
 - 1.0% to the Montana Historical Society to install and maintain roadside historical signs and historic sites.

Legislative Fiscal Division

Revenue Estimate Profile

Lodging Taxes

Distribution Chart:

Collection Frequency: The owner of a facility collects the tax and remits it quarterly to the Department of Revenue.

% of Total General Fund Revenue:

A small portion for reimbursement of lodging facility taxes paid by state employees is included in “All Other General Fund Revenue”

FY 2004 – 0.67%	FY 2007 – 0.70%	FY 2010 – 0.76%
FY 2005 – 0.67%	FY 2008 – 0.68%	FY 2011 – 0.80%
FY 2006 – 0.63%	FY 2009 – 0.69%	FY 2012 – 0.83%

Revenue Estimate Methodology:

Data

Data from the state accounting system (SABHRS) is used to prepare the estimate for the two lodging facility taxes. Additional data, such as the consumer price index projections, provided by the IHS, and non-residential tourism expenditures, provided by the Institute for Tourism and Recreation Research, is used to evaluate the results of the methodology.

Total lodging taxes are made up of two separate taxes, the lodging facility use tax, which is deposited into state special revenue accounts to fund state tourism activities, and the lodging sales tax, which is deposited into the general fund. The same base, in the form of a proxy for taxable room charges, is used as the starting point both sources, and both taxes are estimated using a single proxy of the taxable room charges in Montana.

Analysis

The proxy of lodging taxes is modeled on Montana retail sales and then reduced by a ratio to account for the difference apparent in the taxable room receipts of the lodging facility use tax and lodging sales tax. Estimates of taxable room charges are multiplied by the corresponding tax rate and summed to produce the total lodging tax estimate.

Legislative Fiscal Division

Revenue Estimate Profile

Lodging Taxes

Adjustments

A portion of the collections is distributed to the DOR to cover the expenses associated with administration of the tax. Of the taxes paid by state employees who stay in lodging facilities in connection with their jobs, 30% is distributed to the general fund. Taxes paid by employees with federal funds are reimbursed to the federal government. After the gross lodging facility use tax estimates are adjusted, the remainder of the revenues is distributed to the statutorily designated agencies.

Revenue Estimate Profile

Motor Vehicle Fee

Revenue Description: The state assesses a variety of motor vehicle fees, including fees for the filing of motor vehicle liens, fees for new license plates, title fees, and annual and permanent registration fees. The fees vary according to the type of vehicle and the type of license plate. There are also Gross Vehicle Weight (GVW) fees on trucks and pickups, special fees for senior citizen transportation, veteran services, the highway patrol pension fund, salaries for the highway patrol, motorcycle safety, electronic commerce applications, and an optional \$4 registration fee on light vehicles for state parks and fishing access sites.

Effective January 1, 2004, all fees on motorcycles and quadricycles, trailers, travel trailers, snowmobiles, off-highway vehicles, and watercraft are one-time only and permanent, except upon change of ownership. Fees on other vehicles are annual. Light vehicles older than ten years old may be licensed permanently, at the option of the owner. New license plate fees increased from \$2 to \$5. The registration fees on campers and pontoons and rubber rafts are eliminated. Beginning January 1, 2005, the registration fees on all light vehicles increased, as did permanent fees on recreational trailers, off-highway vehicles, snowmobiles, recreational vehicles, and motorcycles. Beginning January 2006, motor homes 11 years or older may be permanently registered and the registration fee for certain vehicles increased \$5 to fund Highway Patrol salaries.

Due to changes enacted by HB 671 and SB 285 by the 2005 Legislature, registration fee revenue reported by counties on the county collection report are now being recorded as vehicle taxes. Therefore, revenue shown for this source shows a large decline in FY 2006 from FY 2005, but revenue increases by a like amount in the "Vehicle Tax" revenue source. Due to enactment of HB 90 by the 2007 Legislature, lien filing fee increases are extended through June 2016 and certificate of title fee increases are extended through June 2018. SB 508 enacted by the 2009 Legislature created an online vehicle insurance verification system funded by new fees, increased existing fees, and earmarking of existing fees.

Statutory Reference:

Tax Fee rate – multiple, but generally in Title 61, chapter 3. Permanent registration 61-3-562

Tax Distribution (MCA) – all fees in Title 61 are distributed to the general fund unless stated otherwise (61-3-108)

Applicable Tax Rate(s): Various

Distribution: Most motor vehicle fees are allocated to the general fund. The following fees are distributed to the Motor Vehicle Information Technology Systems state special revenue account: \$4 of the \$8 recording lien fee (including boats, snowmobiles, and off highway vehicles); \$5.00 of the \$10.00 certificate of ownership fees for watercraft, snowmobiles, off-highway vehicles and all other vehicles; \$5.00 of the \$10.00 duplicate certificate of ownership fee; and the \$10.00 fee for the issuance of a new certificate of title following the release of a lien. Other distributions to other state special revenue accounts (and county general fund) are: \$10 of the \$30 donation fee for collegiate license plates to the student academic scholarship fund or foundation of the named institution; the annual donation fee of \$20 for motorcycle or quadricycles specialty license plates for grants to chronically or critically ill children; \$5 of the \$15 administrative fee for generic specialty license plates to the county general fund; the \$15 surcharge for sponsoring a generic patriotic license plate for the construction, maintenance, operation, and administration of state veterans' cemeteries; and the optional \$4 fee for parks. With the enactment of HB 671 by the 2005 Legislature, revenue from the newly enacted temporary registration fees of \$3 and \$8 are deposited in a non-budgeted enterprise fund. SB 508 enacted by the 2009 Legislature created an online vehicle insurance verification system funded by new fees, increased existing fees, and earmarking of existing fees.

Legislative Fiscal Division

Revenue Estimate Profile

Motor Vehicle Fee

Distribution Chart:

Collection Frequency: The various fees are generally collected on a monthly basis.

% of Total General Fund Revenue:

FY 2004 – 2.22%	FY 2007 – 1.03%	FY 2010 – 0.88%
FY 2005 – 2.00%	FY 2008 – 1.07%	FY 2011 – 0.83%
FY 2006 – 1.24%	FY 2009 – 0.85%	FY 2012 – 0.86%

Revenue Estimate Methodology:

Data

The data used to estimate the motor vehicle (MV) fees are obtained from the state accounting system (SABHRS) and IHS.

Analysis

MV fees are currently imposed at different rates on eight major categories. Included in the fees assessed on motor vehicles in Montana are registration fees, two types of record liens, title fees, personal and new plate fees, senior transit fees, and veteran’s administration fees. The ninth category is made up of other miscellaneous fees assessed on motor vehicles. As shown in the figure below, the collection of motor vehicle fees has been highly variable since FY 2000. The figure below also shows the impact of the reduction and subsequent change in classifying vehicle registration fee revenue as vehicle tax revenue in FY 2006 and FY 2007. This change in the vehicle registration fees is the combined impact of SB 285 and HB 671, both implemented in the 2005 session. However, since registration fee revenues are now recorded as vehicle taxes, the net change to total revenues is zero.

Legislative Fiscal Division

Revenue Estimate Profile

Motor Vehicle Fee

With constant fees, the future change in MV fees results from change in the vehicle stock in Montana. Because fee payments are directly connected to the number of vehicles in the state, estimates for the MV fees are made by applying estimated growth rates to the previous year revenue. Growth rates for the stock of Montana vehicles are modeled on IHS estimates for the national and Montana-specific vehicle stock and new car sales nationwide. The growth rate is applied to the base year revenues of each fee category and projected forward at the same rate for all estimated fiscal years. The estimated tax collections of each category are then combined to create the total estimates for the MV fees.

Adjustments

For the current estimates, no adjustments are required.

Public Contractors Tax

Revenue Description: Contractors or subcontractors submitting a proposal to perform construction work in Montana for the federal government, state government, or any political subdivision must be licensed as a public contractor. A license is not required in order to bid on contracts in which federal aid is used for highway construction, but is required once the bid is awarded.

Statutory Reference:

Tax Rate (MCA) – 15-50-205

Tax Distribution (MCA) – 15-50-311

Date Due – within 30 days after payment to the contractor (15-50-309)

Applicable Tax Rate(s): A 1.0% license fee is applied to the gross receipts of each separate project let by any of the listed public entities. However, a credit (in the form of a refund) against the license fee is allowed for personal property taxes and certain motor vehicle fees paid in Montana on personal property or vehicles used in the business of the contractor. In addition, the amount of the net license fee paid (gross less the property tax refund) may be used as a credit on the contractor's corporate or individual tax return. Overpayments are also refunded.

Distribution: All public contractor tax revenue is deposited into the general fund.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue:

FY 2004 – 0.15%

FY 2007 – 0.30%

FY 2010 – 0.43%

FY 2005 – 0.09%

FY 2008 – 0.26%

FY 2011 – 0.38%

FY 2006 – 0.25%

FY 2009 – 0.33%

FY 2012 – (0.16%)

Revenue Estimate Methodology:

Data

Total fiscal year tax collections are obtained from the state accounting system (SABHRS), estimates of highway contracts for future biennia are provided by the Department of Transportation (DOT), and actual credits and refunds paid in each fiscal year are available from the Department of Revenue (DOR).

A proxy for gross tax collections is developed by adjusting the SABHRS total collection data to account for the reductions of refunds and credits. The gross tax data is then disaggregated into two contract classifications, highway and all other contracts. Highway contracts typically account for about 38% of the gross tax collections.

Legislative Fiscal Division

Revenue Estimate Profile

Public Contractors Tax

The remainder of the gross collections can be credited to other types of contracts. These contracts include forestry, bridge construction, and public building projects. The figure above shows both the aggregated and disaggregated Montana public contract values and a trend line illustrating the moderate rate of growth inherent in the aggregated public contracts, approximately 4.6% annually.

Public contractor's tax revenue has been highly variable due to inconsistencies in processing payment of refunds and credits, as shown in the figure below.

Refunds are made up primarily of refund claims against the class 8-business property tax. Changes in the property tax rate, such as in FY 2000 when the rate was reduced from 6% to 3%, affect the amount of refunds. Credits are authorized for both individual income tax and the corporation license tax.

Legislative Fiscal Division

Revenue Estimate Profile

Public Contractors Tax

Analysis

The forecast value of all contracts other than DOT contracts is based on a historical average. This estimate is added to the estimate of highway contracts provided by DOT and multiplied by 1% to obtain the gross tax revenue. Gross taxes are reduced by an aggregate forecast of refunds and credits to produce net tax collections.

Railroad Car Tax

Revenue Description: All railroad property is subject to taxation as defined in the federal Railroad Revitalization and Regulatory Reform Act of 1976. The Railroad car tax applies to the rolling stock owned by railroad companies. The railroad car tax rate the average property tax rate for commercial and industrial property. Railroad car companies, which operate in several states, pay taxes on the portion of the property value allocated to Montana, based on the ratio of the car miles traveled within Montana to the total number of car miles traveled in all states, as well as time spent in the state relative to time spent in other states.

Statutory Reference:

Tax Rate (MCA) - 15-23-214(1)

Tax Distribution (MCA) – 15-23-215

Date Due – Report due to the Department of Revenue April 15th of each year for the previous calendar year (15-23-103(2), 15-23-212). The department calculates the tax due by the third Monday in October (15-23-214(1)).

One-half of the tax is due by November 30th and one-half is due by May 31st (15-23-214(3), 15-16-102(1)).

Applicable Tax Rate(s): The tax rate is equal to the previous year's average statewide tax rate for commercial and industrial property. This is multiplied by the statewide average mill levy for commercial and industrial property. The most current tax year rates are:

FY 2004 – 3.88%	FY 2007 – 3.55%	FY 2010 – 3.40%
FY 2005 – 3.81%	FY 2008 – 3.52%	FY 2011 – 3.40%
FY 2006 – 3.74%	FY 2009 – 3.44%	FY 2012 – 3.50%

Distribution: All revenue from this tax is deposited into the general fund.

Distribution Chart:

Collection Frequency: Semi-annually

% of Total General Fund Revenue:

FY 2004 – 0.11%	FY 2007 – 0.09%	FY 2010 – 0.16%
FY 2005 – 0.10%	FY 2008 – 0.11%	FY 2011 – 0.12%
FY 2006 – 0.10%	FY 2009 – 0.12%	FY 2012 – 0.12%

Revenue Estimate Methodology:

Data

Data from the Department of Revenue (DOR) provides the value of national railroad car fleet, Montana's rolling stock, railroad car tax assessed by company, the average mill levy and applicable tax rate. State accounting data (SABHRS) are used to check the estimates against the historic values.

Legislative Fiscal Division

Revenue Estimate Profile

Railroad Car Tax

Analysis

Although the railcar tax appears quite volatile, most of the volatility is caused by shifts in average mill levies and tax rates, both of which are controlled in large part by factors outside of the growth in rail shipments. The volatility can also be traced to litigation brought by rail companies and settled in federal legislation. In 1993, some rail companies protested tax rates, which reduced tax payments for four years. In 1997, the litigation was settled and the companies were required to make both past and current payments. Railroad properties are taxed as class 12 properties. To calculate total railroad car tax collections, the market value of the Montana fleet is multiplied by the average mill levy and tax rate.

The market value of the rail fleet in Montana is based on a relationship with market value of the U.S. fleet. An estimate for the value of the national fleet is developed using the average rate of growth in the U.S. fleet value, based on a four-year pattern of growth. Montana's average share of the total fleet value is applied to the national estimate. Since 2004, the market value of Montana's rail fleet has been ranged between 0.44% and 0.51% of the nation's fleet. The growth in Montana-allocated value is expected to grow with the national fleet at 7.4% in FY 2014 and by 4.5% in FY 2015.

After the Montana market fleet value is determined, the average commercial and industrial mill levy and tax rate must be calculated. The rate of the mill levy is calculated from the average of statewide commercial and industrial mill levies. The average mill levy is expected to increase because counties are able to raise levies at a rate equal to half of the annual rate of inflation. Furthermore, the increasing costs of school budgets will further force the average mill levy to increase. The calculated mill levy growth estimates are less than 1% throughout the forecast period.

The tax rate for the railroad property is created from a weighted average of five property classes containing commercial and industrial property: class 4, 7, 8, 9, 13 and 14. Class 4 property tax, which contains commercial real estate, is weighted more heavily than the other classes. The estimated tax rate will be 3.45% in FY 2012, FY 2013 and FY 2015.

The rail car tax estimates are completed by multiplying the Montana market value by the average mills and the tax rate.

Rental Car Sales Tax

Revenue Description: Beginning July 1, 2003, a new 4% sales tax was imposed on the base rental charge for rental vehicles. The base rental charge includes use charges for time and mileage, insurance, accessory equipment, and charges for additional or underage drivers. It does not include price discounts, charges for operating an airport concession, motor fuel, intercity drop charges, and government taxes. A rental vehicle is one that is used by a person other than the owner by arrangement and for consideration. Included are light vehicles, motorcycles, motor-driven cycles, quadricycles, motorboats and sailboats, and off-highway vehicles. Sales to the U.S. government are exempt from the sales tax. All facilities subject to the tax must obtain a seller's permit before engaging in business subject to the sales tax within Montana. The Department of Revenue may require a retailer to post security up to twice the average tax liability to be used to recover taxes, interest, and penalties owed. Vendors are allowed to claim and keep 5% of the tax as an allowance, not to exceed \$1,000 a quarter.

Statutory Reference:

Tax Rate (MCA) - 15-68-102(1b)

Tax Distribution MCA) - 15-68-820

Date Due - before the last day of the month following the calendar quarter (15-68-502(1))

Applicable Tax Rate(s): A 4% sales tax is imposed on the base rental charge for rental vehicles.

Distribution: All revenue from this tax is deposited into the general fund.

Distribution Chart:

Collection Frequency: The vendor must pay the tax due by the last day of the month following a calendar quarter.

Telecommunications Excise Tax

Revenue Description: The retail telecommunications excise tax is levied on the sales price of retail telecommunications services originating or terminating in the state. It is paid by the retail purchaser and collected by the provider.

Statutory Reference:

Tax Rate (MCA) – 15-53-130

Tax Distribution (MCA) – 15-53-156

Date Due – 60 days after the end of the calendar quarter (15-53-139)

Applicable Tax Rate(s): The current tax rate of 3.75% is applied to the sales price of retail telecommunications services. Sales price includes payment for services such as distribution, supply, transmission, and delivery, but excludes federal taxes, relocation of service, equipment repair, prepaid calling cards, and other items. Gross receipts from the provision of internet services are also exempt. Credits previously allowed for costs of advanced telecommunications infrastructure improvements were repealed in House Bill 96 by the 2003 legislature.

Distribution: After retaining an allowance for refunds, all proceeds are deposited into the general fund.

Distribution Chart:

Collection Frequency: Quarterly

% of Total General Fund Revenue:

FY 2004 – 1.51%	FY 2007 – 1.14%	FY 2010 – 1.45%
FY 2005 – 1.38%	FY 2008 – 1.15%	FY 2011 – 1.24%
FY 2006 – 1.24%	FY 2009 – 1.23%	FY 2012 – 1.15%

Revenue Estimate Methodology:

Data

Data from quarterly reports produced by DOR provide a history of retail telecommunications sales for each individual company. Inflation data is obtained from IHS.

Analysis

The total retail telecommunication sales are reported by the DOR. The estimate for gross sales is modeled on Montana real gross state product for the information sector. Yearly estimated taxable sales are multiplied by the tax rate to produce gross tax revenue from this source.

Legislative Fiscal Division

FY 2006 – 5.39%	FY 2009 – 4.94%	FY 2012 – 5.34%

Revenue Estimate Methodology:

Data

The data used to estimate the motor vehicle tax are obtained from the state accounting system (SABHRS) and IHS.

Analysis

Vehicle taxes are currently imposed at different rates on five categories of vehicles (tax schedule varies by age and weight) including light vehicles, large trucks, motor homes, motor cycles (including tri-cycles), and boats and snowmobiles. As shown in the figure below, the taxes have increased at a slow rate since FY 2002. The figure below also shows greater rate of growth for light vehicle taxes in FY 2006 and FY 2007. This growth results from the legislative impacts of SB 285 and HB 671, both implemented in the 2005 session.

Legislative Fiscal Division

Revenue Estimate Profile

Vehicle Tax

With constant fees, the future change in vehicle tax revenue results from change in the vehicle stock in Montana. Because taxes are directly connected to the number of vehicles in the state, estimates are made by applying estimated growth rates to the previous year revenue. Growth rates for the stock of Montana vehicles are modeled on IHS estimates for the national and Montana-specific vehicle stock and new car sales nationwide. The growth rate is applied to the base year revenues and projected forward at the same rate for the forecast period.

Coal Severance Tax

Revenue Description: For large producers, the coal severance tax is imposed on all coal production in excess of 20,000 tons per company per calendar year. However, producers of 50,000 tons or less in any calendar year are exempt from the tax.

Statutory Reference:

Tax Rate (MCA) – 15-35-103

Tax Distribution (MCA) – Montana Constitution, Article IX, Section 5; 15-35-108; 17-5-703

Date Due – the report to the Department of Revenue and tax is due 30 days following the close of the quarter (15-35-104)

Applicable Tax Rate(s):

- 10.0% - on the value of surfaced mined coal with a heating quality < 7,000 BTU
- 15.0% - on the value surfaced mined coal with a heating quality ≥ 7,000 BTU
- 3.0% - on the value underground mined coal with a heating quality < 7,000 BTU
- 4.0% - on the value underground mined coal with a heating quality ≥ 7,000 BTU
- 3.75% - on the value of auger mined coal with a heating quality < 7,000 BTU
- 5.0 % - on the value of auger mined coal with a heating quality ≥ 7,000 BTU

Distribution:

Revenue Estimate Profile

Coal Severance Tax

Distribution Chart:

Collection Frequency: The coal severance tax is due 30 days after the end of the quarter.

% of Total General Fund Revenue:

FY 2004 – 0.63%	FY 2007 – 0.59%	FY 2010 – 0.63%
FY 2005 – 0.67%	FY 2008 – 0.61%	FY 2011 – 0.72%
FY 2006 – 0.56%	FY 2009 – 0.72%	FY 2012 – 0.66%

Revenue Estimate Methodology:

The coal severance tax is applied to the value of coal produced. The coal severance tax estimate is developed by estimating the annual contract sales price and production for each producing coal company and any company anticipated to be producing within the 3-year period in question. From these estimates, taxable value can be determined to which the tax rate is applied. Since all production and price information is reported on a calendar year basis, the resulting calendar year estimates are converted into fiscal year estimates.

Data

Major coal companies are surveyed for anticipated production levels and general indications of coal prices. In addition, a review is performed of historical trends and current literature on coal prices. Data from quarterly reports produced by DOR provide a history of production and prices for individual coal companies. These companies are:

Analysis

The taxable value of coal is determined in a three-step process:

1. The future coal production for each company, as reported on the survey, is reduced by the exempt amount of 20,000 tons to get taxable tons.
2. To determine the future price for each company's coal, the company's average contract sales price for the last year increased by 1.7%, the average price increase in FY 2010. The average contract sales price for all companies is shown in the figure below.
3. The estimated production and price for each company are multiplied together and the product for all companies summed to obtain the total taxable value.

Legislative Fiscal Division

Revenue Estimate Profile

Coal Severance Tax

The taxable value is multiplied by the applicable tax rate (3, 3.75, 4, 5, 10 or 15%) to determine total coal severance tax revenue. At this point the total represents estimates for calendar years. To convert the estimates to a fiscal year basis, half the previous calendar year's estimate is added to the half of the current calendar year's estimate.

Adjustments and Distribution

Once total tax revenue for each fiscal year is determined, the applicable distribution percentages are applied.

Electrical Energy Tax

Revenue Description: The electrical energy license tax is imposed on each person or organization engaged in generating, manufacturing, or producing electrical energy in Montana. This tax is in addition to the wholesale energy transaction tax enacted by the 1999 legislature (HB 174).

Statutory Reference:

Tax Rate MCA) – 15-51-101

Tax Distribution (MCA) – 17-2-124(2), 15-51-103

Date Due – 30 days after the calendar quarter (15-51-101, 15-51-102)

Applicable Tax Rate(s): The tax of \$0.0002 per kilowatt-hour (or \$0.20 per megawatt-hour) is levied against all electrical energy produced within the state. A deduction is allowed for "actual and necessary" energy use by the plant for the production of the energy.

Distribution: All proceeds are deposited into the general fund.

Distribution Chart:

Collection Frequency: The electrical energy tax is due 30 days after the end of the quarter.

% of Total General Fund Revenue:

FY 2004 – 0.34%

FY 2007 – 0.25%

FY 2010 – 0.29%

FY 2005 – 0.27%

FY 2008 – 0.26%

FY 2011 – 0.24%

FY 2006 – 0.27%

FY 2009 – 0.27%

FY 2012 – 0.24%

Revenue Estimate Methodology:

The electrical energy tax is applied to the number of kilowatt hours of electricity produced. The estimate for the tax revenue is derived by estimating the annual taxable kilowatt hours produced by each company and any company anticipated to be producing within the 3-year period in question. From these production estimates, the tax rate is applied.

Data

All electrical energy producing companies were surveyed for anticipated kilowatt hours produced, anticipated new production, and anticipated downtime or reduced production. Although the accuracy in the results of the survey was questionable, the raw data were used to develop growth rates. Data from quarterly reports produced by DOR provide a history of kilowatt hours produced for each individual company.

Analysis

A growth rate based on the change in total yearly production from the actual/estimated year to the amount provided by the surveys was applied to the previous production amount. Taxable kilowatt hours are then multiplied by the tax rate to produce total revenue from this source.

Revenue Estimate Profile

Federal Forest Receipts

Revenue Description: The federal government authorizes logging operations on forest lands located within the borders of Montana. The sale of timber generates revenue that the federal government shares with the state in the following year. The state sends the money to the county treasurer of the county in which the receipts were generated. Within thirty days, the county treasurer distributes the money to various county and state accounts.

The previous formula for distributing federal forest payments terminated in FY 2008. In the federal Emergency Economic Stabilization Act of 2008, a new formula for the distribution of forest receipts was enacted. The new formula for FY 2009 through FY 2012 considers acres of federal land within an eligible county, the average three highest 25% payments made to each eligible state for each eligible county under the previous formula, and an income adjustment based on the per capita personal income for each county. As before, not more than 20% but at least 15% must be used by county governments for projects on federal lands. Beginning in FY 2013, because the federal law will sunset, it is assumed that the old method of distributing these monies will prevail – 25% of the value of timber sold averaged over the prior 3 years. As a result, the state share of federal forest receipts distributed to the 55 mills is expected to decline around \$4 million per year.

Statutory Reference:

- Tax Rate – NA
- Tax Distribution MCA) – 17-3-211, 17-3-212
- Date Due – the state treasurer distributes the funds within 30 days after receiving full payment

Applicable Tax Rate(s): N/A

Distribution: The county treasurer apportions federal forest receipts in the following manner:

- 66 2/3% to the general fund of the county
- 33 1/3% to the following county wide accounts, based on the mill ratios of each to total mills in the current year:
 - the county equalization accounts (55 mills)
 - the county transportation account
 - the county retirement accounts

This revenue source represents one component of total non-levy property tax revenue.

Distribution Chart:

Collection Frequency: Twice annually (usually October and December)

% of Total General Fund Revenue: Non-levy is included in “Property Tax: 55 mills”

Legislative Fiscal Division

Revenue Estimate Profile

Federal Forest Receipts

Revenue Estimate Methodology: With the passage of the federal Emergency Economic Stabilization Act of 2008, the amount available to each county declines 10% per year until FY 2012, after which the act sunsets. The general fund share will vary because of this and as a result of changes in the 55 mill share as a percent of the total countywide school mills. Beginning in FY 2013, because the federal law will sunset, it is assumed that the old method of distributing these monies will prevail – 25% of the value of timber sold averaged over the prior 3 years. As a result, the state share of federal forest receipts distributed to the 55 mills is expected to decline around \$4 million per year.

Revenue Estimate Profile

Metalliferous Mines Tax

Revenue Description: The metalliferous mines license tax is imposed on the production of metals, gems or stones in the state. The tax rate is applied to the gross value of the product, which is defined as the market value of the commodity multiplied by the quantity produced. Senate Bill 30, enacted in the August 2002 special legislative session, revised the payment of taxes from once to twice a year. The first \$250,000 of value is exempt from taxation. A company taxed at both rates can claim both exemptions.

Statutory Reference:

Tax Rate (MCA) – 15-37-103

Tax Distribution (MCA) –15-37-117, 17-2-124(2)

Date Due – August 15th for period January through June, March 31st for period July through December (15-37-105)

Applicable Tax Rate(s): The tax rate for a 6-month period is as follows:

Gross value is defined as monetary amounts or refined metal received for the products less:

1. Basic treatment and refinery charges
2. Transportation costs from the mine to a mill or other processor
3. Quantity and price deductions
4. Interest
5. Penalty metal, impurity and moisture deductions

Metalliferous Mines Tax Rates		
	Gross Value	Tax Rate
For concentrates shipped to a smelter, mill or reduction work:	\$0-\$250,000	Exempt
	\$250,000+	1.81%
For gold, silver, or any platinum group metal that is dore*, bullion, or matte* and that is shipped to a refinery:	\$0-\$250,000	Exempt
	\$250,000+	1.6%

Distribution: The distribution of the metal mines tax has been altered several times since the 1990s. Prior to the 2005 Legislature, the most recent change had been enacted by the 2001 Legislature in Senate Bill 484 (effective July 1, 2002) that created a hard-rock mining reclamation debt service fund to pay debt service on the \$8.0 million of bonds authorized for state costs related to hard-rock mining reclamation, operation, and maintenance. The 8.5% allocation of metalliferous mines tax revenue previously allocated to the orphan share account was allocated to the hard-rock mining reclamation debt service fund. The 2005 Legislature increased the allocation to counties from 24% to 25% and decreased the general fund allocation from 58% to 57%. The table below shows recent historical distributions of the tax revenue.

Metalliferous Mines Tax Distribution

Revenue Estimate Profile

Metalliferous Mines Tax

Distribution Chart:

Collection Frequency: Biannually

% of Total General Fund Revenue:

FY 2004 – 0.23%	FY 2007 – 0.49%	FY 2010 – 0.40%
FY 2005 – 0.34%	FY 2008 – 0.55%	FY 2011 – 0.45%
FY 2006 – 0.41%	FY 2009 – 0.33%	FY 2012 – 0.54%

Revenue Estimate Methodology:

The metalliferous mines tax is applied to the taxable gross value of production. The metalliferous mines tax estimate is developed by estimating the annual sales price for each type of metal produced and the anticipated production quantity of each metal by company. From these estimates, taxable gross value can be determined to which an effective tax rate is applied. Since all production and price information is reported on a calendar year basis, the resulting calendar year estimates are converted into fiscal year estimates.

Data

Mining companies are surveyed for anticipated production levels. Historical and future prices are obtained from various sources, including COMEX, NYMEX, and KITCO, depending on the metal. In addition, a review is performed of historical trends, current literature on metals and metal prices, and companies' 10-Q reports. Data from biannual reports produced by DOR provide a history of production and prices by commodity and taxable gross value for each mining company.

Analysis

The taxable value of metals is determined in a four-step process:

- As reported on the survey, future metals production for each company is summed by commodity. Amounts may be adjusted to fit with historical trends or if major changes are expected from historical production.
- To determine the future price for each metal, different techniques are used depending on the commodity and the reasonableness of future prices based on research of the literature and directions of future markets.
 - Gold – the future prices are used for all the forecast years
 - Copper, silver – the most current futures price is multiplied by the ratio of Montana's price for the last known or forecast year to the most current futures price
 - Molybdenum – the current market price is carried forward for all forecast years
 - Lead, Zinc – the price from 2008 is carried forward for all forecast years

Legislative Fiscal Division

Revenue Estimate Profile

Metalliferous Mines Tax

- Palladium, platinum, rhodium, nickel – the price for the last known calendar year is used for all future years.
- The estimated production amount for each metal for all companies is summed and multiplied by the estimated price for that metal. This is done for each metal and the products summed to yield a total gross value.
- Total taxable value is obtained by reducing the total gross value by: a) the tax exempt amount of \$250,000/year for each company; and b) allowable treatment, refinery, transportation, and other costs.

Taxable value is multiplied by an effective tax rate. Since a company's taxable value could be subject to two tax rates - 1.81% for concentrates shipped to a smelter, mill or reduction work and 1.6% for dore, bullion, or matte that is shipped to a refinery - an effective tax rate is used to capture both these rates. The effective tax rate for FY 2010 was rounded and used for the estimate.

Legislative Fiscal Division

Revenue Estimate Profile

Metalliferous Mines Tax

The calendar year estimate is obtained by multiplying the total taxable value by the effective tax rate. To convert the estimates to a fiscal year basis, half the previous calendar year's estimate is added to the half of the current calendar year's estimate.

Adjustments and Distribution

Once total tax revenue for each fiscal year is determined, the distribution percentages are applied.

Revenue Estimate Profile

Oil and Natural Gas Production Tax

Revenue Description: The oil and natural gas production tax is imposed on the production of petroleum and natural gas in the state. Gross taxable value of oil and natural gas production is based on the type of well and type of production. A portion of the revenue from the tax may be returned to Indian tribes per agreements between the Department of Revenue and the tribes.

Statutory Reference:

Tax Rate (MCA) – 15-36-304. Privilege and license tax – 82-11-131, Administrative Rules 36.72.1242
 Tax Distribution (MCA) – 15-36-331(4), 15-36-332(2&3) (to taxing units)
 Date Due – within 60 days after the end of the calendar quarter (15-36-311(1))

Applicable Tax Rate(s): The oil and natural gas production tax has numerous tax rates depending on several factors. These factors include whether the oil or gas is produced from a stripper well, a stripper incentive well, from a well initially drilled before 1999 or after, from a well newly drilled within the last year or 18 months, and whether the interest being taxed is the working interest or the royalty interest. The Board of Oil and Gas Conservation imposes an additional privilege and license (P & L) tax on all oil and natural gas tax rates. Starting October 2006 as set by the Board, the P & L tax rate is 0.09%. Based on this rate, HB 758 enacted by the 2005 Legislature allows an additional tax rate of 0.17% to generate revenue for local impacts for local governments. The two taxes may not exceed 0.3%. The following table shows tax rate percentages for each type of pre-1999 oil and post-1999 oil, excluding the P & L tax and the new Local Impact tax. The quarterly tax rates on stripper production and on incremental production are lower than that for regular production unless the price of West Texas Intermediate averages above \$30 for the quarter. Similarly, the quarterly tax rate for stripper well exemption production (1-3 barrels a day) is lower than that for regular production unless the price of West Texas Intermediate averages above \$38 for the quarter.

Oil Tax Rates	
15-36-304(5), MCA

Distribution: Once the oil and natural gas production taxes have been collected, the revenue is first distributed based on the amounts collected from the P & L and Local Impact taxes. The amounts from the P & L tax are distributed to the Board of Oil and Gas Conservation. The amounts from the Local Impact tax are distributed to the oil and gas natural resource state special revenue account. The amounts received by the Board and the oil and gas natural resource account vary based on a sliding tax scale based on the P & L tax set by the Board. Counties producing oil and natural gas receive the next share of total revenue with each county having its own statutory distribution percentage of total revenue, including the revenue generated by the P & L and Local Impact taxes. A portion of the revenue may be returned to Indian tribes per agreements between the Department of Revenue and the tribes. The remainder of the revenue is distributed to other state accounts in the following manner:

- Coal bed methane account – 1.23%
- Natural resources projects account – 1.45%
- Natural resources operations account – 1.45%
- Orphan share account – 2.99%
- University system 6 mill levy account – 2.65%
- General fund – the remainder (90.23%)

The distributions of county shares and the amount of oil and natural gas production tax revenue deposited in the oil and gas natural resource account are statutorily appropriated and are based on the statutorily set percentages for each county.

Because the exact distribution of oil & natural gas tax revenue varies depending on various factors, the table only reflects FY 2012 actual distributions. Please see the distribution graph for exact distribution percentages.

Legislative Fiscal Division

Revenue Estimate Profile

Oil and Natural Gas Production Tax

Collection Frequency: Quarterly: The oil and natural gas production tax is due 60 days after the end of the production quarter.

% of Total General Fund Revenue:

FY 2004 – 2.99%	FY 2007 – 5.25%	FY 2010 – 5.87%
FY 2005 – 4.09%	FY 2008 – 7.64%	FY 2011 – 5.60%
FY 2006 – 5.42%	FY 2009 – 5.56%	FY 2012 – 5.21%

Revenue Estimate Methodology:

The estimate for oil and natural gas revenue is produced from estimating the price and specific production subject to varying tax rates from which value can be obtained. Specific statutory tax rates are used for the types of oil and natural gas that are taxed differently.

Data

Data from the Board of Oil and Gas Conservation are used extensively to isolate monthly historical production of oil and natural gas by field and by individual well. IHS provides future estimates of West Texas Intermediate oil and natural well head natural gas prices. Production, price, value, and revenue collections, by oil type, are provided on a quarterly basis by the Department of Revenue.

Oil Analysis

Production—The estimate is developed on a quarterly basis with production from horizontal wells separate from all other production. The majority of the increased production is from horizontal wells, as illustrated in the figure below.

Legislative Fiscal Division

Revenue Estimate Profile

Oil and Natural Gas Production Tax

Existing horizontal wells will follow a production decline curve unique to the characteristics of these wells. Future production from completed wells can be estimated by developing a normalized production decline curve from the producing wells. In doing so, the difficulty of having different starting time for each well can be eliminated by averaging each well’s production from a common time point. The result is a curve that represents the average production of horizontal wells by month of production. Production from future wells can be estimated by applying the production curve coefficients to an estimate of future spudded wells. Knowing monthly production from each well and the date it was placed into production is essential for estimating oil tax revenue because tax rates vary based on the length of time a well has been in production. The dynamics in the timing of when wells enter and fall out of the various tax rates and the changes in production at the various stages is complex, but needs to be modeled to ensure accurate estimates.

Production from all other wells is also estimated on an annual basis and by the different taxation types. For each year, the estimate is derived by multiplying the previous year by the ratio of the results of a regression analysis for the current and the previous year. The results for each tax type are then summed by year.

Price—The price for each quarter is estimated by adjusting the IHS West Texas Intermediate oil price for that quarter by the ratio of the previous three year average Montana price to the three year average of the IHS price.

Once production and prices have been estimated, the value can be calculated by the product of the two. The quarterly value of each tax type is then multiplied by the applicable tax rate to obtain the estimate. The sum of the revenue from all tax types for each fiscal year determines the oil production revenue estimate.

Natural Gas Analysis

Production—The estimate is developed on quarterly basis with data from the Board of Oil and Gas Conservation. Existing wells will follow a production decline curve unique to the characteristics of these wells. Future production from completed wells can be estimated by developing a normalized production decline curve from the producing wells. In doing so, the difficulty of having different starting time for each well can be eliminated by averaging each well’s production from a common time point. The result is a curve that represents the average production of wells by month of production. Production from future wells can be estimated by applying the production curve coefficients to an estimate of future spudded wells. Knowing monthly production from each well and the date it was placed into production is essential for estimating gas tax revenue because tax rates vary based on the length of time a well has been in production. The dynamics in the timing of when wells enter and fall out of the various tax rates and the changes in production at the various stages is complex, but needs to be modeled to ensure accurate estimates.

Production from all wells is estimated on an annual basis and by the different taxation types. For each year, the estimate is derived by multiplying the previous year by the ratio of the results of a regression analysis for the current and the previous year. The results for each tax type are then summed by year.

Legislative Fiscal Division

Revenue Estimate Profile

Oil and Natural Gas Production Tax

Price—The price for each quarter is estimated by adjusting the IHS West Texas national well head price for that quarter by the ratio of the previous three year average Montana price to the three year average of the IHS price.

Once production and prices have been estimated, the value can be calculated by the product of the two. The quarterly value of each tax type is then multiplied by the applicable tax rate to obtain the revenue. The sum of the revenue from all tax types for each fiscal year determines the natural gas revenue estimate.

Adjustments and Distribution

Once the oil and natural gas estimates have been summed, the distribution formula is applied with the amounts to the Board of Oil and Gas and to local governments distributed first and the remainder subject to statutory percentages.

Revenue Estimate Profile

Resource Indemnity Tax

Revenue Description: The state imposes a resource indemnity and ground water assessment (RIGWA) tax on the gross value of coal (based on the contract sales price), as well as most minerals, but not gravel, metals, oil, and natural gas. Prior to July 1, 2002 when the Governor by executive order certified to the Secretary of State that the resource indemnity trust balance had reached \$100 million, a portion of oil and natural gas taxes had been distributed under the same methodology as the RIGWA tax. Once the RIT balance reached \$100 million, this portion of oil and natural gas taxes no longer has a connection to the RIGWA tax. The RIGWA tax on all other production is specific to each resource as described below.

Statutory Reference:

- Tax Rate (MCA) – 15-38-104
- Tax Distribution (MCA) – 15-38-106
- Date Due from metal producers – March 31st following the end of the calendar year (15-38-105, 15-38-106(1))
- Date Due from mineral producers – 60 days following the end of the calendar year (15-38-105, 15-38-106(1))

Applicable Tax Rate(s): The applicable rates are as follows:

- Coal: \$25 plus 0.4% of the gross value of coal produced in the preceding year in excess of \$6,250
- Minerals: \$25 plus 0.5% of the gross value of minerals (excluding gravel and metals, and excluding oil and natural gas since the resource indemnity trust has reached \$100 million) produced in the preceding year in excess of \$5,000
- Talc: \$25 plus 0.4% of the gross value of talc produced in the preceding year in excess of \$625
- Vermiculite: \$25 plus 2.0% of the gross value of vermiculite produced in the preceding year in excess of \$1,250
- Limestone: \$25 plus 10.0% of the gross value of limestone produced in the preceding year in excess of \$250
- Garnets: \$25 plus 1.0% of the gross value of garnets produced in the preceding year in excess of \$2,500

Distribution: Beginning FY 2004, the amount needed to cover debt service on CERCLA bonds (after amounts transferred from the CERCLA cost recovery account) is deposited to the CERCLA match debt service account. Beginning FY 2008, the remainder of RIGWA tax proceeds is distributed in the following order:

1. \$366,000 each year to the ground water assessment account
2. \$150,000 to the water storage account for the 2009 biennium only
3. 50.0% of the remainder split evenly between the environmental quality protection fund and the hazardous waste/CERCLA account
4. the remainder to the natural resources projects account

Distribution Chart:

Legislative Fiscal Division

Revenue Estimate Profile

Resource Indemnity Tax

Collection Frequency: The tax is paid annually on or before March 31 of the year following the production year.

% of Total General Fund Revenue: N/A

Revenue Estimate Methodology:

Data

The data used to estimate the resource indemnity and groundwater assessment (RIGWA) tax are obtained from the coal severance tax source, the property tax source, and the state accounting system (SABHRS).

Analysis

The RIGWA tax is imposed on the gross taxable value from the production of coal and miscellaneous mines. Before FY 2002, when Governor Martz certified that the resource indemnity trust had reached the required principal amount of \$100 million, oil and natural gas production was also taxed under RIGWA, but the oil and natural gas component of the tax ended when the trust reached the limit. The gross value estimates prepared for the coal severance tax and class 1 property tax (miscellaneous minerals) are used in the estimate for the RIGWA tax.

The future taxable value of coal, produced by all mines, is estimated in the coal severance tax source. The future taxable value of other mineral production is estimated at the amount of the last known year.

To develop the estimates for RIGWA tax collections, the tax rates are applied to the production value of each of the components, coal and other minerals. The tax estimates for the two components are summed to produce the total estimate of the RIGWA tax.

Legislative Fiscal Division

Revenue Estimate Profile

US Mineral Royalty

Revenue Description: Under the federal Mineral Lands Leasing Act (30 USC, Section 191), 50.0% of all sales, bonuses, royalties, and rentals received from federal lands in Montana must be paid to the state. However due to federal legislation, from October 2007 through the current year, state shares were 48.0%. Based on statements by Office of Natural Resources Revenue personnel, the reduced rate is assumed to continue. The money is to be used as the legislature may direct, giving priority to those subdivisions of the state socially or economically impacted by development of minerals leased under the federal act. The revenue produced on federal public lands includes royalties and bonuses from oil, gas, coal, and other mineral exploration and extraction.

Statutory Reference:

Tax Rate – NA

Distribution – 17-3-240, MCA

Applicable Tax Rate(s): N/A

Distribution: With the enactment of Senate Bill 212 by the 2005 Legislature, receipts are deposited 75% to the general fund and 25% to the state special revenue mineral impact account. Money in the mineral impact account is statutorily appropriated for distribution to eligible counties in which the minerals were extracted.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue:

FY 2004 – 2.08%	FY 2007 – 1.54%	FY 2010 – 1.86%
FY 2005 – 1.78%	FY 2008 – 1.85%	FY 2011 – 1.79%
FY 2006 – 1.72%	FY 2009 – 1.75%	FY 2012 – 1.66%

Revenue Estimate Methodology:

The estimate for Montana’s share of mineral royalties and other mineral related income from its federal lands is produced by estimating each of the major sources of revenue, applying the applicable royalty rate for each, and multiplying by Montana’s share of the revenue.

Data

Data from which to base estimates for this revenues source have been sparse and incomplete. Up until October 2001, the Office of Natural Resources Revenue of the U.S. Department of Interior had provided data used to make the estimate. However, lawsuits and court orders have since stifled the flow of data. Only recently has yearly data been available for federal fiscal years through 2009. The current estimates rely on these data, future prices of oil and natural gas, and coal production on federal land obtained from a survey of Montana’s coal companies.

Legislative Fiscal Division

Revenue Estimate Profile

US Mineral Royalty

Analysis

The estimate is derived by first estimating the individual revenue components. The estimate for mineral royalties is obtained by multiplying together estimates for production, price, the applicable royalty rate, and Montana’s percentage share.

- Coal—Calendar year production is estimated by multiplying the calendar year production reported by each company on the coal survey by the percent of production each anticipated to be from federal lands multiplied by a federal fiscal year conversion factor. Price is determined by calculating a federal fiscal year growth by converting the calendar year Montana contract sales price into a federal fiscal year price and determining the growth between the current and previous years. Production multiplied by price yields value. The value is then multiplied by the royalty rate for the last known federal fiscal year. This royalty rate is used for all estimated years. Of the total calculated royalty, Montana receives 48%.

- Oil—Federal fiscal year production is estimated by multiplying the current year’s amount by the growth between it and the previous year. Yearly prices are determined by first averaging quarterly future prices of West Texas Intermediate oil as forecast by IHS, based on the federal fiscal year, for the current and previous year. Price for the current federal fiscal year is determined by multiplying current year’s IHS price by the ratio of the previous year’s estimated (or actual) price to IHS price for the previous year. Production multiplied by price yields value. The value is then multiplied by the royalty rate. The actual royalty rate for federal FY 2009 is used for all estimated years. Of the total calculated royalty, Montana receives 48%.

Legislative Fiscal Division

Revenue Estimate Profile

US Mineral Royalty

- Natural Gas—Calendar year production is estimated by multiply the previous year’s production by the growth rate of the two previous years. Yearly prices are determined by first averaging quarterly future prices of well head natural gas as forecast by IHS, based on the federal fiscal year, for the current and previous year. The current year price is then multiplied by the ratio of the previous year’s price to the previous year’s estimated (or actual) price. Production multiplied by price yields value. The value is then multiplied by the royalty rate. The actual royalty rate for federal FY 2009 is used for all estimated years. Of the total calculated royalty, Montana receives 48%.

- Natural Gas Liquid—Federal fiscal year production is estimated by changing the previous year’s amount by the percentage change in the last two years for all of the estimated years. Yearly prices are determined by first averaging quarterly future prices of well head natural gas as forecast by IHS, based on the federal fiscal year, for the current and previous year. The current year price is then multiplied by the ratio of the previous year’s price to the previous year’s estimated (or actual) price. Production multiplied by price yields value. The value is then multiplied by the royalty rate. The actual royalty rate for federal FY 2009 is used for all estimated years. Of the total calculated royalty, Montana receives 48%.

Legislative Fiscal Division

Revenue Estimate Profile

US Mineral Royalty

- Methane—Federal fiscal year production is estimated by changing the 2009 amount and each forecast year by the average annual change between 2005 and 2009. Yearly prices are determined by first averaging quarterly future prices of national well head natural gas as forecast by IHS, based on the federal fiscal year, for the current and previous year. The current year price is then multiplied by the ratio of the previous year’s price to the previous year’s estimated (or actual) price. Production multiplied by price yields value. The value is then multiplied by the royalty rate. The actual royalty rate for federal FY 2009 is used for all estimated years. Of the total calculated royalty, Montana 48%.
- Rents, Bonuses and Other—The amounts from actual federal FY 2009 are used for all estimated years. Montana’s portion is 48%.

Adjustments and Distribution

Since the estimates are based on the federal fiscal year a 25/75 split is used to convert to a state fiscal year. The total amount of anticipated revenue is distributed 75% to the general fund and 25% to the state special revenue fund.

Revenue Estimate Profile

Wholesale Energy Tax

Revenue Description: The wholesale energy transaction tax, enacted by the 1999 Legislature (HB 174) is imposed on the amount of electricity transmitted by a transmission services provider in the state.

Statutory Reference:

Tax Rate (MCA) – 15-72-104(1)

Tax Distribution (MCA) – 15-72-106(3)

Date Due – 30th day of the month following the end of the calendar quarter (15-72-110)

Applicable Tax Rate(s): The tax rate of 0.015 cent is applied to the number of kilowatt hours transmitted (or \$0.15 per megawatt). If the electricity is produced in-state and sold out-of-state, the taxpayer is the person(s) owning the electrical generation property, and the tax is collected by the transmission services provider. If the electricity is produced in-state for delivery in-state, or is produced outside the state for delivery in-state, the taxpayer is the distribution services provider, and the tax is collected by the transmission services provider. The tax does not apply to: 1) electricity that is transmitted through the state that is neither produced nor consumed in the state; 2) electricity generated in the state by an agency of the federal government for delivery outside the state; 3) electricity delivered to a distribution services provider that is a municipal utility or a rural electric cooperative which opts out of competition under HB 390 (1997 legislature); 4) electricity delivered to a purchaser that received its power directly from a transmission or distribution facility owned by an entity of the US government; 5) electricity meeting certain contractual requirements that is delivered by a distribution services provider that was first served by a public utility after December 31, 1996; 6) electricity that has been subject to the transmission tax in another state; and 7) a 5% line loss exemption for transmission of electricity produced in the state for delivery outside of the state.

Distribution: All proceeds are deposited into the general fund.

Distribution Chart:

Collection Frequency: Quarterly

% of Total General Fund Revenue:

FY 2004 – 0.24%	FY 2007 – 0.20%	FY 2010 – 0.22%
FY 2005 – 0.22%	FY 2008 – 0.20%	FY 2011 – 0.22%
FY 2006 – 0.22%	FY 2009 – 0.21%	FY 2012 – 0.18%

Revenue Estimate Methodology:

The wholesale energy transaction tax is applied to the number of kilowatt hours transmitted less 5% for line loss on out-of-state transmissions. The forecast for the tax revenue is developed by estimating the annual taxable kilowatt hours transmitted for each company and any company anticipated to be transmitting within the forecast period. The tax rate is applied to the estimated number of kilowatt hours to produce calendar revenue estimates, which are then converted into fiscal year estimates.

Legislative Fiscal Division

Revenue Estimate Profile

Wholesale Energy Tax

Data

All energy transmitting companies are surveyed for anticipated kilowatt hours transmitted, anticipated new transmissions, anticipated downtime or reduced transmission, and a percentage split between in-state and out-of-state transmissions; these data used to develop growth rates. Data from quarterly reports produced by DOR provide a history of in-state and out-of-state kilowatt hours transmitted by each company.

Analysis

A growth rate based on the change in total yearly production from the actual/estimated year to the amount provided by the surveys was applied to the previous gross production amount. The totals are added for each year and allowable line loss is calculated and subtracted from the yearly total. Net taxable kilowatt hours are multiplied by the tax rate to produce total revenue from this source.

Adjustments and Distribution

Once total tax revenue for each fiscal year is determined, the applicable distribution percentage, 100% to the general fund, is applied.

Revenue Estimate Profile

Capital Land Grant Interest and Income

Revenue Description: Lands granted by the federal government to the state generate income from a variety of sources. Section 12 of the *Enabling Act* requires that income generated on certain sections of federally granted land be used for public buildings at the state capital for construction, repair, renovation, and other permanent improvements of state buildings. Capital land grant funds can also be used for the acquisition of land for such buildings, as well as the payment of principal and interest on bonds issued for any of these purposes.

Non-permanent sources of revenue generated from capital land grant lands include: grazing fees, agricultural fees, miscellaneous fees and rentals, and oil and natural gas leases and penalties. Senate Bill 65, enacted by the 2009 Legislature, allows an amount up to 25% of distributable revenue to be diverted to the trust land administration account to fund DNRC administrative costs. Permanent sources of revenue generated from capital land grant lands include timber sales and oil and natural gas royalties. All sources of revenue are subject for diversion to DNRC for administration.

Statutory Reference:

Tax Rate – NA
Tax Distribution (MCA) – 18-2-107
Enabling Act, Sections 10, 12 & 17
Other (MCA) – DNRC trust land administration diversion (77-1-108 & 109)
DNRC land bank administration diversion (77-2-362)

Applicable Tax Rate(s): N/A

Distribution: After diversions for DNRC administration, all remaining capital land grant income is deposited into a capital projects fund to be used for projects on the state capital complex in accordance with the provisions of Section 12 of the *Enabling Act*.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

Revenue Estimate Methodology:

The estimate for interest and income from the capital land grant trust determines the net amount of revenue that will be distributed to the trust beneficiary. This means that in addition to estimating the various revenues from the capital land grant trust, estimates of the diversion for DNRC administration costs that reduce the amount of revenue deposited to the capital program fund must also be estimated. Therefore, the estimated amounts shown for this revenue source are not total revenues, but are net of diversions. Since all of the trust income is distributed, the trust has no monetary corpus.

Data

Data from SABHRS provide a history of each individual interest and income revenue component. Department of Natural Resources and Conservation (DNRC) annual reports and other data provide additional information such as mineral prices and production. Budget submissions on the state budgeting system (MBARS) provide anticipated diversions.

Legislative Fiscal Division

Revenue Estimate Profile

Capital Land Grant Interest and Income

Analysis

The estimate is produced by estimating the revenue components and then subtracting estimated diversion amount.

Revenue Components

1. Timber – Estimates of timber harvest from capital land grant trust lands are taken directly from DNRC estimates.
2. Grazing Fees – Rates are tied to the price of cattle. Cattle prices are expected to be close to those experienced in FY 2012, perhaps slightly less. It is anticipated the grazing fee revenue will be similar to FY 2012.

3. Miscellaneous Rentals – These are small income components that are combined and estimated together. For each fiscal year estimated, the estimate is based on the average of the previous four years.
4. Agricultural Fees – Fees are based on a crop share basis. Commodity prices are expected to be about the same as FY 2012 resulting in similar returns.
5. Oil & Gas Bonuses – Estimates continue the amount received in FY 2012.
6. Oil & Gas Leases – For each fiscal year estimated, the estimate is the average of the previous nine years with the highest and lowest years discarded.
7. Mineral Royalties – Mineral royalties are received from oil and natural gas. Royalties are estimated by increasing the previous fiscal year's production by the growth rate obtained from the average annual growth from for the previous 15 years with the highest and lowest years discarded.
8. Oil & Gas Penalties – For each fiscal year estimated, the estimate is the average of the previous two years.

Diversion

The diversion amount funds operational costs in DNRC, but reduces the amount of revenue distributed to the trust beneficiaries (see the figure below). To determine future diversion amounts, DNRC's estimated amounts are used.

Adjustments and Distribution

Once total revenue and total diversions have been estimated, the net amounts are distributed to the capital project fund.

Coal Trust Interest

Revenue Description: Article IX, Section 5 of the Montana Constitution requires that 50% of all coal severance tax revenue be deposited in a permanent coal trust fund and that the principal of the trust "shall forever remain inviolate unless appropriated by a three-fourths vote of each house". Coal severance tax funds flowing into the trust fund are first used to secure and subsidize state bonds issued to finance water resource and renewable resource development projects and activities. With the enactment of House Bill 249 by the 2005 Legislature, beginning FY 2006 the remaining funds are then split 50% (25% of total revenue) to the treasure state endowment trust fund, 25% (12.5% of total revenue) to the treasure state endowment regional water system trust fund, and 25% (12.5% of total revenue) to the big sky economic development trust fund. The permanent trust fund no longer receives coal severance tax revenue. By statute, interest earned on the permanent trust that is not earmarked to other programs is deposited to the general fund. When calculating interest earnings, the impact of loans made from the trust, such as the in-state investment program, is taken into account.

As of October 1, 1995, all fixed-income investments held by the state's major trust funds were transferred to a newly-created trust fund bond pool (TFBP). The majority of permanent coal tax trust funds are invested as part of the TFBP. Some funds, however, are invested on a short-term basis in the state's short-term investment pool (STIP). In addition, state law provides that trust funds may be used for in-state commercial loans to stimulate economic development. The state Constitution prohibits the investment of the permanent trust in common stock.

FY 2005 – 2.40%	FY 2008 – 1.47%	FY 2011 – 1.5%
FY 2006 – 1.82%	FY 2009 – 1.49%	FY 2012 – 1.38%

Revenue Estimate Methodology:

Data

The data used to estimate interest earnings from the coal trust are obtained from the Board of Investments (BOI), IHS, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by IHS and historic interest collections are obtained from SABHRS.

Analysis

The coal trust was created from distributions of the coal severance tax. While the Constitution requires that 50% of the coal severance tax collections be distributed into the coal trust, in early the 1990’s the first sub-trust was created and two more were subsequently formed. Currently, the required coal tax revenue flows into the three sub-trusts and none of the tax revenue is deposited into the permanent coal trust. The principal or corpus of the coal trust (the portion that generates general fund interest) now stands at \$536.9 million.

To forecast the coal trust interest earnings, four interest/income components are estimated independently and summed. The interest/income components include:

- Trust funds bond pool (TFBP)
- In-state investments
- Short-term investment pool (STIP)
- Payback interest

Legislative Fiscal Division

Revenue Estimate Profile

Coal Trust Interest

The TFBP was formed in 1995 to manage the fixed investments held in the state's major trust funds. Each trust owns "shares" of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the top bar of the figure below. To estimate TFBP earnings, the base year rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable new long-term rate for these securities is based on an average of four long-term rates projected by IHS.

As seen in the figure above, earnings from in-state investments are the second largest source of income to the coal tax trust. The BOI is required by statute to invest 25% of the coal tax trust in the Montana economy. Investments must be made to maximize the long-term benefit to the Montana economy. In-state investments primarily consist of loans to Montana business entities and earnings are equal to the interest charged on the loans. The in-state balance is held constant throughout the biennium because no new flow of revenue is expected.

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed based on IHS projections of three short-term investments. The average of these rates is then converted to a fiscal year basis. The average fiscal year short-term rate is expected to be 0.039% in FY 2013, 0.043% in FY 2014, and 0.14% in FY 2015.

Payback interest earnings result from a loan of \$46.4 million to the common school trust fund, approved in SB 495 during the 2003 session, was re-paid at the end of FY 2010. Interest on the loan was required to equal the rate of return generated by the TFBP. Additional income was derived from payment of the loan principal. Principal repayments were temporarily placed into STIP and earn interest until invested in the TFBP. Loan interest paid into the trust declined as the outstanding principal was repaid.

After the estimates are calculated, the projected earnings from the four sources are combined to reach total coal trust interest revenue, and the revenues are distributed as described above.

Revenue Estimate Profile

Common School Interest and Income

Revenue Description: Lands granted by the federal government to the state for the benefit of public schools generate income. The common school trust is actually part of the trust and legacy trust fund that includes nine other trusts. Prior to FY 1996, interest and income from the common school trust was deposited in the state equalization account. Beginning in FY 1996, this interest and income was deposited in the general fund, as mandated by SB 83, passed by the 1995 Legislature. Beginning FY 2003, House Bill 7 from the August 2002 special legislative session changed the deposit to the state special revenue guarantee account and statutorily appropriated the money for schools. The estimates show the amount of revenue deposited to the guarantee account and are net of amounts diverted for DNRC administration costs and those deposited directly to the school facility and technology account. With the enactment of Senate Bill 65 by the 2009 Legislature, diverted revenue can be derived from: 1) distributable revenue; 2) sale of easements; 3) timber, except from public school and Montana university system lands; 4) mineral royalties; and 5) fees from sales of state lands except lands granted by the Morrill Act. The amount of the permanent revenue (mineral royalties and easements) diverted from the common school trust reduces the growth of the trust fund balance and, hence, reduces the amount of future distributable interest earnings.

With the enactment of HB 152 by the 2009 Legislature, revenue from the value of timber over 18 million board feet and revenue from power site rents are no longer deposited to the guarantee account, but are deposited to the school facility and technology account. Mineral royalty revenue required to pay interest and principal on the SB 495 loan is not included since the loan was repaid in FY 2008. All net (excluding amounts for administration) mineral royalty revenue is deposited to the guarantee account for transfer to the school facility and technology account. These items are explained below.

Common school lands produce two kinds of revenue: 1) distributable income such as interest earnings, agricultural rents or crop shares, and timber sale revenue; and 2) permanent income that is returned to the trust such as income from the sale of minerals (see the effects of Senate Bill 495 from the 2003 legislative session below), land, and easements. Excluding the amount of revenue diverted for DNRC administration (Senate Bill 65 enacted by the 2009 Legislature) and to the school facility and technology account (House Bill 152 enacted by the 2009 Legislature), 95% of certain distributable revenue is available to fund public schools. Timber revenue is allocated: 1) 5% to the permanent school trust; 2) revenue received from production over 18 million board feet is deposited to the school facility and technology account; and 3) any remainder to the guarantee account for the support of public schools.

As of October 1, 1995, all fixed-income investments held by the state's major trust funds (which include the trust and legacy fund of which the common school trust is a part), were transferred to a newly-created Trust Funds Bond Pool (TFBP). The majority of common school trust funds are invested as part of the TFBP. Some funds, however, are invested on a short-term basis in the state's Short Term Investment Pool (STIP). The state Constitution prohibits the investment of common school trust funds in common stock. Interest income is distributed 95% to the guarantee account and 5% to the trust.

Senate Bill 495 (enacted by the 2001 Legislature) authorized DNRC to purchase the mineral production rights (with a loan from the coal severance trust) from the common school trust. The department subsequently purchased \$138.9 million of net future mineral royalties from the school trust for \$46.4 million. Since these royalties will no longer be deposited to the trust, interest earnings from the trust corpus are lessened. It is estimated that the trust balance will be at least \$92.5 million less after all the \$138.9 million has been distributed. The net mineral royalties are first used to pay the principal and interest of the \$46.4 million loan with the remainder deposited to the guarantee account to fund base aid. Since the loan was paid off in FY 2008, SB 2 (May 2007 special session) directs that all net mineral royalties (until the total amount of \$138.9 million that was purchased is received) are to be deposited to the guarantee account and then transferred to the school facility improvement account (changed to the facility and technology account in HB 152 enacted by the 2009 Legislature). The amount of \$138.9 million in net mineral royalties was achieved at the end of FY 2010. After FY 2010, all mineral royalties (except those diverted for administration costs under SB 65 enacted by the 2009 Legislature) will be deposited to the permanent school trust fund. For further information and analysis on Senate Bill 495 contact the Legislative Fiscal Division for a copy of the two-part report: "Senate Bill 495-Implementation, Impacts and Implications."

Applicable Tax Rate(s): N/A

Distribution: As described above, 95% of interest and income from the common school permanent trust fund (excluding a portion of timber sale revenue and after amounts diverted for DNRC administration) is distributed to the state special revenue guarantee account and is statutorily appropriated for schools. The remaining 5% is deposited to the permanent trust fund. The amount of timber sale revenue over 18 million board feet is deposited to the school facility and technology account. Up until the total of \$138.9 million of purchased royalties was reached, the portion of mineral royalties not used for DNRC administration was deposited to the guarantee account and, with the enactment of SB 2 (May 2007 special session), transferred to the school facility and technology account (renamed in HB 152 enacted by the 2009 Legislature). Since the \$138.9 million was reached late in FY 2010, mineral royalties will again be deposited to the common school permanent trust fund and will generate additional distributable income. The amounts deposited to the guarantee account are shown in this revenue source.

Distribution Chart:

Collection Frequency: Revenue is received monthly. However, distribution to the state special revenue fund takes place three times per year.

% of Total General Fund Revenue: N/A

Revenue Estimate Methodology:

The estimate for interest and income from the common school trust determines the net amount of revenue that will be deposited to the guarantee account. This means that in addition to estimating the various revenues from the common school trust, estimates of the diversions for DNRC administration costs that reduce the amount of revenue deposited to the guarantee account must also be estimated. Therefore, the estimated amounts shown for this revenue source are not total revenues, but are net of diversions.

Data

Data from the state accounting system (SABHRS) provide a history of each individual interest and income revenue component from which estimates can be made. Department of Natural Resources and Conservation (DNRC) annual reports and other data provide additional information such as mineral prices and production. DNRC provided data for easement sales and timber harvest volumes. IHS provides future estimates of West Texas Intermediate oil and national well head natural gas prices.

Legislative Fiscal Division

Revenue Estimate Profile

Common School Interest and Income

Analysis

The estimate is derived by first estimating the revenue components and then estimating the amounts of the diversions.

Revenue Components

1. Agricultural Fees – Fees are based on a crop share basis. The estimates assume that fees will be the same as the most recent fiscal year for all forecast years.
2. Timber – Estimates of timber harvest revenue from common school trust lands are taken directly from DNRC estimates.
3. Oil & Gas Bonuses – With record highs in energy prices in the past and increased competition to obtain mineral leases, bonus payments have varied substantially. The amount of bonuses in fiscal year 2013, projected at \$2.1 million, is the average of bonus payments from FY 2005 to FY 2011 plus the known amount received in FY 2012 of \$3.578 million. All other years are the average of bonus payments from FY 2005 to FY 2011.
4. Grazing Fees – Rates are tied to the price of cattle, which is expected to be similar to the base year. The amount of fees received in the most recent fiscal year is used in all forecast years.
5. Oil & Gas Leases – For each fiscal year estimated, an average annual growth rate over the previous eight year period was applied.
6. Oil & Gas Penalties – For each fiscal year estimated, the ratio of the previous year’s penalties to the previous year’s oil and gas lease revenue was multiplied by that year’s estimate for oil and gas lease revenue.
7. Miscellaneous Rentals – Due to historical anomalies (FY 2008-2010 due to the Avista river bed lease and the agreement of Arch Coal to pay for the mineral rights to Otter Creek Coal), the amount collected in most recent fiscal year was used for all forecast years.
8. Short-term Investment Pool (STIP) – Because revenue initially deposited in the common school trust is invested on a short-term basis (about one month) before being invested in the T & L fund, a short-term rate is used to calculate the earnings. The short-term rate is a composite of IHS forecasts for the 3-month commercial paper, 3-month treasury bill, and 6-month treasury bill rates.
9. Mineral Royalties – Mineral royalties are received from the mining of oil, natural gas, coal, sand and gravel, and other smaller sources. Since the effects of SB 495 (enacted by the 2001 Legislature effective FY 2002) ended late in FY 2010, mineral royalties are again deposited to the common school trust and become part of the trust corpus. The additional corpus will generate additional earnings. The estimate for mineral royalties is obtained by multiplying together estimates for production, price, and the applicable royalty rate.
 - Production – Oil and natural gas production is estimated by increasing the previous fiscal year’s production by the growth rate obtained from a two-year average of the estimates for statewide oil and natural gas production (see the Oil and Natural Gas Production Tax profile). Coal production on state lands comes primarily from a single coal company with minor amounts from another company. Calendar year information on projected production and percentage of production on state lands was obtained by surveying coal companies, including

Legislative Fiscal Division

Revenue Estimate Profile

Common School Interest and Income

the companies producing on state lands, from which the amount of production on state lands is derived. Fiscal year production is obtained by averaging production for the current and previous calendar years. All other mineral production was held constant at the amount of gravel royalty collection in the base year.

- Price – Oil prices are calculated by increasing the previous year’s Montana price by the growth between the average West Texas Intermediate price estimates obtained from IHS for the four quarters of the same fiscal years. The same methodology is used for natural gas with the driving factor being the IHS estimated national well head price. Coal price is determined by increasing the previous fiscal year’s price by a growth rate obtained from a two-year average of the calendar year estimates for Montana coal prices (see the Coal Severance Tax profile).

10. Trust and Legacy Earnings – The monetary assets of the common school trust are pooled with monetary assets of other land trusts (termed “Trust and Legacy”) and invested by the Board of Investment in the trust funds bond pool. Based on the number of shares each trust owns, a share of the earnings is deposited in each trust. For the common school trust, the actual FY 2012 share of 93.0267% is used. The pool balance grows when permanent revenue is deposited from the various land trust, including the common school trust. However, due to the ending of SB 495 in FY 2010, mineral royalties (permanent revenue) once again are added to the balance. The estimation of the total pool earnings is a three stage process:

- Earnings from new deposits – This additional money initially earns interest at the short-term rate before it is invested in a longer term investment. Also included in these calculations are short-term earnings from the average balance in the common school Land Bank Trust Fund.
- Earnings from existing balance – The majority of these funds have been invested in bonds purchased over the past several years and average a return rate of 4.7%.
- Non-portfolio earnings – Money not invested in the trust funds bond pool earns interest at the short-term rate.

Once the total amount of the pool earnings has been estimated by summing the above three items, the common school share of 93.0267% is applied.

Diversions

Diversions fund operational costs in DNRC, but reduce the amount of permanent and distributable revenue that would have been deposited to the common school trust or distributed to the trust beneficiaries. To determine future diversion amounts, estimates provided by DNRC were used. These estimates relied entirely on distributable revenue to fund the costs (See the trust land administration account below).

- Trust Land Administration Account – The total expenditures requested to be made from this account can be funded from distributable revenue, permanent revenue, or a combination of the two. It is up to the DNRC to decide. If permanent revenue is chosen, the corpus of the trust will not grow as rapidly as it would have and interest earnings from the trust will be less. If distributable revenue is chosen, the amount deposited to the guarantee account to fund public schools will be less, thus requiring more funding from the general fund.

Legislative Fiscal Division

Revenue Estimate Profile

Common School Interest and Income

Adjustments and Distribution

Once total revenue and total diversions have been estimated, the amounts are distributed:

- 95% of the distributable interest and income (excluding a portion of timber revenue) net of diversions is deposited to the guarantee account and the remaining 5% is returned to the permanent trust fund. The money deposited to the guarantee account is used to fund public schools.
- The value received from timber sales over 18 million board feet is distributed to the school facility and technology account. The amount of money distributed to the account in one year is spent in the next year.

Revenue Estimate Profile

Cultural Trust Interest

Revenue Description: Beginning in FY 1976, a portion of coal severance tax revenue was deposited into the Parks Acquisition and Arts Protection trust fund. The 1991 Legislature split the principal of this trust into two separate trusts, the Parks Acquisition trust and the Arts Protection trust (cultural trust), with coal severance taxes allocated to each one. The 1997 Legislature appropriated \$3.9 million from the cultural trust fund for the immediate purchase of Virginia and Nevada City properties. This action resulted in a loss of trust interest revenue that otherwise would be used to fund cultural and aesthetic (C&A) projects in the state during the 1999 biennium. Thus, beginning July 1, 1997, and ending June 30, 1999, 0.87% in coal severance tax revenue was allocated to an account in the state special revenue fund to compensate for the lost interest earnings and the previous 0.63% distribution of coal severance tax to the cultural trust was eliminated. Except for FY 2003, beginning July 1, 1999, the amount of 0.63% is once again statutorily allocated to the cultural trust, the interest from which is to be used for the purpose of protection of works of art in the capitol and for other cultural and aesthetic projects. The August 2002 special legislative session eliminated the allocation for FY 2003 only. In HB 9, the 2005 Legislature transferred \$3,412,500 from the general fund to the trust and the 2007 Legislature transferred \$1,500,000 from the general fund to the trust. Both these actions increase the earnings from the trust.

Revenue Estimate Methodology:

Data

The data used to estimate the interest and earnings of the cultural trust are collected from the Board of Investments (BOI), IHS, and the state accounting system (SABHRS). The BOI provides historic interest earnings from the trust as well as the gains and losses from the sale of investment instruments. Projections of interest rates are provided by IHS, and historic earnings are provided from SABHRS. No adjustments are required on the raw data in preparation for analysis.

Analysis

The cultural trust, formed in the late 1970's, was created from distributions of the coal severance tax. The cultural trust receives coal tax distributions at the rate of 0.63% of the total tax. In several years of budget stress, the coal tax distribution to the cultural trust was temporarily eliminated or reduced. The principal of the trust was reduced by \$3.9 million in FY 1997 and the funds were used for the purchase of Virginia and Nevada Cities. In FY 2006, the trust was reimbursed for \$3.4 million, substantially increasing the principal of the trust, as shown in the figure below.

Legislative Fiscal Division

Revenue Estimate Profile

Cultural Trust Interest

To forecast the cultural trust interest earnings, each of three interest/income components are estimated independently and combined. The estimated interest/income components include:

- The trust funds bond pool (TFBP)
- The short term investment pool (STIP)
- New trust deposits

The TFBP was formed in 1995 to manage the fixed investments held in the state’s major trust funds. TFBP earnings are the largest source of earnings for the trust. The TFBP earnings are estimated by applying a long-term interest rate to the projected TFBP balance. The applicable long term rate is an average of four rates projected by IHS: the corporation Aaa bond rate, the corporate Baa bond rate, the rate on 10-year treasury bonds, and the rate on 30-year treasury bonds.

STIP interest is earned on the temporary investment of trust funds. Funds are acquired from activities such as new deposits and investment sales. Funds are held in STIP until the BOI determines that conditions are favorable for deposit in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on IHS projections of the interest rates on three and six-month corporate loans and three and six-month treasury bills.

The 0.63% coal severance tax distribution to the cultural trust is considered new deposits. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the coal tax transfer, the funds are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

Revenue Estimate Profile

Deaf and Blind Trust Interest and Income

Revenue Description: Lands granted by the federal government to the state for the benefit of public schools and various state institutions generate income. These lands produce revenue through rents or crop shares for agricultural purposes, royalties from the sale of mineral rights, and sales of timber. Income from certain portions of public school/institution lands has been designated for support of the School for the Deaf and Blind. Thus, some of these funds are deposited into a component of the trust and legacy trust fund referred to as the Deaf and Blind trust, which generates interest earnings for the state. As of October 1, 1995, all fixed-income investments held by the state's major trust funds were transferred to a newly-created Trust Funds Bond Pool (TFBP). The majority of trust and legacy trust funds are invested as part of the TFBP. Some funds, however, are invested on a short-term basis in the state's Short Term Investment Pool (STIP). The state constitution prohibits the investment of the permanent trust in common stock.

With the enactment of SB 65 by the 2009 Legislature, up to 25% of Deaf and Blind trust revenue can be diverted to the trust land administration account to fund Department of Natural Resources and Conservation (DNRC) administration costs. This revenue can include distributable revenue, mineral royalties, and timber revenue. Diversions reduce the amount of revenue distribute to the trust beneficiaries. Revenue diverted from the Deaf and Blind permanent trust fund reduces the growth of the trust balance and, hence, reduces the amount of distributable interest earnings. The legislation was effective July 1, 2009.

Statutory Reference:

Tax Rate – NA
Distribution (MCA) – 20-8-110
Enabling Act, Sections 11 & 17
Other (MCA) – DNRC trust land administration diversion (77-1-108 & 109)
DNRC land bank administration diversion (77-2-362)

Applicable Tax Rate(s): N/A

Distribution: Interest and income from the trust, net of amounts to fund DNRC administration, are allocated to the School for the Deaf and Blind.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

Revenue Estimate Methodology:

The estimate for interest and income from the Deaf and Blind trust determines the net revenue that will be distributed to the trust beneficiary. This means that in addition to estimating the various distributable revenues from the trust, estimates of the diversions that reduce the amount of distributable or permanent revenue must also be estimated. Therefore, the estimated amounts shown for this revenue source are not total revenues, but are net of diversions. Permanent revenue (revenue that is not distributed, but remains in the trust such as from mineral royalties), is estimated as part of the entire Trust and Legacy account (T & L) and earnings are apportioned to this trust according to the number of shares owned.

Legislative Fiscal Division

Revenue Estimate Profile

Deaf and Blind Trust Interest and Income

Data

Data from the state accounting system (SABHRS) provide a history of each individual interest and income revenue component from which estimates can be made. Department of Natural Resources and Conservation (DNRC) annual reports and other data provide additional information such as mineral production and timber estimates. Estimates for diversion amounts were provided by DNRC and used for the forecast years.

Analysis

The estimate is derived by first estimating the distributable revenue components and then estimating the amounts of the diversions.

Revenue Components

- Trust and Legacy Earnings (see the figure below) – The monetary assets of the trust are pooled with monetary assets of other land trusts in the T & L and invested by the Board of Investment in the trust funds bond pool. Based on the number of share each trust owns, a share of the earnings is deposited in each trust. The Deaf and Blind trust share is 0.8%. The total pool earnings is a sum of the following:
 - Earnings from new deposits – New deposits in the pool initially earn interest at the short-term rate before it is invested in a longer term investment.
 - Earnings from existing balance – The majority of these funds have been invested in bonds purchased over the past several year and average a return rate of 5.2%.
 - Non-portfolio earnings – Money not invested in the trust funds bond pool earns interest at the short-term rate.
Once the total amount of the pool earnings has been estimated by summing the above three items, the Deaf and Blind trust share of 0.8% is applied.

Legislative Fiscal Division

Revenue Estimate Profile

Deaf and Blind Trust Interest and Income

2. Grazing Fees – Rates are tied to the price of cattle, which is expected to be similar to the most recent fiscal year. Therefore, the amount of fees received in the base year is used in all forecast years.
3. Miscellaneous Rentals - These are small income components that are combined and estimated together. For each fiscal year estimated, the estimate is based on a 10-year average annual growth rate.
4. Agricultural Fees – Fees are based on a crop share basis. Commodity prices are expected to be similar to the most recent fiscal year; therefore, the fees received in the base year are used in all forecast years.
5. Oil & Gas Leases – For each fiscal year estimated, the estimate is the average of the previous two years.

Diversions

1. Diversions fund administration costs in DNRC, but reduce the amount of revenue distributed to the trust beneficiaries or permanent revenue deposited to the trust fund. To determine future diversion amounts, estimates from the DNRC were used for all forecast years. All the costs are funded with distributable revenue.

Adjustments and Distribution

Once total revenue and total diversions have been estimated, the net amounts are distributed to the state special revenue fund.

Economic Development Trust Interest

Revenue Description: Article IX, Section 5 of the Montana Constitution requires that 50% of all coal severance tax revenue be deposited in a permanent coal trust fund and that the principal of the trust "shall forever remain inviolate unless appropriated by a three-fourths vote of each house". Coal severance tax funds flowing into the trust fund are first used to secure and subsidize state bonds issued to finance water resource and renewable resource development projects and activities. With the enactment of House Bill 249 by the 2005 Legislature, beginning FY 2006 the remaining funds are then split 50% (25% of total revenue) to the treasure state endowment trust fund, 25% (12.5% of total revenue) to the treasure state endowment regional water system trust fund, and 25% (12.5% of total revenue) to the big sky economic development trust fund. The permanent trust fund no longer receives coal severance tax revenue.

As of October 1, 1995, all fixed-income investments held by the state's major trust funds were transferred to a newly-created trust funds bond pool (TFBP). The majority of permanent coal tax trust funds are invested as part of the TFBP. Some funds, however, are invested on a short-term basis in the state's short-term investment pool (STIP). In addition, state law provides that trust funds may be used for in-state commercial loans to stimulate economic development. The deposits of coal severance tax revenue to this fund terminate the end of FY 2025.

Statutory Reference:

- Tax Rate – NA
- Distribution (MCA) – 17-5-703 (5b); use of earnings (90-1-205)
- Date Due (MCA) – monthly (17-5-703(5b))

Applicable Tax Rate(s): N/A

Distribution: Interest earnings are deposited to a state special revenue fund and are statutorily appropriated to the Department of Commerce to pay administrative expenses with the remainder for:

1. 75% to local governments to be used for job creation; and
2. 25% to certified regional development corporations and economic development organizations

Revenue Estimate Methodology:

Data

The data used to estimate interest earnings from the big sky economic trust are obtained from the Board of Investments (BOI), IHS, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by IHS and historic interest collections are obtained from SABHRS.

Analysis

The economic trust was created from distributions of the coal severance tax. The economic trust was formed in FY 2006 as a sub-trust to the permanent coal trust. The Constitution requires that 50% of the coal severance tax collections be distributed to the coal trust, and 25% of that distribution (after the water bond debt service obligation is met) or 12.5% of total coal severance tax revenues is distributed to the Big Sky Economic Development trust.

To forecast the economic trust interest earnings, each of the following three interest/income components are estimated independently and combined:

- Trust funds bond pool (TFBP)
- Short-term investment pool (STIP)
- New trust deposits

The TFBP was formed in 1995 to manage the fixed investments held in the state's major trust funds. Each trust owns "shares" of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable new long-term rate for these securities is based on an average of four long-term rates projected by IHS.

Legislative Fiscal Division

Revenue Estimate Profile

Economic Development Trust Interest

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on IHS projections of three short-term investments.

Coal severance tax distributions to the trust are considered new deposits. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the coal tax transfer, the funds are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

Parks Trust Interest

Revenue Description: Beginning in FY 1976, a portion of coal severance tax revenue was deposited into the Parks Acquisition and Arts Protection trust fund. The 1991 Legislature split the principal of this trust into two separate trusts, the Parks Acquisition trust (parks trust) and the Arts Protection trust (cultural trust), with coal severance taxes allocated to each one. Except for FY 2003, the amount of 1.27% of coal tax revenues is statutorily allocated to the parks trust for the purpose of parks acquisition or management. The August 2002 special legislative session eliminated the allocation for FY 2003 only. Income from the parks trust must be appropriated for the acquisition, development, operation, and maintenance of state parks, state recreational areas, state monuments, and state historical sites under control of the Department of Fish, Wildlife and Parks.

Statutory Reference:

Tax Rate – NA
Distribution (MCA) – 15-35-108(4)
Date Due – NA

Applicable Tax Rate(s): N/A

Distribution: Interest earnings on the parks trust are allocated to the Department of Fish, Wildlife, and Parks and deposited to a state special revenue fund.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

Revenue Estimate Methodology:

Data

The data used to estimate interest earnings from the parks trust are obtained from the Board of Investments (BOI), IHS, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by IHS and historic interest collections are obtained from SABHRS.

Analysis

The parks trust, formed in the late 1970's, was created from distributions of the coal severance tax. The parks trust receives coal tax distributions at the rate of 1.27% of the total tax. In one year of budget stress, the coal tax distribution to the parks trust was temporarily eliminated.

To forecast the parks trust interest earnings, each of the following three interest/income components are estimated independently and combined:

- Trust funds bond pool (TFBP)
- Short-term investment pool (STIP)
- New trust deposits

Legislative Fiscal Division

Revenue Estimate Profile

Parks Trust Interest

The TFBP was formed in 1995 to manage the fixed investments held in the state's major trust funds. Each trust owns "shares" of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable long-term rate for these securities is based on an average of four long-term rates projected by IHS.

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on IHS projections of three short-term investments.

The 1.27% coal severance tax distribution to the parks trust is considered new deposits. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the coal tax transfer, the funds are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

Revenue Estimate Profile

Pine Hills Interest and Income

Revenue Description: Lands granted by the federal government to the state for the benefit of public schools and various state institutions generate income. These lands produce revenue through rents or crop shares for agricultural purposes, royalties from the sale of mineral rights, and sales of timber. Income from certain portions of public school/institution lands has been designated for the support of the Pine Hills youth correctional facility. Thus, some of these funds are deposited into a component of the trust and legacy trust fund referred to as the Pine Hills trust, which generates interest earnings for the state. As of October 1, 1995, all fixed-income investments held by the state's major trust funds were transferred to a newly-created Trust Funds Bond Pool (TFBP). The majority of trust and legacy trust funds are invested as part of the TFBP. Some funds, however, are invested on a short-term basis in the state's Short Term Investment Pool (STIP). The state constitution prohibits the investment of the permanent trust in common stock.

With the enactment of SB 65 by the 2009 Legislature, up to 25% of Pine Hills revenue can be diverted to the trust land administration account to fund Department of Natural Resources and Conservation (DNRC) administration costs. This revenue can include distributable revenue, mineral royalties, and timber revenue. Diversions reduce the amount of revenue distribute to the trust beneficiaries. Revenue diverted from the Pine Hills permanent trust fund reduces the growth of the trust balance and, hence, reduces the amount of distributable interest earnings. The legislation was effective July 1, 2009.

Statute:

- Tax Rate – NA
- Distribution (MCA) – 17-3-1003
- Enabling Act, Sections 11 & 17
- Other (MCA) – DNRC trust land administration diversion (77-1-108 & 109)
DNRC land bank administration diversion (77-2-362)

Applicable Tax Rate(s): N/A

Distribution: Interest and income from the trust, net of amounts to fund DNRC administration, is allocated to the Department of Corrections for support of the Pine Hills youth correctional facility.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

Revenue Estimate Methodology:

The estimate for interest and income from the Pine Hills trust determines the net amount of revenue that will be distributed to the trust beneficiary. This means that in addition to estimating the various distributable revenues from the Pine Hills land grant trust, estimates of the diversions that reduce the amount of distributable revenue must also be estimated. Therefore, the estimated amounts shown for this revenue source are not total revenues, but are net of diversions. Permanent revenue (revenue that is not distributed, but remains in the trust such as from timber and mineral royalties), is estimated as part of the entire Trust and Legacy account (T & L) and earnings are portioned to this trust according to the number of shares owned.

Legislative Fiscal Division

Revenue Estimate Profile

Pine Hills Interest and Income

Data

Data from SABHRS provide a history of each individual interest and income revenue component. Department of Natural Resources and Conservation (DNRC) annual reports and other data provide additional information such as production and timber estimates.

Analysis

The estimate is produced by estimating the distributable revenue components and then subtracting the diversions.

Revenue Components

- Trust and Legacy Earnings (see the figure below) – The monetary assets of the trust are pooled with monetary assets of other land trusts in the T & L and invested by the Board of Investment in the trust funds bond pool. Based on the number of share each trust owns, a share of the earnings is deposited in each trust. For the Pine Hills trust, the share is 0.8%. Total pool earnings is a sum of the following:
 - Earnings from new deposits – New deposits initially earns interest at the short-term rate before it is invested in a longer term investment.
 - Earnings from existing balance – The majority of these funds have been invested in bonds purchased over the past several years and average a return rate of 5.2%.
 - Non-portfolio earnings – Money not invested in the trust funds bond pool earns interest at the short-term rate.
 Once the total amount of the pool earnings has been estimated by summing the above three items, the Pine Hills trust share of 0.8% is applied.

Legislative Fiscal Division

Revenue Estimate Profile

Pine Hills Interest and Income

2. Grazing Fees – Rates are tied to the price of cattle, which is expected to be similar to the most recent fiscal year. Therefore, the amount of fees received in the base year is used for all forecast years.
3. Miscellaneous Rentals – These are small income components that are combined and estimated together. For each fiscal year estimated, the estimate is based on a 10-year average growth rate.
4. Agricultural Fees – Fees are based on a crop share basis. Commodity prices are expected to be about the same as the most recent fiscal year, resulting in similar returns. Therefore, fees received in the base year are used for all forecast years.
5. Oil & Gas Leases – For each fiscal year estimated, the estimate is the average of the previous two years.
6. Oil & Gas Bonuses & Penalties –No bonuses are anticipated in the forecast period. Future penalties are estimated at the same level of the most recent fiscal year.

Diversions

Diversions fund operational costs in DNRC, but reduce the amount of revenue distributed to the trust beneficiaries. To determine future diversion amounts, DNRC estimates are for all forecast years are used. All the costs are funded with distributable revenue.

Adjustments and Distribution

Once total revenue and total diversions have been estimated, the net amounts are distributed to the state special revenue fund.

Revenue Estimate Profile

Regional Water Trust Interest

Revenue Description: The 1999 Legislature (Senate Bill 220) created the Treasure State Endowment (TSE) Regional Water System Fund within the permanent coal tax trust fund. The fund receives 12.5% of total coal severance tax collections through June 2016. Interest earned on the fund is used to provide matching funds to plan and construct regional drinking water systems in Montana and fund state and local entity administrative expenses. Except for administrative expenses, each state dollar must be matched equally by local funds. The funds in the account are further restricted to finance regional drinking water systems from the waters of the Tiber reservoir and the Missouri River within specific geographic areas. The deposit of coal severance tax revenue to this fund terminates the end of FY 2020.

Statutory Reference:

Tax Rate – NA
Distribution (MCA) – 17-5-703 (4b); use of earnings (90-6-715)
Date Due (MCA) – monthly (17-5-703(4d))

Applicable Tax Rate(s): NA

Distribution: Interest earnings are deposited to a state special revenue fund and appropriated to the Department of Natural Resources and Conservation to fund eligible projects and pay administrative expenses.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

Revenue Estimate Methodology:

Data

The data used to estimate interest earnings from the regional water trust are obtained from the Board of Investments (BOI), IHS, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by IHS and historic interest collections are obtained from SABHRS.

Analysis

The regional water trust was created from distributions of the coal severance tax. The regional water trust was formed in 2000 as a sub-trust to the permanent coal trust. The Constitution requires that 50% of the coal severance tax collections be distributed to the coal trust, and 25% of that distribution (after the water bond debt service obligation is met) or 12.5% of total coal severance tax revenues is distributed to the regional water trust.

To forecast the regional water trust interest earnings, each of three interest/income components are estimated independently and combined. The estimated interest/income components include:

- Trust fund bond pool (TFBP)
- Short-term investment pool (STIP)
- New trust deposits

Legislative Fiscal Division

Revenue Estimate Profile

Regional Water Trust Interest

The TFBP was formed in 1995 to manage the fixed investments held in the state’s major trust funds. Each trust owns “shares” of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable long-term rate for these securities is based on an average of four long-term rates projected by IHS.

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on IHS projections of three short-term investments.

Coal severance tax distributions to the regional water trust are considered new deposits. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the coal tax transfer, the funds are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

Resource Indemnity Trust Interest

Revenue Description: Article IX, Section 2 of the Montana Constitution and Title 15, Chapter 38, MCA, requires that certain resource extraction taxes, as determined by the legislature, be placed in a trust. The principal of the Resource Indemnity Trust (RIT) "shall forever remain inviolate in an amount of one hundred million dollars (\$100,000,000), guaranteed by the state against loss or diversion." Once the principal of the trust reaches \$100 million, any additional tax deposits may be appropriated. Interest earnings on the RIT are to be spent to improve the total environment and rectify damage to the environment. It is also the legislature's intent that the use of interest earnings for operations of state government be minimized.

On July 1, 2002 the Governor by executive order certified to the Secretary of State that the RIT balance had reached \$100 million. In prior years, the RIT had received revenue from the resource indemnity and ground water assessment tax and the oil and gas tax. Because these allocations of revenue are no longer deposited to the trust, the trust balance will remain constant and interest earnings will be dependent only on the interest rates.

Statutory Reference:

Tax Rate – NA

Distribution (MCA) – Montana Constitution, Article IX, Section 2; 15-38-202(2), use of earnings (15-38-203)

Date Due – NA

Applicable Tax Rate(s): N/A

Distribution: Statute allocates RIT interest earnings in the following manner:

- 1) At the beginning of the biennium, an amount not to exceed \$50,000 to the oil and gas mitigation account to bring the balance up to \$200,000. Money in this account is statutorily appropriated to the Board of Oil and Gas Conservation for the cost of plugging wells that have been abandoned and for which no responsible party can be found;
- 2) At the beginning of the biennium, \$500,000 to the water storage state special revenue account to provide loans and grants for water storage projects;
- 3) At the beginning of the biennium, \$175,000 to the environmental contingency fund which is statutorily appropriated upon authorization of the Governor for unanticipated public needs arising from certain disasters and emergencies;
- 4) \$3.5 million annually to the natural resources projects state special revenue account for distribution as grants;
- 5) \$300,000 annually to the ground water assessment account to improve ground water management and protection;
- 6) \$500,000 annually to the future fisheries program for bull trout and cutthroat trout recovery; and
- 7) of the remaining RIT interest earnings: a) 65% to the natural resources operations state special revenue account for program and administrative costs; b) 26% to the hazardous waste/CERCLA state special revenue account for superfund activities; and c) 9% to the environmental quality protection state special revenue fund for additional clean-up activities.

The Department of Natural Resources and Conservation administers two of the RIT interest accounts which are used for grants, loans, and administrative costs: the renewable resource grant and loan program account and the reclamation and development grant account. These accounts also receive funding from other sources. All grants and loans made from these accounts require legislative approval. Grants must also be appropriated.

Legislative Fiscal Division

Revenue Estimate Profile

Resource Indemnity Trust Interest

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

Revenue Estimate Methodology:

Data

The data used to estimate interest earnings from the resource indemnity (RIT) trust are obtained from the Board of Investments (BOI), IHS, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by IHS and historic interest collections are obtained from SABHRS.

Analysis

The RIT trust, formed in the mid 1970's, was created from distributions of the resource indemnity and ground water assessment tax (RIGWA) and the oil and gas tax. The resource indemnity trust reached its constitutionally required principal of \$100 million in FY 2002. As a result, the trust no longer receives new income from tax distributions. The principal or corpus of the resource indemnity trust now stands at \$100 million, as shown by the line in the figure below. No new deposits are anticipated for the trust.

Legislative Fiscal Division

Revenue Estimate Profile

Resource Indemnity Trust Interest

To forecast the resource indemnity trust interest earnings, each of the following three interest/income components are estimated independently and combined:

- Trust funds bond pool (TFBP)
- Short-term investment pool (STIP)
- New trust deposits (if anticipated)

The TFBP was formed in 1995 to manage the fixed investments held in the state’s major trust funds. Each trust owns “shares” of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable long-term rate for these securities is based on a two-year average of four long-term rates projected by IHS. The applicable rates are multiplied by the trust balance to determine earnings.

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on IHS projections of three short-term investments. Because no new deposits are anticipated for the trust, STIP earnings are projected for only non-pool balances.

Revenue Estimate Profile

Tobacco Trust Interest

Revenue Description: Due to passage of Montana Constitutional Amendment 35 by the electorate in November 2000, the legislature is required to dedicate not less than 40% of tobacco settlement money to a permanent trust fund. Initially, the legislature did not determine the exact percentage to be deposited to the trust fund; the revenue estimate assumes 40%. Since the passage of Initiative 146 by the electorate in November 2002, 32% of the tobacco settlement money is to fund tobacco prevention and 17% is to fund the Children’s Health Insurance Program. As amended in SB 485 by the 2003 Legislature, money from these allocations can also be used to fund human services programs and to match federal Medicaid funds through FY 2005. The remaining 11% of the money is deposited to the general fund. Interest earnings from the trust can only be used for tobacco disease prevention programs and programs providing benefits, services, or coverage that are related to the health care needs of Montanans. HB 743 enacted by the 2007 Legislature added chronic disease programs to the definition of tobacco disease prevention programs. The earnings cannot be used to replace state or federal money used to fund tobacco disease prevention programs and state programs that existed on December 31, 1999, providing benefits, services, or coverage of the health care needs of Montanans.

Legislative Fiscal Division

Revenue Estimate Profile

Tobacco Trust Interest

Revenue Estimate Methodology:

Data

The data used to estimate interest earnings from the tobacco settlement trust are obtained from the Board of Investments (BOI), IHS, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by IHS and historic interest collections are obtained from SABHRS.

Analysis

The tobacco settlement trust, formed in 2000, was created from distributions of the tobacco settlement funds. In 2000, as required by constitutional amendment, the state began depositing 40% of the tobacco settlement funds into a trust. As required in statute, 10% of the trust earnings must be deposited in the trust.

To forecast the tobacco settlement trust interest earnings, each of the following three interest/income components are estimated independently and combined:

- Trust funds bond pool (TFBP)
- Short-term investment pool (STIP)
- New trust deposits

The TFBP was formed in 1995 to manage the fixed investments held in the state’s major trust funds. Each trust owns “shares” of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable new long-term rate for these securities is based on an average of four long-term rates projected by IHS.

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on IHS projections of three short-term investments.

The 40% distribution of tobacco settlement funds and 10% of retained interest earnings are considered new deposits in the tobacco settlement trust. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the tobacco settlement funds, they are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

Treasure State Endowment Trust Interest

Revenue Description: In the June 1992 election, voters approved a referendum to create the Treasure State Endowment Fund (TSEF) within the permanent coal tax trust fund. The TSEF received a \$10 million grant from the permanent trust principal in FY 1994 and received 37.5% of total coal severance tax collections from July 1999 through June 2003. Beginning FY 2004, the trust receives 25% of total collections. Interest earned on the TSEF is used to finance local infrastructure projects, as prioritized by the departments of Commerce and Natural Resources and Conservation and authorized by the legislature via the Treasure State Endowment Program (TSEP). The deposit of coal severance tax revenue to this fund terminates the end of 2020.

Statutory Reference:

Tax Rate – NA
Distribution (MCA) – 17-5-703 (4c); use of earnings (90-6-701(2))
Date Due (MCA) – Monthly (17-5-703 (4c))

Applicable Tax Rate(s): N/A

Distribution: Interest earnings are allocated to the Department of Commerce to fund TSEP.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

Revenue Estimate Methodology:

Data

The data used to estimate interest earnings from the treasure state endowment (TSE) trust is obtained from the Board of Investments (BOI), IHS, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by IHS and historic interest collections are obtained from SABHRS.

Analysis

The TSE trust was created from distributions of the coal severance tax. The TSE trust was formed early in the 1990's as a sub-trust to the permanent coal trust. The Constitution requires that 50% of the coal severance tax collections be distributed to the coal trust, and 50% of that distribution (after the water bond debt service obligation is met) or 25% of total coal severance tax revenues is distributed to the TSE trust.

To forecast the TSE trust interest earnings, each of the following four interest/income components are estimated independently and combined:

- Trust funds bond pool (TFBP)
- In-state investments
- Short-term investment pool (STIP)
- New trust deposits

Legislative Fiscal Division

Revenue Estimate Profile

Treasure State Endowment Trust Interest

The TFBP was formed in 1995 to manage the fixed investments held in the state’s major trust funds. Each trust owns “shares” of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable new long-term rate for these securities is based on an average of four long-term rates projected by IHS.

Earnings from in-state investments have historically been the second largest source of income to the TSE trust. The BOI is required by statute to invest 25% of coal tax trust in the Montana economy. Investments must be made to maximize the long-term benefit to the Montana economy. In-state investments primarily consist of loans to Montana business entities and earnings are equal to the interest charged on the loans. In the 2015 biennium, the average loan rate is forecast to be 4.1%.

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on IHS projections of three short-term investments.

Coal severance tax distributions to the TSE trust are considered new deposits. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the coal tax transfer, the funds are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

Revenue Estimate Profile

Treasury Cash Account Interest

Revenue Description: The Department of Commerce, Board of Investments is responsible for investing all state funds. Title 17, Chapter 6, MCA, provides guidelines under which the funds must be invested. Unless specifically stated by statute, all interest earned on these investments is deposited in the general fund. Treasury cash is invested in a mixture of short and medium-term investments. Consequently, the interest assumptions adopted by the legislature incorporate a blend of short and intermediate-term rates. When needed to address cash flow problems, the state typically issues tax and revenue anticipation notes (TRANS). The legislature would then adopt TRANS issuance assumptions, since this affects the average invested balance. No TRANS issues are anticipated in the 2015 biennium.

Statutory Reference:

Tax Rate – NA

Distribution (MCA) – 17-6-202(2)

Date Due – interest deposits are mostly made monthly, with two in June and none in July

Applicable Tax Rate(s): N/A

Distribution: All investment earnings on the treasury cash account (TCA) are deposited into the general fund.

Distribution Chart:

Collection Frequency: On-going

% of Total General Fund Revenue:

FY 2004 – 0.46%	FY 2007 – 1.85%	FY 2010 – 0.17%
FY 2005 – 0.66%	FY 2008 – 1.57%	FY 2011 – 0.14%
FY 2006 – 1.09%	FY 2009 – 0.86%	FY 2012 – 0.14%

Revenue Estimate Methodology:

Excess cash in the state treasury is deposited to the treasury cash account (TCA) and invested in short and medium-term investments. Earnings are dependent on the investable cash balance and interest rates. Investment earnings are deposited to the general fund.

Data

The Board of Investments provides monthly reports on the treasury cash account balance. The state accounting system (SABHRS) provides information on monthly investment earnings.

Analysis

The average balance of the TCA is estimated by increasing the previous year's balance by half the difference between the anticipated general fund balances for the past and current years. When cash flow is insufficient, tax revenue anticipation notes (TRANS) are issued to meet short-term cash flow needs. The term of the loan and amount borrowed are used to determine the amount to be added to the average balance calculations. No TRANS issues are anticipated in the 2015 biennium.

Legislative Fiscal Division

Revenue Estimate Profile

Treasury Cash Account Interest

Short-term interest rates are estimated by based on a composite rate of IHS forecasts for the 3-month commercial paper, 3-month treasury bill, and 6-month treasury bill rates.

The average TCA balance multiplied by the composite interest rate produces total fiscal year revenue.

Adjustments and Distribution

Once total revenue for each fiscal year is determined, the distribution percentage, 100% to the general fund, is applied.

Revenue Estimate Profile

Beer Tax

Revenue Description: A tax is levied on each barrel of beer (31 gallons) produced in or imported into Montana based on the amount produced. A portion of the revenue from the beer tax is returned to Native American tribes per an agreement between the Department of Revenue (DOR) and the tribes.

Statutory Reference:

Tax Rate (MCA) – 16-1-406

Distribution (MCA) – 16-1-406

Date Due – end of the month and collected in the next month (16-1-406(2))

Applicable Tax Rate(s): The per-barrel tax varies based on barrels of production:

up to 5,000 barrels - \$1.30

5,001 to 10,000 barrels - \$2.30

10,001 to 20,000 barrels - \$3.30

over 20,000 barrels - \$4.30

Distribution: Beer tax revenue is distributed 76.7% to the general fund and 23.3% to the DPHHS state special revenue alcohol account. The general fund portion is reduced by the amount of the tribal distribution.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue:

FY 2004 – 0.21%

FY 2007 – 0.17%

FY 2010 – 0.19%

FY 2005 – 0.19%

FY 2008 – 0.16%

FY 2011 – 0.17%

FY 2006 – 0.17%

FY 2009 – 0.17%

FY 2012 – 0.16%

Revenue Estimate Methodology:

Data

The beer tax estimate is based on data obtained from DOR and the state accounting system (SABHRS). The DOR data provides details of taxes paid at each of the four incremental tax rates and information on tribal distributions. SABHRS data shows total fiscal year tax collections.

Legislative Fiscal Division

Revenue Estimate Profile

Beer Tax

The DOR data are used to develop an effective tax rate and determine a “proxy” for barrels of beer consumed. The effective tax rate is a weighted average of beer sales by tax rate and is calculated as follows:

$$ETR = (\text{Rate}_{\$4.30} * \% \text{Taxed}_{\$4.30}) + (\text{Rate}_{\$3.30} * \% \text{Taxed}_{\$3.30}) + (\text{Rate}_{\$2.30} * \% \text{Taxed}_{\$2.30}) + (\text{Rate}_{\$1.30} * \% \text{Taxed}_{\$1.30})$$

In the estimated period, the effective tax rate is \$4.15 per barrel.

SABHRS data are used in conjunction with DOR data to derive the number of taxable barrels sold in the state; total tax collected in each fiscal year divided by the effective tax rate yields the number of taxable barrels.

Analysis

Beer tax data show a constant trend for taxable barrels sold in Montana, as demonstrated in the figure below. The proxy of taxable barrels sold is regressed against Montana retail sales and Montana population over the age of 21 to determine the future taxable barrels of beer that will be sold in Montana.

Adjustment and Distribution

Beer taxes are distributed between two funds: the general fund at 76.7% and the DPHHS alcohol state special revenue account at 23.3%. The general fund distribution is reduced by tribal reimbursements. Three of the seven tribal governments—Blackfeet, Fort Belknap and Fort Peck—receive beer tax dollars. These tribal governments adhere to the Montana beer tax laws. The state of Montana collects the tribes’ portion of the beer tax and quarterly distributes those collections based on a formula (per capita beer consumption times tribal membership times the Montana tax rate).

Cigarette Tax

Revenue Description: The cigarette tax is an excise tax imposed on all cigarettes sold or possessed in Montana. The tax is imposed on the retail consumer, but is collected by wholesalers or retailers through the use of tax insignia. The insignias are purchased from the state and affixed to each package of cigarettes. The tax does not apply to quota cigarettes sold on an Indian reservation. In practice, the tax is levied on all cigarettes and the wholesaler receives a refund for the amount within the quota that has been sold within the boundaries of an Indian reservation. Each tribe's quota is equal to 150.0% of Montana's per capita general fund cigarette tax revenue multiplied by the enrolled tribal member population, or any other amount agreed to in a state-tribal agreement. The state has agreements with five tribes in Montana.

Beginning May 1, 2003, the Fifty-eighth Legislature passed SB 407 increasing the tax on cigarettes to \$0.70 per 20-cigarette package, a 289% increase from the previous \$0.18 tax. Shortly thereafter, the electorate approved I-149 that raised the tax on packs of 20 cigarettes by \$1.00 to \$1.70, beginning January 1, 2005, an increase of 143%. Both SB 407 and I-149 changed the distributor percentage discounts, but the amounts that distributors are allowed to retain for administration of the tax stayed relatively constant. SB 407 changed the distribution of the tax revenues to increase the amount deposited into the state general fund. I-149 increased tax revenues for veterans' nursing home operation and maintenance and provided revenue to a new state special revenue fund for health and Medicaid initiatives. The 2009 Legislature enacted HB 213 and established a new 1.2% distribution only for the 2011 biennium to fund a state veterans' home in southwestern Montana. The 2011 Legislature enacted HB 296 which extended the 1.2% distribution through FY 2015. The distribution to the general fund is reduced by 1.2%.

Note: If the money in the veteran's cigarette account at the end of a fiscal year exceeds \$2.0 million, after reductions for budgeted present law amounts for each fiscal year, the excess is transferred to the general fund as a revenue transfer to the "All Other Revenue" source.

Statutory Reference:

Tax Rate (MCA) – 16-11-111

Tax Distribution (MCA) – 16-11-119

Date Due – within 30 days after purchase of the insignia (16-11-117)

Applicable Tax Rate(s):

- Beginning January 2005, the excise tax on cigarettes is \$1.70 per package of 20 cigarettes, prorated for packages that differ from 20 cigarettes.
- Wholesalers pay a license fee of \$50.00 and each retailer pays a license fee of \$5.00. License fees are renewable each year and are non-transferable. Revenue from these fees is shown in "All Other General Fund Revenue".

Distribution: All wholesaler and retailer license fees are deposited in the general fund. After deductions for tribal refunds, the cigarette tax revenue is distributed:

- The greater of 8.3% or \$2.0 million to DPHHS for veterans' nursing home operation and maintenance
- 2.6% to the long-range building program
- 44.0% for health and Medicaid initiatives and children health insurance
- 1.2% for a veterans' home in southwestern Montana only through FY 2015
- The remainder (43.9%) to the general fund through FY 2015, 45.1% thereafter

FY 2006 – 2.02%	FY 2009 – 1.90%	FY 2012 – 1.68%

Revenue Estimate Methodology:

Data

Data from the state accounting system (SABHRS) and the Department of Revenue (DOR) are used to forecast cigarette tax revenues. The DOR provides information on the number of cigarette insignias (stamps) sold in each month and the amount of discounts given to cigarette distributors. Historic fiscal year tax collections are available through SABHRS.

DOR provides detailed information on the sales of tax insignias by pack size, company, tribal, and month. To prepare the data for analysis, the total number of insignia sales is reduced by discounts and refunds given to the distributor. The resulting amount serves as a proxy for the number of taxable cigarette packs consumed per year. The actual SABHRS data serves as a check against the number of proxy packs of cigarettes calculated.

Analysis

In 1982, the consumption of cigarettes began to decrease as a result of an increased awareness of the health risks associated with smoking. Between 1982 and 2002, cigarette consumption decreased at a rate of almost 2% annually. Each of the two recent tax increases caused consumption to decrease at a greater rate for two years. These decreases forced downward shifts in Montana's consumption curve, as shown in the figure below.

Legislative Fiscal Division

Revenue Estimate Profile

Cigarette Tax

Cigarette consumption in Montana has rebounded following the initial price-related decline, although the long-term trend is still declining. As shown in the figure above, the number of packs consumed increased in FY 2007 and FY 2008 before resuming the downward trend.

Taxable cigarette pack sales are trended against tobacco spending and a tobacco price index to produce a forecast of taxable packs; forecasts for tobacco spending and the tobacco price index are provided by IHS. The current tax rate is applied to the proxy for taxable packs to determine the estimate for gross cigarette tax collections.

Adjustment and Distribution

After estimating the gross cigarette tax collections, the estimates are reduced by the discounts and credits passed on to distributors. The last step in producing the estimate for the cigarette tax is to calculate the tax distributions. First, cigarette tax revenue is reduced by tribal distributions. Five of the seven tribal governments receive cigarette tax dollars: Blackfeet, Fort Belknap, Fort Peck, Chippewa Cree, and Crow. These tribal governments adhere to Montana cigarette tax laws. The state of Montana collects the tribes' portion of the tax and quarterly distributes the collections based on a formula (per capita cigarette consumption times 150% times tribal membership times the Montana tax rate). Finally, the remaining tax revenues are distributed proportionally to the programs funded with cigarette tax revenues and to the general fund.

Diesel Tax

Revenue Description: The Montana Constitution (Article VIII, Section 6) provides that money from taxes on vehicle fuel be used solely for: 1) payment of obligations incurred for construction, reconstruction, repair, operation, and maintenance of public highways, streets, roads, and bridges; 2) payment of county, city, and town obligations on streets, roads, and bridges; and 3) enforcement of highway safety, driver education, tourist promotion, and administrative collection costs. Appropriation of the money for any other use requires a three-fifth vote of each house of the legislature.

There are two sources of revenue associated with the taxation of special fuels (primarily diesel): 1) the main source of revenue is a diesel tax of \$0.2775 per gallon paid to the Department of Transportation (DOT) for every gallon of diesel sold or used in the state; and 2) a tax of \$0.0075 assessed on each gallon of diesel fuel for the purpose of funding petroleum storage tank cleanup.

Distributors are allowed to withhold 1.0% of the diesel tax as an allowance for collecting the tax. In order to prevent the possibility of dual taxation of motor fuels purchased by Montana citizens and businesses on Indian reservations, DOT and Indian tribes may enter into a cooperative agreement. Refunds of the tax paid is provided for commercial vehicle use other than for use on public highways and streets, governmental use, and nonpublic school use for the transportation of pupils.

Statutory Reference:

Tax Rate (MCA) – 15-70-321(2), 75-11-313 (storage tank cleanup)

Tax Distribution (MCA) – 15-70-101(1), 75-11-314 (storage tank cleanup)

Date Due – 25th of the following month (15-70-344(1))

Applicable Tax Rate(s):

1. Diesel (Special) Fuel Tax - \$0.2775 per gallon
2. Petroleum Storage Tank Cleanup Tax - \$0.0075

Distribution: After reductions, diesel tax proceeds are distributed to DOT. The four reductions are: the 1.0% withheld by distributors; administrative expenses and refund amounts deducted by DOT under a tribal agreement (if any) that are deposited in the tribal motor fuels administration account and statutorily appropriated; diesel tax refunds; and amounts refunded through the international fuel tax agreement. Of the amount distributed to DOT, 1/4 of \$0.01 per gallon is allocated specifically to the funding of highway system maintenance.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

Revenue Estimate Methodology:

Data

The data used in the diesel fuel tax estimate are obtained from the state accounting system (SABHRS). The SABHRS data includes a historic series of diesel tax revenues and is used to produce a proxy amount for taxable gallons of diesel sold in Montana.

Legislative Fiscal Division

Revenue Estimate Profile

Diesel Tax

Total diesel taxes are composed of two distinct taxes, the diesel tax and the diesel petroleum storage tank cleanup tax (imposed to cover the cost of storage tank cleanup). Each rate is applied to a proxy for taxable diesel gallons. To create the proxy, the actual tax revenues are increased by refunds and then divided by the effective tax rate. The effective tax rate is created in recognition of the statutory credit provided to diesel distributors for collection and payment of the tax. Under current law, diesel distributors are allowed to keep 1% of the tax on all diesel receipts and must pay 99% of the tax receipts to the state. The effective rate for the forecast period is \$0.2747.

Analysis

Diesel fuel taxes are estimated as separate taxes. First, the diesel tax is imposed on each gallon of diesel sold in the state. A second tax is imposed on all diesel fuel distributed in the state for the purpose of diesel storage tank clean-up costs (storage tank tax). The two taxes are applied to different bases, because the diesel fuel tax provides credits against the cost of the tax to consumers who use the diesel “off highway.” Future growth in diesel fuel consumption is assumed to be at the same rate of growth as in FY 2012. The storage tank tax is expected to follow the same patterns as the diesel fuel tax. The effective diesel fuel tax rates are applied to the estimates to produce the estimate for gross tax revenues.

The figure above shows the actual gallons of diesel fuel sold in Montana between FY 2000 and FY 2012 and the expected sales of diesel fuel for FY 2013 through FY 2015, along with the expected change between the years.

Adjustments

Several adjustments are made to the expected gross diesel fuel tax revenues. Gross tax revenues are reduced by refunds, incentives, DOT administrative costs, and tribal agreements, resulting in the estimate for net diesel fuel tax revenue. No adjustments are required for the storage tank tax. The net tax revenues of the two taxes are combined to determine the estimate for total diesel fuel tax revenue. Finally, the tax revenues are distributed to the various state special revenue accounts as described above.

Gasoline Tax

Revenue Description: The constitution of the state (Article VIII, Section 6) provides that money from taxes on vehicle fuel be used solely for: payment of obligations incurred for construction, reconstruction, repair, operation, and maintenance of public highways, streets, roads, and bridges; payment of county, city, and town obligations on streets roads, and bridges; and enforcement of highway safety, driver education, tourist promotion, and administrative collection costs. Appropriation of the money for any other use requires a three-fifth vote of each house of the legislature.

There are two sources of revenue associated with the taxation of gasoline: the primary source of revenue is a gasoline license tax of \$0.27 per gallon paid to the Department of Transportation (DOT) by every distributor for the privilege of selling gasoline; and a tax of \$.0075 assessed on each gallon of gasoline for the purpose of funding petroleum storage tank cleanup.

Distributors are allowed to withhold 1.0% of the gasoline tax as an allowance for collecting the tax. In order to prevent the possibility of dual taxation of motor fuels purchased by Montana citizens and businesses on Indian reservations, DOT and Indian tribes may enter into a cooperative agreement. Refunds of the tax paid is provided for denaturing alcohol used in gasohol, stationary gasoline engines used off public highways and streets, and commercial vehicle use other than for use on public highways and streets.

Applicable Tax Rate(s):

1. Gasoline License Tax - \$0.27 per gallon
2. Petroleum Storage Tank Cleanup Tax - \$0.0075

Distribution: After reductions for: 1) the 1.0% withheld by distributors; 2) administrative expenses and refund amounts deducted by DOT under a tribal agreement that are deposited in the tribal motor fuels administration account and statutorily appropriated; 3) gasoline tax refunds; and 4) amounts refunded through the international fuel tax agreement, the remainder of the gasoline tax is allocated as follows:

- 9/10 of 1.0% to the state park account
- 15/28 of 1.0% to a snowmobile account in the state special revenue fund. This amount is further allocated 86.0% for general use, 4.33% for enforcement, 8.67% for safety and education, and 1.0% to the noxious weed trust.
- 1/8 of 1.0% to an off-highway vehicle account in the state special revenue fund. This amount is further allocated 90% for general use (including repair of damaged areas) and 10% for safety.
- 1/25 of 1.0% to the aeronautics revenue fund of the Department of Transportation
- 98.3993% to DOT to be used for highway-related purposes, primarily construction projects and administrative costs. One-fourth of \$.01 per gallon is allocated specifically to the funding of highway system maintenance.

Gasoline Tax

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

Revenue Estimate Methodology:

Data

The data used in the gasoline tax estimate are obtained from the state accounting system (SABHRS). The SABHRS data includes a historic series of gasoline tax revenues and is used to produce a proxy amount for taxable gallons of gasoline sold in Montana.

Total gasoline taxes are made up of two distinct taxes, the gasoline tax and the gasoline petroleum storage tank cleanup tax (imposed to cover the cost of storage tank cleanup). Each rate is applied to a proxy for taxable gasoline gallons. To create the proxy, the actual tax revenues are increased by refunds and then divided by the effective tax rate. The effective tax rate is created to adjust for the statutory credit provided to gasoline distributors for collection and payment of the tax. Under current law, gasoline distributors are allowed to keep 1% of the tax on all gasoline receipts and must pay 99% of the tax receipts to the state. The effective rate for the forecast period is \$0.2673.

Analysis

The gasoline tax and the gasoline petroleum storage tank cleanup tax are estimated separately. First, the gasoline tax is imposed on each gallon of gasoline sold in the state. The two taxes are applied to different bases, because the gasoline tax provides credits against the cost of the tax to consumers who use the gasoline “off highway.” Future growth in gasoline consumption is assumed to be at the same rate of growth as in FY 2012. The storage tank tax is expected to follow the same patterns as the gasoline tax. The effective gasoline tax rates are applied to the estimates to produce the estimate for gross tax revenues.

The figure above shows the actual gallons of gasoline sold in Montana between FY 2000 and FY 2012 and the expected sales of gasoline for FY 2013 through FY 2015, along with the expected change between the years.

Adjustments

Several adjustments are made to the expected gross gasoline tax revenues. Gross tax revenues are reduced by refunds, incentives, DOT administrative costs, and tribal agreements, resulting in the estimate for net gasoline tax revenue. No adjustments are required for the storage tank tax. Next, the net tax revenues of the two taxes are combined to determine the estimate for total gasoline tax revenue. Finally, the tax revenues are distributed to the various state special revenue accounts as described above.

Revenue Estimate Profile

GVW and Other Fees

Revenue Description: There are two types of revenue derived from over 20 different sources classified under gross vehicle weight (GVW) and other income: fee revenue and permit revenue. The majority of revenue is derived from a variety of GVW fees, including those fees collected by counties when vehicles are registered. Miscellaneous permits comprise the second income component under this source. Enactment of the federal “Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users” replaces the single state registration system (SSRS) with a new uniform carrier registration program. Elimination of the SSRS (effective January 1, 2007) eliminated the \$5 state fee that was deposited to the general fund. The revenue was replaced with revenue from a federal fee. Montana is expected to receive revenue from this fee in the same amount of the lost SSRS revenue.

Statutory Reference:

Tax Rate – Multiple (Administrative Rules 18.8.202)
Tax Distribution (MCA) – Multiple

Applicable Tax Rate(s): Various

Distribution: The majority of GVW revenue is allocated to the Department of Transportation.

% of Total General Fund Revenue: 0.0% (the general portion is included in “All Other General Fund”)

Revenue Estimate Methodology:

Data

The data used in the gross weight vehicle (GVW) tax estimate are obtained from the state accounting system (SABHRS) and the Department of Transportation (DOT). The SABHRS data provide the historic collection data for the 13 different types of fees and permits. The DOT provides statistics on the number of gross weight vehicle licenses for use in Montana.

Analysis

The state of Montana imposes many fees and requires several types of permits based on the gross weight of commercial and large privately owned vehicles. In preparing the GVW estimate, 13 sources of fees and permit revenues are analyzed. Most of the sources demonstrate a payment history that can be adequately measured by applying a growth rate to a base year. The largest sources of revenue in the GVW are the gross vehicle weight fees collected by both counties and the state. The figure below demonstrates the relative importance of these two sources to the overall GVW collections.

Legislative Fiscal Division

Revenue Estimate Profile

GVW and Other Fees

Both county and state GVW fees are forecast with a compound growth rate with the historical high and low rates removed. The forecast fees are expected to grow by over 1.5% in the next biennium. Another large source of revenue included in the GVW is the fee for overweight vehicles. This fee is estimated with an eight-year moving average growth rate base on changes in the two previous years with the historical high and low rates removed. All other GVW fees, as shown in the figure above, are a collection of 10 different fees and permit types. While each of these fees is estimated separately, in combination the fees are expected to increase at an annual rate of 3% during the biennium, after declining from FY 2012 levels. The estimates for each of the GVW fees and permit collections are combined to produce the total estimate for GVW fees for FY 2013 through FY 2015.

Liquor Excise and License Tax

Revenue Description: The Department of Revenue (DOR) is authorized to sell liquor to retail liquor establishments throughout the state. These sales result in profits and taxes that are deposited in various state accounts. An excise tax is collected both on liquor sold by DOR and liquor purchased outside the state, by airlines and railroads (carriers), for consumption within the state. The department also collects a license tax on the sale of liquor. A portion of the excise tax revenue is returned to Native American tribes through an agreement with DOR.

Statutory Reference:

Tax Rate (MCA) – Excise tax (16-1-401), License tax (16-1-404)

Tax Distribution (MCA) – Excise tax (16-1-401 & 16-2-108), License tax (16-1-404)

Date Due – Excise tax is collected at the time of sale and distributed by the 10th day of each month. License tax is collected at the time of sale.

Applicable Tax Rate(s):

Excise Tax Rate

All liquor sold and delivered in the state by a company that manufactured, distilled, rectified, bottled, or processed the liquor is taxed a percentage rate on the retail selling price based on the following number of proof gallons of liquor nationwide in the calendar year preceding imposition of the tax:

- 3.0% - < 20,000 proof gallons
- 8.0% - 20,000 to 50,000 proof gallons
- 13.8% - 50,001 to 200,000 proof gallons
- 16.0% - Over 200,000 proof gallons

The amount of excise taxes paid by carriers includes additional factors related to departures and passenger miles.

License Tax Rate

- 10.0% of the retail selling price on all liquor sold and delivered in the state by a company that manufactured, distilled, rectified, bottled, or processed and that sold more than 200,000 proof gallons of liquor nationwide in the calendar year preceding imposition of the tax
- 8.6% of the retail selling price on all liquor sold and delivered in the state by a company that manufactured, distilled, rectified, bottled, or processed and that sold not more than 200,000 proof gallons of liquor nationwide in the calendar year preceding imposition of the tax

The license tax must be charged and collected on all liquor brought into the state and taxed by DOR. The retail selling price must be computed by adding to the cost of the liquor the state markup as designated by the department. The license tax must be figured in the same manner as the state excise tax and is in addition to the state excise tax.

Distribution:

Excise tax revenue, less amounts distributed to the tribes, is deposited in the enterprise fund for transfer to the general fund.

License tax revenue is allocated to the enterprise fund for transfer 34.5 % to the general fund and 65.5% to the Department of Public Health and Human Services (DPHHS) for alcohol treatment and rehabilitation programs.

Legislative Fiscal Division

Revenue Estimate Profile

Liquor Excise and License Tax

Distribution Chart:

Collection Frequency: Both the liquor excise tax and the license tax on liquor are collected at the time of the sale and delivery of liquor. Deposits to the general fund are made monthly.

% of Total General Fund Revenue:

FY 2004 – 0.78%	FY 2007 – 0.76%	FY 2010 – 0.96%
FY 2005 – 0.75%	FY 2008 – 0.76%	FY 2011 – 0.90%
FY 2006 – 0.74%	FY 2009 – 0.70%	FY 2012 – 0.91%

Revenue Estimate Methodology:

Data

The liquor excise and the liquor license tax estimates are based on data obtained from DOR, IHS, and the state accounting system (SABHRS). The DOR data provides the details of monthly liquor sales and costs, IHS projects the change in the consumer price index (CPI), and historic tax revenue data from SABHRS confirms the adequacy of the estimates.

Total liquor taxes are made up of two taxes, an excise tax and a license tax. While each tax has a different rate, both taxes are assessed on the retail sales price of the commodity. The tax rate is lower for companies that produce less than 200,000 gallons; however, for the purpose of estimating future liquor taxes, these lower tax rates are not considered. The rate of the excise tax is estimated at 16% of the price and the license tax is estimated at 10% of the price.

Analysis

Analysis shows a constant upward trend in liquor sales in Montana, as demonstrated in the figure below. Accordingly, unit sales is regressed in a linear trend model to determine the future unit sales.

Legislative Fiscal Division

Revenue Estimate Profile

Liquor Excise and License Tax

The liquor taxes estimate is calculated by applying growth rates to base year values of both the number of liquor units sold and the per unit price of liquor. The sales of liquor units are estimated by applying a three-year average growth factor. The annual growth factor for the forecast period is 4.9%. The growth rate for the price per liquor unit is estimated using the past year price as the base. This price is adjusted in subsequent years by the change in the CPI, adjusted by the long term ratio of the change in the cost of liquor units to the change in the CPI. Total units and sales per unit are multiplied to produce total estimated gross liquor sales. The final step is to apply both tax rates to the estimate of liquor sales to determine the estimate for the combined liquor excise and license taxes.

Adjustment and Distribution

Liquor taxes are distributed to the general fund after a reduction for tribal reimbursements. Three of the seven tribal governments—Blackfeet, Fort Belknap, and Fort Peck—receive liquor tax dollars. These tribal governments adhere to the Montana liquor tax laws. The state of Montana collects the tribes’ portion of the liquor taxes and quarterly distributes those collections based on a formula (per capita liquor consumption times tribal membership times the Montana tax rate). After reducing the excise tax revenue by the tribal distribution, the revenue is distributed to the enterprise fund and then to the general fund. The license tax is distributed to the enterprise fund and then to the general fund and DPHHS.

Liquor Profits

Revenue Description: The Department of Revenue (DOR) is authorized to sell liquor and fortified wine to retail liquor establishments throughout the state. These sales result in profits that are deposited in the general fund. Tax revenues generated from liquor excise and license taxes, as well as wine taxes, are estimated separately.

Liquor profits received by the state are primarily generated by a mark-up on the sale of liquor and fortified wine, less costs such as commissions and discounts. House Bill 348 enacted by the 2001 Legislature phased-in liquor store commission increases based on sales volume over a three-year period beginning FY 2003. A 40% mark-up is added to the state's base cost for liquor. The state's mark-up percentage on the base cost of fortified wine (more than 16% but no greater than 24% alcohol by volume) is 51%. The mark-up percentage for both liquor and wine is determined by administrative rule (see ARM 42.11.104).

Statutory Reference:

Tax Rate – Authority to markup the price is found in 16-1-404(2) and ARM 42.11.104
Tax Distribution (MCA) – 16-2-108(4)
Date Due – NA

Applicable Tax Rate(s): N/A

Distribution: Liquor profits are deposited in the general fund annually.

Distribution Chart:

Collection Frequency: Payment for liquor purchases is due within 60 days of the invoice date and revenue is deposited into an enterprise fund.

% of Total General Fund Revenue:

FY 2004 – 0.47%	FY 2007 – 0.45%	FY 2010 – 0.55%
FY 2005 – 0.43%	FY 2008 – 0.45%	FY 2011 – 0.50%
FY 2006 – 0.44%	FY 2009 – 0.40%	FY 2012 – 0.51%

Revenue Estimate Methodology:

Data

The liquor profits estimate is based on data obtained from DOR, the state budget system (MBARS), and the state accounting system (SABHRS). DOR provides monthly historical data for the total liquor sales, the number of units of liquor sold, and the average price for each unit of liquor. MBARS provides the present law operational budget for the DOR liquor division. SABHRS data provides a historic breakout of liquor expenses and is used as a comparison to check the adequacy of the estimate.

Analysis

As seen in the figure below, the profits are a small part of the total liquor sales. Since FY 2000, profits have averaged about 9.2% of total tax included liquor sales. In the forecast period, profits are expected to be approximately 8.7% of total tax included sales.

Legislative Fiscal Division

Revenue Estimate Profile

Liquor Profits

The starting point in estimating liquor profits is the gross sales of liquor. The steps in determining the liquor profits are as follows:

- Determine units
- Determine total sales value (units × price per unit)
- Determine costs of goods sold (units × cost per unit)
- Calculate discounts and commissions
- Obtain operating budgets
- Calculate taxes

Liquor profits are estimated by reducing total tax included liquor sales (for the methodology of total liquor sales, see the “Liquor Excise and License Tax” revenue section) by all the costs of doing business. For the purpose of estimating liquor profits, the cost of doing business includes the cost of the goods sold (cost of liquor and transportation), the taxes (excise and license), discounts and commissions, and net operating costs (program administration). These costs historically represent 91.1% of the cost of a unit of liquor. When costs are subtracted from total sales, the resulting amount is the estimate for liquor profits.

Revenue Estimate Profile

Lottery Profits

Revenue Description: The Montana state lottery was enacted by legislative referendum and became effective January 1, 1987. The first lottery game began in June 1987. A lottery is generally defined as “any procedure in which one or more prizes are distributed among persons who have paid for a chance to win a prize.” The games are administered by the Department of Administration. By law, a minimum of 45.0% of the money paid for tickets or chances must be paid out as prizes.

Lottery revenue is derived from ticket sales, sales agents license fees, and unclaimed prizes. Sales revenue is initially deposited into an enterprise fund known as the state lottery fund. After paying prizes, ticket costs, commissions, and other operating costs, profits are transferred to the general fund.

Statutory Reference:

Tax Rate – NA
Distribution (MCA) – 23-7-402(3)
Date Due – quarterly (23-7-402(3))

Applicable Tax Rate(s): There is no actual tax rate involved. However, applicants for sales agent licenses are charged a \$50 fee to cover the cost of investigating and processing the applications.

Distribution: All gross lottery revenue not used for prizes, commissions, administration, and operating expenses, together with the interest earned (on the gross revenue while the gross revenue is in the enterprise fund), is considered net revenue. This net revenue is transferred to the general fund. Senate Bill 55, passed by the 1999 Legislature, requires the Department of Commerce to submit a biennium budget for the state lottery fund for appropriation by the legislature. By determining the amount appropriated, the legislature has better control over the amount transferred to the general fund.

Distribution Chart:

Collection Frequency: Lottery revenues are collected on an on-going basis. Transfers to the general fund are usually made quarterly.

% of Total General Fund Revenue:

FY 2004 – 0.59%	FY 2007 – 0.62%	FY 2010 – 0.65%
FY 2005 – 0.41%	FY 2008 – 0.56%	FY 2011 – 0.60%
FY 2006 – 0.53%	FY 2009 – 0.56%	FY 2012 – 0.70%

Revenue Estimate Methodology:

The estimate for lottery profits is derived by estimating the various sources of revenue to the enterprise fund and expenses of the fund. Revenues less expenses are considered net revenue (profits).

Legislative Fiscal Division

Revenue Estimate Profile

Lottery Profits

Data

Data from the state accounting system (SABHRS) provide a history of the enterprise fund revenues and expenditures. Annual reports received from the Montana Lottery Commission provide additional financial information about the fund. Lottery personnel are contacted for their views on trends in lottery tickets sale and other factors that may influence revenues or expenditures. The state budgeting system is used to obtain estimates of appropriated administrative expenses. Montana population statistics from IHS are used to model per capita ticket sales.

Analysis

The estimate for lottery profits is difference between the four revenue components and the two expenditure components, each of which are forecast separately.

Revenue

1. Ticket sales – This is the largest component of lottery revenue. Per capita ticket sales are modeled on a time trend with an adjustment for unusually low sales in FY 2005, and multiplied by the forecast of Montana’s population to produce future ticket sales.

2. Licenses – Applicants who apply for a sales agent license pay a \$50 license fee. The amount from the last known fiscal year is used for all subsequent years.
3. Interest earnings – Money in the lottery enterprise fund, as well as Montana’s share of money held by the Multi-State Lottery Association, earns interest at the short-term interest rate and is deposited to the enterprise fund. To estimate interest earnings, the average daily balance is multiplied by the short-term interest rate. The average daily balance is determined by:
 - a. Deriving the balance for the last known fiscal year by dividing known interest earnings by the known short-term interest rate
 - b. Developing a balance ratio between the balance derived from (a) and ticket sales from the last known fiscal year
 - c. Multiplying the balance ratio by the ticket sales estimate for each subsequent year to derive the average daily balance.

Once the balance has been estimated, it is multiplied by the applicable short-term interest rate (see the “Treasury Cash Account” revenue source for details on the development of this rate).

Legislative Fiscal Division

Revenue Estimate Profile

Lottery Profits

4. Other – The small amount of miscellaneous revenue from the last known fiscal year is used for all subsequent years.

Expenditures

1. Prizes and Commissions – The ratio of prizes and commissions to ticket sales is relatively constant, so an average ratio is computed for all years with actual data. This ratio is multiplied by the estimated amount of ticket sales (see above) for each corresponding fiscal year to derive the estimate of prizes and commissions.

2. Operations – Operational costs are estimated using the budget submissions by the Lottery Commission, as shown on the state budgeting system.

Tobacco Tax

Revenue Description: The tobacco tax is an excise tax on tobacco products sold in Montana. Cigarettes are not subject to the tobacco tax. The tax is considered a direct tax on retail consumers, but is collected by the wholesaler. Tobacco products shipped from Montana and destined for retail sale and consumption outside the state are not subject to the tax.

Beginning May 1, 2003, the Fifty-eighth Legislature passed SB 407 that doubled the tax on all tobacco products other than cigarettes and moist snuff from 12.5% to 25.0% of the wholesale price. Furthermore, moist snuff is now taxed individually, increasing the rate from the equivalent of \$0.28 an ounce to \$0.35 an ounce. Beginning January 1, 2005, the electorate approved I-149 that raised the tax on other tobacco products to 50% of the wholesale price and moist snuff to \$0.85 per ounce. Wholesalers are allowed a discount of 1.5%, to cover collection and administrative expenses. The wholesaler is entitled to a refund for tobacco products that remain unsold. I-149 adjusted distributions to allow half of the tax revenues to flow into the state general fund and half to flow into a new state special revenue fund for health and Medicaid initiatives.

The state has tobacco revenue sharing agreements with five tribes in Montana. In the agreements with the Blackfeet, Fort Belknap, Fort Peck, Chippewa Cree, and Crow tribes, the state collects the tax imposed by the tribes and distributes the revenue to the tribes on a quarterly basis. Indian consumers of tobacco on other reservations are exempt from paying the tobacco tax.

Statutory Reference:

- Tax Rate (MCA) – 16-11-111(7)
- Tax Distribution (MCA) – 16-11-114(2), 16-11-119(3)
- Date Due (MCA) – 16-11-111(8)

Applicable Tax Rate(s):

- Tobacco products - 50.0% of the wholesale price
- Moist snuff - \$0.85 per ounce

Distribution:

After amounts allocated for expenses and tribal distributions, the tax is distributed as follows:

- 50% to a state special revenue fund to be used of health and Medicaid initiatives
- 50% to the general fund

Distribution Chart:

Collection Frequency: Monthly

Legislative Fiscal Division

Revenue Estimate Profile

Tobacco Tax

% of Total General Fund Revenue:

FY 2004 – 0.26%	FY 2007 – 0.25%	FY 2010 – 0.33%
FY 2005 – 0.26%	FY 2008 – 0.24%	FY 2011 – 0.31%
FY 2006 – 0.26%	FY 2009 – 0.28%	FY 2012 – 0.31%

Revenue Estimate Methodology:

Data

Data obtained from the state accounting system (SABHRS), the Department of Revenue (DOR), and IHS is used to forecast tobacco tax revenues. The tobacco tax is made up of two taxes on the consumption of tobacco products. The tax on moist snuff (the largest component of the tax) is assessed on the number of ounces sold, and the tax on all other tobacco products (not including cigarettes) is assessed on the wholesale value of the product. DOR provides information, by distributor and month, on the number of ounces of snuff and the value of the tobacco products sold in each month and the records of tribal distributions, and the amount of discounts and credits given to tobacco distributors. Historic tax collections are available through SABHRS, and IHS supplies projections of the consumer price index (CPI) and Montana population.

To prepare the data for analysis, the monthly data is summed across all distributor purchases and over the fiscal years. For the estimate of moist snuff tax, the data is divided by the estimate of the Montana population of ages 21 or greater. The per-capita consumption estimate is used to determine the total taxes paid on moist snuff. The actual SABHRS data serves as a comparative check against the collection data provided by the DOR.

Analysis

In FY 2004, the tobacco tax assessment distinguished between moist snuff and other tobacco products. A tax rate is imposed on the ounces of snuff sold instead of on value, as other tobacco products are taxed. The figure below shows the number of ounces of moist snuff sold to wholesalers since FY 2004 and the projected sales of ounces through the forecast period, as well as the wholesaler sales and projected sales of other tobacco products (value) over the same period.

In recent years, the consumption of moist snuff has increased at a slower rate than the “value” of other tobacco products. Consequently, the estimate for the tobacco taxes is derived using unique growth factors of the proxy of each moist snuff and other tobacco products.

Consumption of moist snuff is trended against population over age 21. The forecast for the value of other tobacco products sold in Montana is obtained by applying the most recent actual growth to the base year of FY 2012 and forward. Individual tax rates are applied to the consumption/value forecasts to create a gross tax estimate.

Legislative Fiscal Division

Revenue Estimate Profile

Tobacco Tax

Adjustment and Distribution

The estimates for gross collections of the tobacco taxes are adjusted for discounts and credits provided to the distributors. Finally, calculations are made for the distribution of the tobacco tax. Tobacco taxes are distributed 50% to a state special revenue fund to be used of health and Medicaid initiatives and 50% to the general fund. The general fund distribution is then reduced by tribal reimbursements. At this time, five of the seven tribal governments receive tobacco tax dollars: Blackfeet, Fort Belknap, Fort Peck, Chippewa Cree, and Crow. These tribal governments adhere to Montana tobacco tax laws. The state of Montana collects the tribes' portion of the tax and quarterly distributes the collections based on a formula (per capita tobacco products consumption times 150% times tribal membership times the Montana tax rate).

Video Gambling Tax

Revenue Description: Video gambling income is derived from two sources: license fees and video gambling taxes. There are three types of license fees that generate revenue. Numerous fees are paid by operators for both video gambling machines and for non-video games such as poker. In addition, persons pay an annual fee for the right to assemble, produce, or manufacture video gambling machines or associated equipment. The video gambling tax is paid by licensed video gambling machine operators. License holders are charged a tax of 15.0% of the gross income (defined as net of payouts) from each licensed video gambling machine. The Department of Justice (DOJ) issues video gambling licenses and permits and collects the fees and taxes. All video gambling tax revenue is deposited into the general fund.

Statutory Reference:

Tax Rate (MCA) – route operator license (23-5-129), gambling establishment operator license (23-5-177), card table fee (23-5-306(2)), bingo/keno permit (23-5-407), sports tab tax (23-5-502), video tax (23-5-610(1)), machine permit fee (23-5-612(2))

Tax Distribution (MCA) – card table fee (23-5-306(3&4)), bingo and keno tax (23-5-409), sports tab tax (23-5-502), video (23-5-610(6)), machine permit fee (23-5-612(3))

Date Due – card table fees due annually and distributed quarterly to local governments (23-5-306(1&4)), video tax due 15 and 25 days after the end of the quarter (23-5-610(5)(a&b)), machine permit fees due annually prorated on a quarterly basis (23-5-612(2a)), bingo and keno taxes due July 31.

Applicable Tax Rate(s):

License Fees

- Video Gambling Machine Permit - \$220 annually (prorated basis), \$25 machine transfer processing fee
- Video Gambling Manufacturer License - \$1,000 annually. An additional application fee is charged manufacturers to cover processing costs of the initial application. The manufacture license may be waived by the DOJ if the manufacture is also a licensed distributor or route operator.
- Video Gambling Machine Examination Fee – An amount equal to actual DOJ costs of examining the electronic equipment
- Distributor License - \$1,000 annually. The distributor license may be waived by the DOJ if the distributor is also a licensed operator or manufacturer. An additional application fee is charged distributors to cover processing costs of the initial application.
- Route Operator License - \$1,000 annually. The operator license may be waived by the DOJ if the operator is also a licensed distributor or manufacturer. An additional application fee is charged operators to cover processing costs of the initial application.
- Bingo/Keno Manufacture License - \$1,000 annually. An additional application fee is charged manufacturers to cover processing costs of the initial application.
- Gambling Establishment Operator License – An amount equal to the actual DOJ costs of determining licensure qualifications
- Antique Slot Machine Seller Permit - \$50 annually
- Live Card Game Table - \$250 annually for the first table and \$500 for each additional table
- Card Game Dealer License - \$75 for the first year, \$25 for each subsequent year
- Pinochle Tournament Permit - \$25
- Card Room Contractor License - \$150 annually
- Bingo/Keno Permit - \$250 annually
- Bingo/Keno Examination Fee – An amount equal to actual DOJ costs of examining the electronic equipment
- Sports Tab Game Seller License - \$100 annually. An additional application fee is charged to cover processing costs of the initial application.
- Casino Night Permit - \$25
- Associated Business - \$100

Distribution:

License Fees

1. \$100 of the live card game table fee and \$100 of the video gambling machine permit fee (prorated basis) are statutorily appropriated for distribution to local governments.
2. All other license fee revenue is retained by DOJ to cover administrative costs.

Gambling Taxes

1. Video – All of video gambling tax receipts are deposited into the general fund.
2. Bingo/Keno – All collections are statutorily appropriated for distribution to the municipality or county in which the game is located.
3. Sport Tabs – All collections are retained by DOJ for administration purposes.

Distribution Chart:

Collection Frequency: Video tax – quarterly, machine permit fees – quarterly, other fees – annually

% of Total General Fund Revenue:

FY 2004 – 3.69%	FY 2007 – 3.30%	FY 2010 – 3.22%
FY 2005 – 3.49%	FY 2008 – 3.22%	FY 2011 – 2.80%
FY 2006 – 3.35%	FY 2009 – 3.45%	FY 2012 – 2.88%

Revenue Estimate Methodology:

The components of video gambling revenue have separate distributions, so each component is estimated separately.

Data

The Department of Justice provides data upon request. Limited applicable data is available from the department’s website. Historic and current revenue collections are obtained from SABHRS. IHS forecasts of Montana population and personal income are used to model per capita video gambling machine gross income.

Legislative Fiscal Division

Revenue Estimate Profile

Video Gambling Tax

Analysis

The revenue estimate is determined in a three-step process:

1. Revenue from the tax on video gambling machine gross income (defined as net of payouts) is the largest component of this revenue source and all revenue from this tax is distributed to the general fund. To determine total gross income, gross income for poker, keno, and multiple-game machines are calculated from revenue collections. The amount from the most recently completed fiscal year and the estimates for each succeeding fiscal year are multiplied by a growth factor based on Montana personal income. The growth factor represents the rate of increase of per capita gross revenue. Once total gross income is estimated, the revenue estimate for this component is determined by multiplying total gross income by the tax rate. The total gross income and growth rates are shown in the chart below.

2. Permit and license fees are the second component to this revenue source, the revenue from which is deposited to the state special revenue fund and distributed to the Department of Justice to pay administrative costs and to local governments. There are three separate estimates for permit and license fees:
 - a. Video gambling manufacturing license – The number of licenses from the last known fiscal year is multiplied by the \$1,000 license fee and the product used as the estimate for all subsequent fiscal years.

Legislative Fiscal Division

Revenue Estimate Profile

Video Gambling Tax

- b. Live game permit/license fees – The amounts of “first” poker tables, “additional” poker tables, bingo/keno, and card dealers are estimated by the average of the prior two actual/estimated amounts beginning with fiscal years 2011 and 2012. The numbers are multiplied by the applicable fees of \$250, \$500, \$250, and \$75 respectively, and the product used for all subsequent fiscal years for each type.

- c. Video gambling machine permit fees – The number of video, bingo/multi game, and keno machine permits for the last known fiscal year is summed. The sum is multiplied by the ratio of the amount of revenue deposited to DOJ gambling license account to the total amount of permit fee revenue for the last known fiscal year. This is done to adjust for discrepancies in the last known fiscal year between actual collections and totals derived by multiplying number of permits by the applicable permit/license fee. Once the total adjusted number of permits has been estimated, it is multiplied by the \$220 fee.

Adjustments and Distribution

Since the general fund and the state special revenue component are estimated under separate methodologies, the distribution of the revenue has already been done.

Revenue Estimate Profile

Wine Tax

Revenue Description: A wine tax is levied on table wines imported into Montana by wine distributors or by the Department of Revenue (DOR), who is authorized to sell wines to retail liquor establishments throughout the state. A tax is also imposed on hard cider imported by a table wine distributor or DOR. A portion of wine tax revenue is returned to Native American tribes per an agreement between DOR and the tribes.

Statutory Reference:

- Tax Rate (MCA) – 16-1-411(1), 16-2-301(2)
- Tax Distribution (MCA) – 16-1-411(3), 16-2-301(2)
- Date Due – 15th day of the month following the sale from the distributor’s warehouse (16-1-411(2))

Applicable Tax Rate(s): A tax of \$0.27 is imposed per liter of wine and a tax of \$0.037 per liter is imposed on hard cider. An additional tax of \$0.01 per liter is imposed on table wine sold by a table wine distributor to an agent.

Distribution: The \$0.01 per liter tax is deposited into the general fund. After expenses and tribal allocations, other wine tax revenue is distributed 69.0% to the general fund and 31.0% to the Department of Public Health and Human Services (DPHHS) alcohol account. The general fund distribution is reduced by the amount of the tribal agreements.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue:

FY 2004 – 0.10%	FY 2007 – 0.10%	FY 2010 – 0.12%
FY 2005 – 0.10%	FY 2008 – 0.09%	FY 2011 – 0.11%
FY 2006 – 0.10%	FY 2009 – 0.11%	FY 2012 – 0.11%

Revenue Estimate Methodology:

Data

The state accounting system (SABHRS) and DOR provide data for the wine tax estimates. The SABHRS data includes total fiscal year tax collection data. The DOR data provides the information related to historic tribal distributions. IHS projections of population over age 21 are used for future per capita consumption.

Legislative Fiscal Division

Revenue Estimate Profile

Wine Tax

Wine tax collections are made up of the collections of two taxes, the wine tax and the hard cider tax. Although each tax is individually established in statute, no distinction between the taxes is made when preparing the estimates. In the past several years, the cider tax has contributed no more than 0.1% of the total wine tax collections. If cider tax collections become more significant, the wine tax methodology will be adapted to forecast hard cider tax separately.

Wine projections are based on the number of liters of wine consumed. SABHRS data is used to produce a proxy number of liters by dividing the total tax receipts by the wine tax rate.

Analysis

Growth in wine tax collections, measured in liters of wine, has followed a consistent upward trend through time. The trend is apparent in the figure below.

Proxy liters of wine is modeled against Montana population over age 21 to produce an estimate of future proxy liters. The tax rate is applied to produce future tax revenues.

Adjustment and Distribution

The wine taxes are distributed between two funds; the general fund receives 69% and the DPHHS alcohol state special revenue account receives 31%. The general fund distribution is reduced by tribal reimbursements. At this time, three of the seven tribal governments—Blackfeet, Fort Belknap, and Fort Peck—receive wine tax dollars. These tribal governments adhere to Montana wine tax laws. The state of Montana collects the tribes' portion of the tax, and quarterly distributes the collections based on a formula (per capita wine consumption times tribal membership times the Montana tax rate).

Legislative Fiscal Division

Revenue Estimate Profile

Property Tax

Revenue Description: Montana law requires counties to levy a county equalization levy of 55 mills, a state equalization levy of 40 mills, and 6 mills for the university system against all taxable value in each county. A mill levy of 1.5 mills is also applied against all property in the five counties with a vo-tech college. Taxable value is defined as the market value of statutorily defined property times a statutory tax rate. Property valued at market value includes personal property, utility property, railroad and airline property, and mineral net and gross proceeds. The assessed value of residential and commercial real estate is the market value phased in over the reappraisal cycle. Agricultural land and timberland are valued on a productivity basis and their values are also phased in over the reappraisal cycle. The last reappraisal cycle took effect January 1, 2009.

Beginning January 1, 2009, residential and commercial property as well as agricultural land and timberland reflect the impact of the new reappraisal on assessed values. The current reappraisal cycle is 6 years, during which increases in property values are phased in by 1/6th per year. Property that declines in value was assessed immediately at its new reappraised value. The impact of the 2009 reappraisal on assessed values increased the market value of the average residence by 55.1%. The equivalent increases for commercial property were 34.5%, for agricultural land by 26.8%, and for timberland by 51.7%.

The 2009 legislature passed a reappraisal mitigation bill – HB 658. Beginning in tax year 2009, reappraisal values are phased in over the next six years. The new tax rates and the new homestead and comstead exemptions are shown in the accompanying table. In addition to mitigation through lower tax rates and higher exemptions, HB 658 also created an upper limit of \$1.5 million in market value of residences for which the homestead exemption is available, increased the irrigation costs in valuing irrigated agricultural land, and increased the capitalization rate used to value timberland. MCA 15-10-420 limits the growth from year to year in property tax to one half the rate of inflation. Before HB 658, the calculation allowed each state mill to be rounded up to the nearest whole mill. HB 658 changed MCA 15-10-420 so that each state mill is to be rounded up to the nearest tenth of a mill. If the growth in taxable value exclusive of new property exceeds one-half the rate of inflation, then each state mill levy must be reduced to the point where expected revenue exceeds no more than half the rate of inflation. Newly taxable property was also redefined as current year value less prior year value.

In addition to the tax on property, this revenue component includes collections from "non-levy" sources are distributed on the basis of mills levied by taxing jurisdictions. These non-levy sources include the state of coal gross proceeds taxes, federal forest revenues, and smaller revenue sources.

This source also includes the state's share of protested paid by centrally assessed companies. Fifty percent of paid under protest by centrally assessed firms are deposited in the general fund and the rest are deposited state special account. Should the state fail in its defense the taxation of these companies, the protested taxes must be returned to the taxpayer. If the state prevails in the case, the money in the state special account is transferred to the general fund.

Tax Rates and Exemptions Class 3 and Class 4				
	Tax Rate	Homestead	Comstead	Tax Rate
Tax Year	Class 3 & 4	Exemption	Exemption	Timber Land
2010	2.8%	39.5%	15.9%	0.3%
2011	2.7%	41.8%	17.5%	0.3%

The state has established programs that lower property taxes for homeowners whose homesteads have increased above certain thresholds due to reappraisal and whose income falls below certain levels. These programs are known as taxpayer assistance programs.

Legislative Fiscal Division

Revenue Estimate Profile

Property Tax

Revenue Estimate Methodology:

Data

The property tax received by the state is composed of two kinds of revenue. First there is property tax proper, i.e. each property has a taxable value which is multiplied by a mill levy (a tax rate per thousand dollars of taxable value) set by the government, in this case the state. The second kind of revenue is non-levy revenue that is distributed proportionally to each mill levy and is included as property tax revenue.

The state imposes five types of mill levies. These are the 33-mill elementary county equalization levy, the 22-mill high school county equalization levy, the 40-mill state equalization levy, the 6-mill university levy, and the 1.5-mill vocational technical college (vo-tech) levy. The first three (most often called the 95 mills for education) are applied to all property in the state and are deposited in the general fund. The 6-mill levy is applied to all property in the state and is deposited in a special account for university operations. The 1.5-mill levy is also deposited in the general fund and is applied to all property in the counties in which the five vo-tech colleges are located—Butte-Silver Bow, Cascade, Yellowstone, Missoula, and Lewis and Clark.

The data required to produce forecasts of property tax received by the state are historical data on assessed and taxable value by class of property, the amount of property in tax increment financing (TIF) districts, the amount of local abatements conferred by local governments, and future growth rates for these variables. Also required is historical and future data on the non-levy components of property tax. These are gross proceeds revenue, federal forest revenue, and miscellaneous revenue allocated to the various state mill levies. The latest taxable value data is for tax year 2012 and the latest data for the non-levy revenue is FY 2012.

The historical data on assessed and taxable value by property tax class, TIF taxable value, and abated taxable value are provided to the LFD and OBPP by the Department of Revenue on an annual basis, usually in October. TIF taxable value is required because state law allows a TIF district to apply the state 95 mills and 1.5 vo-tech mills to the increment in property value that occurred since the TIF was created, but allows the TIF district to keep the revenue associated with these mill levies. Thus the taxable value of the state must be adjusted downward by the value of TIF property for the 95 mills and the 1.5-mill levy. The 6-mill levy revenue derived from incremental TIF property does flow to the state special account for university operations, and thus the tax base for the 6-mill levy is not adjusted for the incremental taxable value in a TIF.

Montana law allows local governments (usually counties) to temporarily reduce the tax rate applied to the assessed value of property. This is called abated property. For instance, in tax year 2010, an electrical generation plant outside Hardin and another in Silver Bow County were granted a 10 year exemption on all personal and real estate property. The abatement applies to all local mills for those jurisdictions in which the properties are located. However, the tax rate reduction and the resulting partial exemption from property taxes does not apply to state mills. The taxable value data received by the department does not include the exempted property and thus for state property tax revenue purposes this property must be added back to the statewide taxable value. For the first time in tax year 2010, abated taxable values were available by class of property and were added back to each class of taxable value to form the tax base for the state mills. Previously these values had been added back without respect to class of property.

Assessed and taxable values are measured on January 1 of the tax year. The taxes are due to the state in the following November and May, i.e. in the fiscal year following the calendar year in which the values are measured. Coal gross proceeds are due to the state in the fiscal year two years after the calendar year in which the coal was produced. Federal forest receipts are received by the federal government in December of each year, and miscellaneous non-levy revenue (primarily interest) is deposited as earned.

Analysis

The latest year for which taxable value by class is available is the base from which future taxable values are derived. Growth rates are applied to the taxable value in each class of property. The table below shows growth rates for each class of property, for TIF and the resulting growth rates in net taxable value.

FY 2013 taxable values are tax year 2012 taxable values. The property was valued on January 1, 2012, and the revenue from these values is collected by the state in November and May of the following fiscal year. FY 2013 values are known, although preliminary.

For the most part, growth rates are based on historical growth since FY 2001 and on expected changes in tax rates in FY 2014 and 2015.

The growth rate for class 4 – residential and commercial real estate – is an estimate of the amount of new property expected to be added. The growth in new class 4 residential property is assumed to be 1.7% in FY 2013 and around 2.1% thereafter. The growth in commercial property is assumed to be around 2.7 percent, both the average since 2009. It is further assumed that as existing residential and commercial property values are phased in over the reappraisal cycle, the combination of declining tax rates and rising homestead and comstead exemptions will completely offset the growth in phased in value of existing property in each year of the forecast period. The only growth in class 4 taxable is assumed to be derived from new property.

Agricultural property is expected to decline in taxable value through FY 2013. The department phased in agricultural assessed values over the 6 year phase in cycle. Department rules required that changes in value between the 2002 reappraisal and the 2008 reappraisal phase in changes in value due to changes in productivity. The department failed to phase these values in but instead assigned the 2008 values immediately in tax year 2009. The department has devised a method to correct this by adjusting the phase in starting in tax year 2010 for the next 5 years. As a result taxable growth will be negative for agricultural land over the forecast period.

Timberland values are also expected to decrease slightly over the forecast period as some timberland is lost to development.

There are several projects in the planning stages or on hold – natural gas electrical generation plants (either in class 5 or class 9), industrial grade transmission lines (class 13), oil pipelines, specifically the Keystone pipeline (class 13) – that may add to the tax base in the forecast period. None of these have been explicitly added into the growth forecasts. Only known wind power projects have been incorporated in the estimate. The Montana Alberta Tie Line, if it gets built, will be split 50 percent between class 9 (electrical transmission) and class 14 (wind generation and transmission).

The market value of business equipment is expected to grow at 5.4% per year in the 2015 biennium. However, SB 372

Nonlevy - Miscellaneous Revenue	1.000	1.000	1.000
Protested Taxes in Protest account	<u>(2.282)</u>	<u>(2.282)</u>	<u>(2.282)</u>
Net Property Taxes - 95 Mills and 1.5 Mills	<u>\$241.741</u>	<u>\$246.620</u>	<u>\$254.651</u>
6-Mill Property Tax Revenue - University Account	\$14.940	\$15.484	\$15.939
Nonlevy Revenue Associated with 6-Mills	0.875	1.051	1.050
Protested Taxes in Protest account	<u>(0.143)</u>	<u>(0.143)</u>	<u>(0.143)</u>
Net Property Taxes in University Account	<u>\$15.672</u>	<u>\$16.392</u>	<u>\$16.846</u>

Once net taxable values are determined, the mill levies are applied. To this are added forecasts of non-levy revenue. Non-levy revenues come from coal gross proceeds, federal forest receipts and miscellaneous revenue (such as interest on investments, penalty and interest on delinquent taxes). The tax on the gross proceeds for coal is 5% of gross value and is estimated in conjunction with the coal severance tax. In the 2011 legislative session, HB 266 lowered the tax rate on underground mines to 2.5% for ten years beginning in calendar year 2011. Of the total gross proceeds revenue, a state share is distributed to the elementary and high school county equalization levies as they existed in FY 1990. In FY 1990, the elementary and high school county equalization levy was a combined 45 mills. For some of mines, 45 mills was as much as 49 percent of the consolidated mills of all jurisdictions, and for some other mines the 45 mills was as little as 20 percent of the consolidated mills for all jurisdictions.

Federal forest receipts are receipts from the federal government in lieu of revenues from the sale of forest products on federal land. By state law, two-thirds of this revenue is distributed to the county road fund in the counties with federal forestland and the remaining one-third is distributed to the county equalization mills and the county retirement and transportation mills. The share distributed to the 55 mills is the proportion that 55 mills is to all countywide mills in the prior year. This is assumed constant at 62.5% over the forecast period. The proportion that the 55 mills is to all countywide mills is multiplied times 1/3 of the federal forest receipts. The previous formula for distributing federal forest payments to counties was sunset in FY 2008. In the Emergency Economic Stabilization Act of 2008, a new formula for the distribution of forest receipts was enacted. The new formula for FY 2009 through 2013 considers acres of federal land within an eligible county, the average 3 highest 25% payments made to each eligible State for each eligible county, and an income adjustment based on the per capita personal income for each county. As before, not more than 20% but at least 15% must be used by county governments for projects on federal lands. The amount of federal forest receipts in total is expected to be around 2.5 times greater than the amount available previously. Thus the amount distributed to the 55 mills will also increase substantially. Beginning in FY 2014, because the federal law will sunset, it is assumed that the old method of distributing these monies will prevail – 25% of the value of timber sold averaged over the prior 3 years. As a result, the state share of federal forest receipts distributed to the 55 mills is expected to decline by around \$0.47 million per year in FY 2014 compared with around \$3.8 million in FY 2013.

Miscellaneous receipts distributed to the 95 mills include investment earnings, tax title sales, and penalties and interest on delinquent taxes. In FY 2011 miscellaneous non-levy revenue was \$1.0 million, which is expected to remain constant in the future.

Once property tax revenue adjusted for non-levy revenue is determined, an adjustment is made for centrally assessed protested taxes. In FY 2012, certain electrical generation, transmission companies, pipeline companies and telecommunication companies protested a portion of their property taxes. Under state law, half of the protested taxes from these companies is deposited in a special account and half in the general fund. It is expected that \$2.3 million will be

Revenue Estimate Profile

Property Tax: 55 Mill

Non Levy Revenue includes federal forest receipts, coal gross proceeds revenue, and other revenue which is distributed to statewide and local mills in each county. Before July 1, 2001, vehicle fees in lieu of taxes, financial institution taxes, and reimbursements from the state were non-levy revenue. Before January 1, 2003, oil and natural gas receipts were treated as non-levy revenue. The mills to which non levy revenue is distributed are unique for each county and each non levy revenue source. The state's portion of non-levy revenue is remitted to the state as a portion of the appropriate property tax. For example, statewide 40 mill revenue includes a property tax portion and a non-levy portion. A description of each individual source follows below.

Federal Forest Receipts

Revenue Description: Federal forest receipts are payments from the federal government in lieu of revenues from the sale of forest products of federal land.

Applicable Tax Rate(s): N/A

Distribution: The county treasurer apportions federal forest receipts in the following manner. Not more than 20% and not less than 15% is distributed to county government for special projects on federal land. Of the remainder:

- 66 2/3% goes to the general fund of the county
- 33 1/3% goes to the following countywide accounts, based on the mill ratios of each to total mills in the prior year: county equalization accounts (55 mills), county transportation account, county retirement accounts

Collection Frequency: Twice annually (usually October and December).

Applicable Assumptions and/or Relevant Indicators:

Federal Forest Timber Prices, Federal Board Feet Harvested, Mill Levies for County Transportation and Retirement Accounts

Data Source(s): U.S. Forest Service survey, SABHRS

Contacts: U.S. Forest Service

Statutory References:

Tax Rate – NA

Distribution (MCA) – 17-3-211, 17-3-212

Date Due - the state treasurer distributes the funds within 30 days after receiving full payment% of Total General Fund Revenue: **Included in total property tax contribution.**

Revenue Estimate Methodology: The federal government authorizes logging operations on forest lands located within the borders of Montana. Through federal FY 2000, the sale of timber generated revenue that the federal government shared with the state in the following year. The state received 25% of the federal forest receipts and sent the money to the county treasurer of the county in which the receipts were generated. Within thirty days, the county treasurer distributes the money to various county and state accounts.

The previous formula for distributing federal forest payments sunset in FY 2008. In the Emergency Economic Stabilization Act of 2008 (I.e. the Bailout Bill), a new formula for the distribution of forest receipts was enacted. The new formula for FY 2009 through 2012 considers acres of Federal land within an eligible county, the average 3 highest 25% payments made to each eligible State for each eligible county, and an income adjustment based on the per capita personal income for each county. As before, not more than 20% but at least 15% must be used by county governments for projects on federal lands. Beginning in FY 2013, because the federal law will sunset, it is assumed that the old method of distributing these monies will prevail – 25% of the value of timber sold. As a result, the state share of federal forest receipts distributed to the 55 mills is expected to decline by around \$4 million per year.

Legislative Fiscal Division

Revenue Estimate Profile

Property Tax: 55 Mill

Coal Gross Proceeds Tax

Revenue Description: The state imposes a gross proceeds tax of 5% on the gross value of coal produced by all the coal mines in the state. The gross value of coal is computed as the tonnage of coal produced and sold times the contract sales price. This is the same gross value as used in the calculation of the state coal severance tax.

The tax is applied to one year's worth of production and the producer is billed in the following year. The producer pays the tax to the county treasurer in which the mine is located in two equal installments in the following fiscal year. One is in November of the notice year and the other is in May of the following year. Once received by the county treasurer, the tax revenue is distributed one month after receipt.

Applicable Tax Rate(s): The amount of tax due is 5% of the value of production as measured by the contract sales price for production in the preceding calendar year.

Distribution: The county treasurer distributes the coal gross proceeds tax based on the relative proportions of mill levies for the state, counties, and school districts as these existed in tax year 1989. At that time the county equalization mill levy was 45 mills. However, coal gross proceeds from new mines (starting business after December 31, 1988) are distributed across mill levies in the previous fiscal year. However, a new mine – Signal Peak in Musselshell County – which recently started production will be subject to the old distribution mechanism under HB 588, a bill passed by the 2009 legislature.

Collection Frequency: The coal gross proceeds tax is collected twice annually in November and May. The state receives the tax revenue in December and June.

Applicable Assumptions and/or Relevant Indicators:

Montana Coal Production, Montana Contract Sales Price, Statewide Average Mill Ratios

Data Source(s): Coal Company Surveys, Department of Revenue, County Treasurers

Contacts: Coal Company Representatives, Department of Revenue, County Treasurers

Statutory References:

Tax Rate (MCA) – 15-23-703(1)

Tax Distribution (MCA) – 15-23-703(3)

% of Total General Fund Revenue: Included in total property tax contribution.

Revenue Estimate Methodology: The major coal companies are surveyed for anticipated production levels and general indications of coal prices. In addition, a review is performed of historical trends and current literature on coal prices. The taxable value is then computed for each company by taking anticipated production, and multiplying that number by the contract sales price. Taxable value is then multiplied by the applicable tax rate to determine tax revenue. The final step involves applying the mill ratio for the state county equalization levy to the average statewide levy for FY 1990 for the counties in which mines are located.

Legislative Fiscal Division

Revenue Estimate Profile

Property Tax: 55 Mill

Other Revenue

Revenue Description:

The county equalization account receives other revenue in addition to the types listed elsewhere. These include penalties and interest, back taxes, investment earnings, recreational fees, tax title and property sales, various state grants and fees, district court fines, county rents and lease income, and various revenue from federal sources such as PILT, Taylor Grazing and Bankhead Jones payments.

Applicable Tax Rate(s): N/A

Distribution: Varies

Collection Frequency: Varies

Applicable Assumptions and/or Relevant Indicators: Because these sources are fairly stable in total, the last known year of collections is usually used to forecast future collections.

Data Source(s): County Collection Reports

Contacts: Office of Public Instruction

Statutory References: Various

% of Total General Fund Revenue: Included in total property tax contribution.

Revenue Estimate Methodology: Because these sources are fairly stable in total, the last known year of collections is usually used to forecast future collections. Data for the last known year are obtained from data provided to the Office of Public Instruction by the county treasurers.

Forecast and Distribution Methodology

Legislative Fiscal Division

Revenue Estimate Profile

Property Tax: 40 Mill

Statutory Reference:

Tax Rate (MCA) – 20-9-360

Tax Distribution (MCA) – 20-9-360

Date Due – one-half of taxes due November 30th and one-half due May 31st (15-16-102(1)), county treasurers must remit to the Department of Revenue within the first 20 days of each month money received in the previous month (15-1-504(1))

Applicable Tax Rate(s): Each property class has its own tax rate, which is applied to the assessed value to produce a taxable value. For every \$1,000 in taxable value, 40 mills generate \$40 in state property taxes.

Distribution: All property tax receipts are deposited into the general fund, except revenue associated with the 6-mill university levy.

Distribution Chart:

Collection Frequency: Monthly with significant state deposits in December and June.

Revenue Estimate Profile

Property Tax: 1.5 Mill

Revenue Description: Beginning in FY 1997, statute requires the boards of county commissioners in the five counties where colleges of technology reside to levy 1.5 mills for deposit in the state general fund. This revenue component used to include collections from non-levy sources that were distributed on the basis of mills levied by taxing jurisdictions. HB 124, passed during the 2001 legislative session, eliminated distribution of non-levy sources to the 1.5 mill levy.

Statutory Reference:

Tax Rate (MCA) – 20-25-439(1)

Tax Distribution (MCA) – 20-25-439(2)

Date Due – one-half of taxes due November 30th and one-half due May 31st (15-16-102(1)), county treasurers must remit to the Department of Revenue within the first 20 days of each month money received in the previous month (15-1-504(1))

Applicable Tax Rate(s): Each property class has its own tax rate which is applied to assessed value to produce a taxable value. For every \$1,000 in taxable value, 1.5 mills generate \$1.50 in state property taxes.

Distribution: All property tax receipts are deposited into the general fund, except revenue associated with the 6-mill university levy.

Legislative Fiscal Division

Revenue Estimate Profile

All Other Revenue

Revenue Description: There are a number of other taxes, fees, and fines that historically have generated less than \$2.5 million each in annual general fund revenue. In addition, the statutes governing these miscellaneous taxes, fees, and fines are frequently changed, making meaningful comparison between tax years impractical and accurate estimation of the revenue difficult.

“All Other Revenue” sources are estimated in aggregate except for the following: court automation surcharge (enacted by the 2005 Legislature in House Bill 536), investment license transfers, liquor license fee transfers, civil fines, lodging facility use tax, deposits by state agencies for SWCAP/ SFCAP, district court fees, BOI reimbursement of State Street Banking fees, transfers of excess coal tax revenue in the shared account (beginning FY 2013), bentonite tax enacted in SB 276 by the 2005 Legislature, excess balances in the captive insurance and the procurement accounts, and transfer of the excess over \$2.0 million from the veterans’ cigarette tax account administered by DPHHS. In the past, general fund wildfire costs incurred on federal jurisdiction fires and reimbursed by the federal government had been included in this revenue source, but beginning in FY 2003 they are deposited to the federal special revenue fund. Due to a settlement with Federal Express, a one-time amount of \$1.457 million was added to FY 2011.

Statutory Reference: Various

Applicable Tax Rate(s): Various

Distribution: “All Other Revenue” is deposited in the general fund.

Distribution Chart:

Collection Frequency: The various revenue sources are generally collected on a monthly basis.

% of Total General Fund Revenue:

FY 2004 – 2.19%	FY 2007 – 1.04%	FY 2010 – 2.17%
FY 2005 – 2.27%	FY 2008 – 1.96%	FY 2011 – 2.83%
FY 2006 – 1.87%	FY 2009 – 1.77%	FY 2012 – 2.53%

Revenue Estimate Methodology:

There are numerous smaller sources of revenue deposited to the general fund that are treated as a single source termed “All Other.” Fifteen of these revenue sources are estimated individually with the remainder estimated as a group.

Data

Numerous data sources are consulted for each of the applicable fifteen revenue sources that are estimated individually.

Analysis

1. Abandoned property is assumed to grow at 0% per year for the forecast period.
2. District court fees are assumed to grow at 0% per year for the forecast period.
3. Investment license fee transfer is the net between non-general fund investment fee revenue collected by the State Auditor and its expenses. These amounts are determined in the “Investment License Fee” revenue source.
4. Statewide Cost Allocation Plan: amounts budgeted for agencies in HB 2 for the SWCAP are used for the forecast amounts from this source.

Legislative Fiscal Division

Revenue Estimate Profile

All Other Revenue

5. Court surcharge is assumed to grow at 0% per year for the forecast period.
6. Veteran's cigarette account transfer: money in the account at the end of a fiscal year in excess of \$2.0 million is transferred to the general fund. To estimate the excess amounts, distributions of cigarette tax revenue to the account (as determined in the "Cigarette Tax" revenue source) is reduced by budgeted present law amounts from the account for each fiscal year obtained from MBARS. Included are expenditure estimates from long range building appropriations. The \$2.0 million limit is then subtracted from the net revenue.
7. Banking charges: the rate the Board of Investments charges funds for its services is determined by a contract with a financial institution. Board personnel state that the current contract is \$1,550,000, but may be more if additional accounts are established.
8. Civil fines are assumed to grow at 0% per year for the forecast period.
9. Liquor License Fee Transfer: money collected from liquor license fees, net of operating costs of the Department of Revenue and Department of Justice, is transferred to the general fund. License fee revenue and operating costs (obtained from MBARS budgets) are estimated and shown in the "Liquor Profits" revenue source.
10. Coal Shared Account (beginning FY 2013): any excess fund balance in the account is transferred to the general fund. To estimate the excess amount, distributions of coal severance tax revenue to the account (as determined in the "Coal Severance Tax" revenue source) and revenues estimated by the Governor's budget office are reduced by budgeted present law amounts for each fiscal year from the account obtained from MBARS.
11. Captive Insurance Account: any excess fund balance in the account is transferred to the general fund. To estimate the excess amounts, distributions of insurance tax revenue to the account (as determined in the "Insurance Tax" revenue source) and revenues estimated by the Governor's budget office are reduced by budgeted present law amounts for each fiscal year from the account obtained from MBARS.
12. Procurement Account transfers: any excess fund balance in the account is transferred to the general fund. To estimate the excess amounts, revenues estimated by the Governor's budget office are reduced by budgeted present law amounts for each fiscal year from the account obtained from MBARS.
13. Bentonite tax is assumed to grow at 0% per year for the forecast period.
14. State Employees Lodging Facility Use Tax: revenue from this tax paid by state employees is returned to the funds from which they were paid, including the general fund. The general fund estimate is calculated by multiplying the estimate for non-general fund (estimated in the "Lodging Taxes" revenue source) by the ratio of the previous lodging facility use tax general fund portion to the total non-general fund portion.
15. One-time transfers are assumed to be \$0 for the forecast period.
16. The remainder of "All Other" revenue, after the fifteen revenue sources have been estimated individually, is estimated by increasing the amount received in the last known fiscal year and each subsequent forecast year by 2%.

Adjustments and Distribution

Once total revenue for each fiscal year is determined, 100% of the revenue is distributed to the general fund.

Highway Patrol Fines

Revenue Description: The Montana Highway Patrol issues citations for speeding, driving under the influence of alcohol or drugs, and other misdemeanors. The fines and forfeitures associated with these citations are collected by various state and local courts.

Statutory Reference:

Tax Rate (MCA) – general fines (61-3-601, 61-5-307, 61-7-118, 61-8-711, 61-9-511), multiple others
Tax Distribution (MCA) – 3-10-601 (fines collected in justice court are included in “All Other General Fund”), 61-10-148 (violations of vehicle size, weight & load), 61-12-701 (fines by Highway Patrol)
Date Due – upon conviction

Applicable Tax Rate(s): Fines for citations are variable.

Distribution: All of Highway Patrol fines and forfeitures on all offenses that result from citations issued by the Highway Patrol, except those paid to a justices’ court, and received by the state are deposited in the general fund.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue:

FY 2004 – 0.30%	FY 2007 – 0.23%	FY 2010 – 0.29%
FY 2005 – 0.28%	FY 2008 – 0.21%	FY 2011 – 0.24%
FY 2006 – 0.25%	FY 2009 – 0.23%	FY 2012 – 0.23%

Revenue Estimate Methodology:

Highway patrol fine revenue forecast by applying an average annual growth rate to the last known fiscal year collections.

Data

Data from the statewide accounting system (SABHRS) provide a history of highway patrol fine revenue.

Analysis

The twenty-year average annual growth between is applied to the last known fiscal year. All subsequent years are assumed to grow at the same rate.

Nursing Facilities Fee

Revenue Description: This source consists of two similar utilization fees on nursing homes: a nursing facility utilization fee and an intermediate care facility utilization fee.

With the enactment of House Bill 749 by the 2005 Legislature, qualified nursing facilities are required to pay a nursing facility utilization fee of \$8.30 for each bed day in the facility. Nursing facilities are health care facilities licensed by the Department of Public Health and Human Services and include those operated for profit or non-profit, freestanding or part of another health facility, and publicly or privately owned. Specifically included by statute is the Montana Mental Health Nursing Care Center. According to federal definitions, nursing facilities do not include adult foster homes, retirement homes, and other alternative living arrangements. Bed days are defined as a 24-hour period in which a resident of a nursing facility is present in the facility or in which a bed is held for a resident while on temporary leave.

An intermediate care facility utilization fee is imposed on resident bed days of intermediate care facilities for the mentally disabled. The only qualifying facility is the Montana Developmental Center. With the enactment of Senate Bill 82 by the 2005 Legislature, the fee is 6% of a facility's quarterly revenue divided by the quarterly bed days.

Statutory Reference:

Tax Rate (MCA) – Nursing facility utilization fee (15-60-102), intermediate care facility utilization fee (15-67-102(2))

Tax Distribution (MCA) – Nursing facility utilization fee (15-60-102 & 15-60-210), intermediate care facility utilization fee (15-67-102(3))

Date Due – Nursing facility utilization fee due the last day of the month following the close of the calendar quarter (15-60-201), intermediate care facility utilization fee due the month following the close of the calendar quarter (15-67-201(1))

Applicable Tax Rate(s): Nursing facility utilization fee of \$8.30 per bed day, and Intermediate care facility utilization fee of 6% of a facility's quarterly revenue divided by the quarterly bed days

Distribution: Nursing facility utilization fee: for fees paid by the Montana Mental Health Nursing Care Center, 30% to the general fund and 70% to the prevention and stabilization account; for all other facilities, \$2.80/bed day to the general fund and \$5.50/bed day to the nursing facility fee account. Intermediate care facility utilization fee: for fees paid by the Montana Developmental Center, 30% to the general fund and 70% to the prevention and stabilization account.

FY 2005 – 0.39%	FY 2008 – 0.29%	FY 2011 – 0.29%
FY 2006 – 0.33%	FY 2009 – 0.30%	FY 2012 – 0.27%

Revenue Estimate Methodology:

Data

Data for this source are obtained from the Department of Revenue (DOR), the Department of Public Health and Human Services (DPHHS), and the state accounting system (SABHRS). DOR provides the number of taxable bed days occupied by clientele of private and state run nursing homes. DPHHS provides counts on the bed days at the Montana Developmental Center (MDC) and total revenues collected, which are used in the calculation of the intermediate care facility fee. SABHRS data provides aggregate historic collections of the nursing facility fees.

Analysis

The nursing facility fees are estimated using a negative time trend to project future bed days at nursing care facilities. In addition to private nursing homes, the Montana Mental Health Nursing Care Center (MMHNCC) is required to pay the nursing facility fee. The MMHNCC component of the tax is calculated separately, making use of the bed days that are calculated in the estimate for “Institutional Reimbursements.” The bed days are multiplied by the fee of \$8.30 to obtain the estimate for the MMHNCC nursing fee.

MDC is the only intermediate care facility in Montana. The intermediate facility fee is projected by applying the average growth rate of the past fiscal years to the last year of actual revenue collections at MDC, FY 2012.

The fiscal year estimates for these two sources are summed to provide the total nursing facility fees estimates.

Public Institution Reimbursements

Revenue Description: The Department of Public Health and Human Services (DPHHS) receives reimbursement for the cost of sheltering and treating residents at the Montana Developmental Center (MDC), the Montana Mental Health Nursing Care Center (MMHNCC), Montana State Hospital (MSH), Montana Chemical Dependency Treatment Center (MCDC), and the Montana Veterans' Home (MVH). There are four sources of reimbursement income: state and federally matched Medicaid monies, insurance proceeds from companies with whom the resident is insured, payments by residents or persons legally responsible for them, and federal Medicare funds. Most of the reimbursements come from federal Medicaid payments.

Three variables determine the level of Medicaid nursing home payments: the number of patient days eligible for Medicaid reimbursement, the reimbursement rate per patient day, and the private resources of Medicaid patients.

Statutory Reference:

- Tax Rate (MCA) – 53-1-402 (requirement to pay)
- Tax Distribution (MCA) – 53-1-413
- Date Due – monthly (53-1-405(3))

Applicable Tax Rate(s): N/A

Distribution: Revenue collected from the above sources is deposited in the general fund with the following exceptions:

1. Reimbursements from MDC and MSH are first used to pay debt service on bonds issued to fund construction at these facilities. The remainder is deposited into the general fund.
2. Reimbursements received MVH and MCDC are deposited into a state special revenue account and appropriated to the facilities.

Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue:

FY 2004 – 1.31%	FY 2007 – 0.58%	FY 2010 – 1.35%
FY 2005 – 0.82%	FY 2008 – 0.78%	FY 2011 – 1.13%
FY 2006 – 0.75%	FY 2009 – 0.78%	FY 2012 – 0.78%

Revenue Estimate Methodology:

Data

Data are collected from the DPHHS and the state accounting system (SABHRS) to develop the estimate for the public institution reimbursements. In addition to residency data, DPHHS provides the data used to develop relationships of payment patterns of individuals and insurance companies to the federal government reimbursements (Medicaid and Medicare). SABHRS provides historical data used to assess the accuracy of the estimates.

Legislative Fiscal Division

Revenue Estimate Profile

Public Institution Reimbursements

Analysis

The largest component of Montana’s institutional reimbursements is Medicaid, as seen in the figure below. Medicaid and Medicare payments are responsible for most of the variability in reimbursement collections, due to the changes in the FMAP rates for the state. The FMAP rates are set annually based on the state’s relative per capita income. States like Montana, with a relatively low per capita income and a higher FMAP rate, receive more federal assistance than states with a higher per capita income. The American Recovery and Reinvestment Act of 2009 temporarily increased the FMAP rate. The enhanced rate will no longer be in effect for the forecast period. Most of the Medicare payments result from billings at MSH, while most Medicaid payments are generated through care at MMHCC.

Estimates for institutional reimbursements are derived using average daily population (ADP) estimates and reimbursement rates provided by DPHHS for three state hospitals: MDC, MMHCC, and MSH. Both the ADP and the facility rates are estimated with expected growth percentages. The ADP is adjusted by Medicare and Medicaid eligibility rates. The forecast FMAP rate is adjusted for the state fiscal year. The final step is to combine the estimates by payment type estimates.

Adjustment and Distribution

Gross reimbursements must be reduced by two debt service payments in each fiscal year. The debt service is the result of bonds issued for the purpose of facility upgrades.

Tobacco Settlement

Revenue Description: Montana receives revenue as a settling party to a Master Settlement Agreement (MSA) with four original tobacco companies and 56 subsequent companies to end a four-year legal battle with 46 states, Puerto Rico, American Samoa, the U.S. Virgin Islands, the North Mariana Island, Guam and the District of Columbia (52 total settling entities).

Montana was eligible for four types of payments: reimbursement for legal costs (FY 2000), five initial payments (FY 2000 through FY 2003), on-going annual payments, and strategic contribution payments (FY 2008 through 2017). The MSA places no restrictions on how the settling parties spend the money.

The total amount of tobacco settlement funds available to Montana is affected by a number of adjustments. These may include inflation, sales volume changes, non-participating manufacturers (NPM) adjustment for the loss of market shares, operating income of the original four tobacco companies, number and operating income of subsequent participating manufactures, number of states reaching state specific finality, settlements reached by the four states not party to the agreement (Florida, Texas, Minnesota, and Mississippi), litigation offsets, disputed payments, and federal tobacco legislation offsets among others.

The reduction for the NPM adjustment was first included in the revenue estimates beginning FY 2006. Amounts paid by manufacturers who participate in the MSA may decrease if they have lost market shares and it is proven that a significant portion of the loss (to companies not participating in the MSA) is due to the disadvantages caused by the MSA. An economics firm must determine if this is the case. The adjustment does not apply if a state has enacted “model statutes” and enforced them. Although it has not yet been determined if all these conditions have been met, it is expected that participating manufactures will withhold a portion of their payments in disputed escrow accounts until the matter is resolved, thus reducing payments to the settling entities.

Statutory Reference:

Tax Rate – NA

Tax Distribution (MCA) – Montana Constitution, Article X11, Section 4; 17-6-606; 53-4-1011

Date Due – annual payments from settling entities due April 15th (Master Settlement Agreement, Chapter IX(c)), General Tobacco annual payments through calendar 2016 due August 30th (General Tobacco Adherence Agreement)

Applicable Tax Rate(s): NA

Distribution: Due to passage of Constitutional Amendment 35 by the electorate in November 2000, the legislature is required to dedicate no less than 40% of tobacco settlement money to a permanent trust fund. Since the legislature has not yet determined the exact percentage to be deposited to the trust fund, the revenue estimate assumes 40%. For FY 2003, the remaining 60% of the money was deposited to the general fund. Due to passage of Initiative 146 by the electorate in November 2002, beginning FY 2004, 32% of the tobacco settlement money funds tobacco prevention programs and 17% of the funds is used for the Children’s Health Insurance Program (except in the 2011 biennium [due the enactment of HB 676] when the allocation was used to fund the healthy Montana kids plan). In HB 743, the 2007 Legislature added chronic disease programs to the allowable uses of the 32% distribution. The remaining 11% of the money is deposited to the general fund.

Revenue Estimate Profile

Tobacco Settlement

Distribution Chart:

Collection Frequency: Annual payments are expected each April 15th into perpetuity. General Tobacco, a subsequent participating manufacturer, is required to make annual payments every August 30th through calendar 2016 for obligations incurred from 2000 to 2003.

% of Total General Fund Revenue:

FY 2004 – 0.21%	FY 2007 – 0.16%	FY 2010 – 0.21%
FY 2005 – 0.19%	FY 2008 – 0.19%	FY 2011 – 0.18%
FY 2006 – 0.16%	FY 2009 – 0.23%	FY 2012 – 0.18%

Revenue Estimate Methodology:

The derivation of the tobacco settlement revenue estimate involves many factors. The Master Settlement Agreement specifies base amounts to be paid by all participating manufacturers, but also allows various adjustments to be made to these payments.

Data

The Master Settlement Agreement, signed by the settling entities and participating tobacco manufacturers (PM), is the driving document for the procedure to use in determining how much the original participating manufacturers (OPM) to the agreement and the subsequent participating manufacturers (SPM) have to pay to the settling entities. PriceWaterhouseCoopers, the independent auditor to the agreement, gathers all the data and makes all the calculations required by the Master Settlement Agreement for determining what the PM owe. Documents produced by PriceWaterhouseCoopers provide the historic data needed to project future payments. Staff at the Montana Attorney General's Office and the National Association of Attorneys General may also be consulted. Since an adjustment for a change in volume of cigarettes shipped is necessary, various knowledgeable sources are consulted as to expected changes in smoking or the sale of cigarettes.

Payments

Currently, there are two types of payments from OPM:

1. On-going annual payments to be received April 15th each year of which Montana receives 0.4247591%. These payments are to be made in perpetuity and increased in FY 2008 and will increase again in FY 2018; and
2. Strategic contribution payments are to be made from FY 2008 through FY 2017 of which Montana receives 1.0447501%.

Legislative Fiscal Division

Revenue Estimate Profile

Tobacco Settlement

The table below shows the total of these payments available to all settling entities before any adjustments.

Manufacturers who subsequently participate in the agreement also make payments based on the total annual and strategic contribution payments required by the OPM. The amount of these payments is also subject to various adjustments.

Adjustments

There are five potential adjustments to the payments.

1. Inflation – This adjustment increases the amount owed by PM. The set amounts of the annual and the strategic contribution payments are increased by the greater of 3% or the amount of the Consumer Price Index for Urban Consumers. The effect is cumulative so that the previous year’s inflation percentage is increased by the current year’s amount plus the amount of the current year’s percentage. The chart shows the annual and cumulative inflation factors.

2. Volume – As the number of cigarettes shipped nationally decreases, payments by PM are reduced. The current number of cigarettes is compared to the 1997 base number of 475.7 billion cigarettes. A proxy for the estimated annual change in the number of cigarettes shipped is determined by developing an estimate for the percentage change in cigarette consumption. For this analysis, the trend (downward) of the number of cigarette shipped from FY 2000 to FY 2012

Legislative Fiscal Division

Revenue Estimate Profile

Tobacco Settlement

was applied to estimate each subsequent fiscal years. Like the inflation adjustment, the effect is cumulative so that the previous year's percentage adjustment is increased by the current year's amount plus the amount of the current year's percentage. According to the settlement agreement, the cumulative percentage is then reduced by 2%. The chart shows the annual and adjusted cumulative volume factors.

3. Operating income – If the aggregate operating income from the OPM sales of cigarettes exceeds the 1996 base amount of \$7,060.840 million, as adjusted for inflation (see above) and by the percentage of states who have finalized acceptance of the agreement (100% since calendar 2001), then the dollar amount of the volume reduction is reduced and the amount of OPM payments increases. This adjustment has not been applied since 2000.
4. Previous settling states – Previous to the Master Settlement Agreement, four states had settled lawsuits with certain cigarette manufacturers. The agreement recognized this by allowing reductions to the OPM annual payments (as adjusted for inflation and volume) of 12.45% through the FY 2007 payment, 12.24% through the FY 2017 payment, and 11.07% thereafter.
5. Non-participating manufacturers (NPM) – If tobacco manufacturers who participate in the Master Settlement Agreement lose market share to those manufacturers who do not, their payments may be reduced. It must be shown that there was a loss of market share to NPM and that the disadvantages caused by the agreement were a significant factor contributing to the loss. However, the NPM adjustment does not apply to a state that had a “qualifying statute” in effect for the full year in question and had diligently enforced it. The “qualifying statute” requires a manufacturer who is not a PM to pay into a state-specific escrow account \$0.0167539 per cigarette sold in that state in CY 2006 and \$0.0188482 thereafter. Money in the account may be used to pay a judgment or settlement against the manufacturer. The Montana legislature enacted SB 359 (1999 session) and HB 663 (2003 session) in response to the agreement (see Title 15, Chapter 11, Parts 4 and 5). Although the agreement’s independent auditor calculates the NPM adjustment, it has never applied it to required payments.

The NPM adjustment is three times the market share loss of PM. Market share loss is determined by subtracting the current year market share of PM from the 1997 base market share of 99.5835% less 2% or 97.5835%. This percentage difference is multiplied by the annual payment amount adjusted for inflation, volume, and previous settling states. If the computed market share loss exceeds 16-2/3%, the formula changes to reduce the percentage adjustment. For this to occur, the change in market share for all PM would have to fall to 80%. It is unlikely that this will occur. Based on this formula, the NPM adjustment could reduce Montana’s payments by a maximum of \$4.0 million in FY 2013, \$3.9 million in FY 2014 and \$3.9 million in FY 2015, if all the conditions were met. The estimates include a portion of these reductions; not because all the conditions have been met, but because the PM may dispute a portion of a payment. Many PM feel the adjustment should be applied and have subsequently deposited disputed amounts into special escrow accounts until the issue is resolved. However, not all companies dispute the full amount, so the revenue estimate reduces the maximum amount that could be disputed by a percentage adjustment. The end result for the settling entities is that some portion of the money is unavailable even though the adjustment was not applied to the payments. This

Legislative Fiscal Division

Revenue Estimate Profile

Tobacco Settlement

unavailability of money has occurred in Montana: FY 2006-\$3.5 million, FY 2007- \$3.0 million, FY 2008-\$2.3 million, FY 2009-\$2.3 million, FY 2010-\$3.2 million, FY 2011-\$4.6, and FY 2012-\$3.9 million. It is anticipated that PM will continue to dispute a portion of future payments.

Analysis

Once adjustments amounts have been calculated, the applicable adjustments to the OPM and SMP payments can be applied and other revenue components calculated.

OPM Annual Payment - The estimate for tobacco settlement revenue from OPM is derived by first multiplying the payment amount by 1 plus the cumulative percentages for the inflation and volume adjustments and the previous settled states' percentage then adding the dollar amount of the operating income adjustment (zero) and the NPM adjustment. To this total amount, Montana's allocation of 0.4247591% is applied.

SPM Annual Payment - The estimate for tobacco settlement revenue from SPM is derived by a five-step process:

1. The volume adjustment (a reduction) is calculated by multiplying the annual OPM amount by the cumulative volume percentage.
2. A market share adjustment (a reduction to the amount owed) is calculated by: a) subtracting the volume adjustment, derived above, from the OPM amount; b) multiplying the result by a market share proxy to derive the base amount owed; c) the inflation adjustment is applied by multiplying the annual OPM amount by the cumulative inflation percentage; and d) the inflation adjustment is added to the base amount owed.
3. The proxy is calculated in the last completed year by dividing the SPM adjusted base payment (adjust for volume) by the total known amount due after adjustments for market share changes. The proxy from the last known fiscal year is used in all subsequent years.
4. The NPM maximum adjustment (a possible reduction), as determined above, is calculated. Since not all companies will dispute the entire amount, a percentage is applied to reduce the reduction. For FY 2008, this percentage was 61.6% and is used in all subsequent years.
5. The total SPM amount is adjusted by the above three adjustments and multiplied by 0.4247591% to obtain Montana's share.

OPM Strategic Contribution Payment – From FY 2008 through FY 2017, the OPM owe yearly strategic contribution payments to the settling entities in the amount of \$861,000,000. This amount is increased by the inflation adjustment and decreased by the volume adjustment, both described above. The result is multiplied by Montana's share of 1.0447501%.

SPM Strategic Contribution Payment – From FY 2008 through FY 2017, the SPM owe yearly strategic contribution payments to the settling entities based on the OPM amount of \$861,000,000. This amount is increased by the inflation adjustment, decreased by the market share adjustment, and decreased by the volume adjustment, all described above. The result is multiplied by Montana's share of 1.0447501%.

General Tobacco – The General Tobacco Company joined the Master Settlement Agreement in August 2004 and will make future payments the same as the other SPM. However, the company entered into a separate agreement with the settling entities for making the required payments owed retroactively from the date of its joining to the date the Master Settlement Agreement was signed. These obligations total \$272.3 million. This "principal" amount will be paid yearly over a 12-year period based on a percentage schedule based on the year.

For FY 2014 and 2015, the percentage of the "principal" to be paid is 12% and 13%, respectively. Interest on unpaid balances at 5% is then added to the "principal" payment. Once the total annual payment is calculated, it is multiplied by 0.4247591% to obtain Montana's share.

Adjustments and Distribution

Once total tax revenue for each fiscal year is determined, the applicable distribution percentages are applied.
