Rep. Bob Bergren, House Speaker
Senator Keith Bales, Chair, Senate Finance Committee
Rep. Jon Sesso, Chair, House Appropriations Committee
Senator Jeff Essmann, Chair, Senate Taxation
Rep. Bob Lake, Chair, House Taxation Committee
Senator Jim Peterson, Senate Majority Leader
Rep. Margaret Campbell, House Majority Floor Leader
Senator Carol Williams, Senate Minority Leader
Rep. Scott Sales, House Minority Leader

FROM: Terry W. Johnson, Principal Fiscal Analyst

RE: General Fund Revenue Update Number 4

PURPOSE OF REPORT

During a January meeting with House and Senate leadership, the Legislative Fiscal Division (LFD) told legislators that LFD staff would provide periodic updates on the rapidly changing economic conditions and the potential impact on general fund revenue estimates. It is critical for the legislature to be apprised of these impacts in order to craft a state budget that is balanced as required by the constitution. The estimates provided in this report are based on economic conditions and trends observed at this time and are subject to change as more information becomes available.

This is the fourth report designed to update the legislature on recent economic trends and the corresponding outlook for FY 2009, 2010, and 2011 general fund revenue estimates. This analysis is based on data received through early April 2009 and includes potential economic impacts of the proposed federal economic stimulus package as incorporated by IHS Global Insight (IHS) into their economic forecasts. This report is presented in three sections. The first section summarizes the type of new information that has become available to the LFD since our revised revenue estimate recommendations were prepared in mid-March, 2009. The second section summarizes the results of our analysis and the impact on anticipated general fund revenue collections. And the third section, provides a "what to watch for" in subsequent updates to this report expected to be issued by mid-June.

THE BOTTOM LINE

The LFD estimates used in our pre-session budget analysis were based on data received as of early December 2008. At that time, the revised LFD recommendations were \$135 million below the RTIC November estimate for FY 2009, 2010, and 2011. Further analysis in January, February, and March showed that there was an additional \$85 million (January estimate), \$31 million (February estimate), and \$41 million (March estimate) below the RTIC estimates for a total reduction of \$292 million for the three year period. The House Taxation committee, based on the March report, adopted the anticipated revenue reductions of \$292 million and the associated assumptions used to produce the estimates. HJ2, the revenue estimating resolution, has been adjusted for the revised general fund revenue estimates.

This analysis shows that economic conditions as forecast by IHS may have stabilized and that further adjustments to the revenue estimates are not necessary at this time. Using the IHS forecasts, our analysis shows that the revenue outlook has improved by a minimal amount and that the revenue estimates could be adjusted upward by \$16.8 million for the three year period. If included, this would bring the total recommended reduction from the RTIC original estimates to \$275.0 million for the three year period, FY 2009, 2010, and 2011.

During the next three months, significant information will be received on withholding and estimated payments as well as refund amounts for individuals. As stated in this report and in previous reports, individual and corporation tax collections continue to show signs of strength especially when compared to collection information reported in other states. Each month, our analysis has highlighted these trends but has also emphasized that changes in these collection patterns will be forthcoming in subsequent months.

As of the end of March, withholding tax collections are definitely showing signs of weakness. The change in withholding tax collections from the 1st quarter 2009 compared to 1st quarter 2008 is alarming – a decline of 4.3 percent. Withholding taxes are a good indicator of the current strength in individual income taxes because it comes largely from current wage and salary income. As assumed in HJ2, wage and salary income growth was expected to increase only 0.75 percent from calendar 2008 to 2009. If the first quarter data is not an anomaly, then the revenue estimate for individual income tax could be overstated. Because there could be timing issues and other types of non-economic conditions that may have caused this decline, it would be premature to extrapolate this trend into the future without additional data. Since wage and salary income accounts for over 60 percent of total income taxed, a small change in this income category can change the revenue estimate significantly.

As mentioned above, if the revised economic forecasts of IHS are used, our analysis shows that the revenue outlook has improved by a minimal amount (\$16.8 million) for the three year period. However, the uncertainty related to withholding tax collections is significant enough that further changes to the revenue estimates contained in HJ2 are not recommended at this time.

NEW INFORMATION

Each month, the LFD receives a revised national economic outlook from IHS. This is the economic forecasting company that Montana has a contract with to provide national and regional economic forecasting services. This service includes written material as well as a variety of economic forecasts for “hundreds” of economic variables. The information received from IHS in early April reflects their forecasts as of March 2009 for the national economy.

The statewide budgeting and accounting system (SABHRS) produces a “snapshot” of accounting transactions on the last day of each month. The LFD has internal computer processes to download this data and produce a variety of reports and spreadsheets. While this data is critical in monitoring year to date collection trends, this system does not contain any tax return or economic information such as individual and corporate income components, oil and gas production, and prevailing interest rates. This type of detailed data must be extracted from other sources provided the information is available. The accounting transaction detail that is available to the LFD reflects revenue collections through March 2009. Historical collection data by month are available back to FY 2000.

The LFD, in cooperation with the Department of Revenue (DOR), developed a process whereby the DOR sends the LFD tax return data for fifty different tax types at the beginning of each month. This data is extremely helpful in analyzing various trends that may be occurring within a given tax type. For example, the DOR data show oil production by calendar quarter as reported by the taxpayer. This data is invaluable in tracking production trends throughout the year. It should be noted, however, that since oil production taxes are payable sixty days after the end of quarter, there is a considerable lag time before the LFD can analyze the data. Nonetheless, this new data was received April 2 and included return information captured in the DOR system as of March 31, 2009.

During each month, there are numerous articles and economic reports that are produced by newspapers, economic websites, and federal entities. To the extent possible, this information is reviewed for relevancy to Montana’s economy and the impact it may have on state revenues. Usually this information is for reference and does not necessarily have a quantifiable impact on our revenue outlook. This type of information is received and reviewed daily throughout the month. Appendix A shows a high level summarization of the printed material we have been tracking since October, 2008.

Based on this new information, the following section of the report highlights our analysis of the new data and summarizes the total LFD recommended changes to the general fund revenue estimates for FY 2009, 2010, and 2011.

RESULTS OF LFD ANALYSIS

The primary components of total general fund revenues are individual and corporate income taxes, property taxes, investment earnings, and natural resource taxes. If all of these components are added together, almost 75 percent of total general fund revenues are produced from these sources. The analysis discussed in this report focuses on these key sources but also includes some additional information relevant to some of the smaller revenue sources.

The first general fund revenue update report issued on January 23 focused on key economic assumptions and the potential impacts on general fund revenue estimates for FY 2009, 2010, and 2011. This report is prepared in a similar format with an additional section that discusses collection data through March 2009 compared with collections through March 2008. This type of comparison can provide insight to the strengths or weaknesses of year to date collections and can help identify trends that may be indicative of collections for the remainder of fiscal 2009.

YEAR TO DATE COLLECTIONS

Figure 1 shows general revenue collections by individual revenue source. This table is produced monthly based on the revenue transactions recorded on SABHRS. The information shown in Figure 1 represents revenue collections for the first nine months of FY 2008 compared to the first nine months of FY 2009. As shown at the bottom of Figure 1, total general fund collections are \$38.2 million (3.5 percent) above last year. The HJ2 total general fund revenue estimate as adopted by the House Taxation committee on March 20, 2009, expects revenues to be 4.1 percent below FY 2008 collections.

This information seems to indicate that overall, general fund revenue collections are on pace to exceed the HJ2 estimate. However, there are several issues that will change this outlook as we proceed through the remainder of FY 2009. Some of the more significant issues are highlighted in the next section of the report.

Insurance Tax

Insurance tax revenues are \$5.8 million (19.4 percent) below last year as of the end of March. This decrease is due to a revenue deposit schedule that is inconsistent with historical patterns and is further skewed by the impacts of Initiative 155. Based on information from SABHRS, the State Auditor's office deposited \$6.4 million to the Montana Healthy Kids Plan account, the fund created by the passage of Initiative 155. When these deposits are combined with year to date collections through March 31, insurance tax collections are on target with the HJ 2 revenue estimate. Last month, insurance tax collections appeared to be lagging the HJ 2 revenue estimate. Since some insurance coverage may be viewed as discretionary combined with reduced new car sales and housing starts, it would not be unreasonable to expect insurance tax revenues to decline during an economic recession. These collection trends will be monitored closely in subsequent months.

Individual Income Tax

Figure 2 shows more detailed individual income tax collection data for the first nine months of FY 2009 compared to the same period of FY 2008. As shown in the figure, total individual income tax collections are \$15.6 million (2.9 percent) above last year. This amount would suggest that individual income tax collections are slowing but are still holding up under the pressures of an economic recession. There are three items, however, that are worthy of note.

First, a mineral royalty withholding process was adopted by the last legislature which skews collection data between fiscal years. Since the legislation was effective January 1, 2008, only \$0.6 million of royalty withholding collections were received at this time last year. If these collections are removed from both years (for comparison purposes), total individual income tax collections are up about 0.6 percent instead of the 2.9 percent shown in Figure 2.

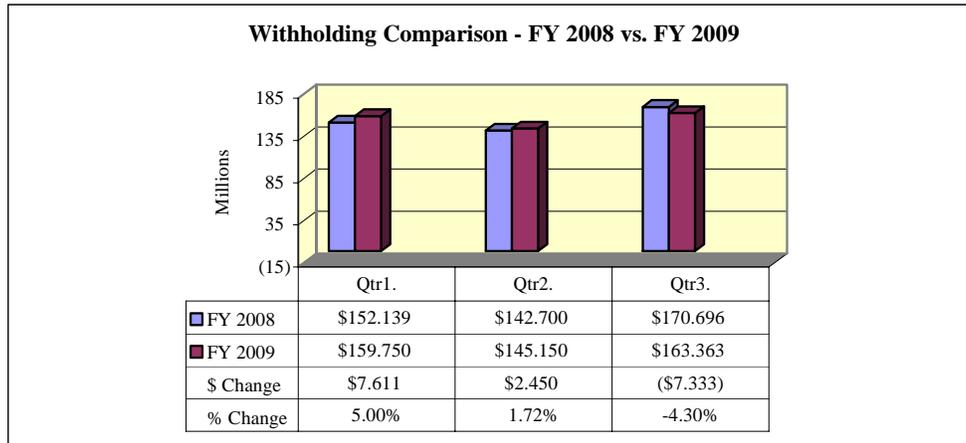

Second, wage and salary income is the largest income component of individual income taxes. Withholding tax can be a good indicator of the growth in wage and salary income for Montana. As shown in Figure 2, withholding taxes are up \$2.7 million (0.59 percent) over last year. While this is still a positive amount, it is an indication that wage and salary growth is slowing significantly in Montana. The rate of growth in withholding tax collections has been dropping each month since September when the rate was slightly above 5 percent. The assumption in HJ2 is for wage and salary income to increase by only 0.75 percent from calendar 2008 to 2009.

Figure 2

Individual Income Tax Comparison				
Revenue Code & Description	Through 3/31/2008 Fiscal 2008	Through 4/14/2009 Fiscal 2009	Difference	Percent Change
510101 Withholding Tax	465,535,482.35	468,262,684.81	2,727,202.46	0.59%
510482 Mineral Royalty WH Tax	590,001.44	13,134,536.12	12,544,534.68	2126.19%
510102 Estimated Tax	164,105,412.88	183,126,582.76	19,021,169.88	11.59%
510103 Current Year I/T	27,785,823.03	24,842,950.36	(2,942,872.67)	-10.59%
510105 Income Tax - Audit Collections	20,575,358.00	19,824,360.00	(750,998.00)	-3.65%
510106 Income Tax Refunds	(135,730,013.96)	(150,756,653.43)	(15,026,639.47)	11.07%
Totals	\$542,862,063.74	\$558,434,460.62	\$15,572,396.88	2.87%
Percent of Actual/Estimated	62.64%	65.65%		

Figure 2a shows a comparison of withholding tax collections between FY 2008 and FY 2009 by fiscal quarter. During the first quarter of this year (July through September), withholding collections were above last year by 5.0 percent. This growth rate slowed to 1.7 percent for the second quarter (October through December) and dropped below last year during the third quarter (January through March) to negative 4.3 percent. As stated above, withholding taxes can be a good indicator of the growth in wage and salary income for Montana. If the reduction observed in the third quarter continues for an extended period of time, the HJ 2 assumption for wage growth of 0.75 percent from calendar 2008 to 2009 may be too optimistic. Since 60 percent of total income reported on state tax returns is from wage and salary income, even a small change in the wage growth assumption can significantly impact the revenue estimate for individual income tax collections. Further collection data in subsequent months are necessary to confirm this trend.

Figure 2a

Third, estimated payments are \$19.0 million (11.6 percent) above last year. Review of this data by quarter shows strong growth in estimated payments between the third and fourth quarters of calendar 2008. While withholding tax collections are showing signs of weakness, estimated payments are not, at least not by the end of March. With a substantial drop in the equity markets, historical low interest rates, reductions in corporate profitability, and the beginning of a new calendar year (a new reporting period for the taxpayer) the next quarterly payments should show an entirely different trend when compared to the calendar 2008 3rd and 4th quarterly payments. The next quarterly payment is due April 15, 2009 and represents the first payment for calendar 2009. Information from the Montana Society of Certified Public Accountants reinforces this assertion.

Corporation Income Tax

Figure 3 shows more detailed corporation income tax collection data for the first nine months of FY 2009 compared to the same period of FY 2008. As shown in the figure, total corporation income tax collections are \$19.7 million (23.4 percent) above last year. This amount would suggest that corporation income tax collections are doing well and that corporations are holding up under the pressures of an economic recession. Further review of tax payment detail by corporation provides some additional insight to estimated payments. This data shows only minor changes in the estimated payments between the third and fourth quarters of calendar 2008. Unlike individual income tax collections, revenue collections data for corporation income taxes do not show any signs of weakening as of March 31. With announced job layoffs, business closures and/or cutbacks, significant consumer spending reductions, and construction plummeting, the next quarterly payments should show an entirely different trend when compared to the calendar 2008 3rd and 4th quarterly payments. The next quarterly payment is due April 15, 2009.

Figure 3

Corporation Income Tax Comparison				
Revenue Code & Description	Through 3/31/08 Fiscal 2008	Through 04/14/09 Fiscal 2009	Difference	Percent Change
510501 Corporation Tax	20,243,639.32	24,843,891.80	4,600,252.48	22.72%
510505 Corporation Tax Estimated Paym	70,610,062.08	76,777,748.19	6,167,686.11	8.73%
510502 Corporation Tax Refunds	(18,946,274.95)	(15,686,193.20)	3,260,081.75	-17.21%
510503 Corporation Tax-Audit Collect.	<u>12,555,425.00</u>	<u>18,270,847.00</u>	<u>5,715,422.00</u>	45.52%
Totals	\$84,462,851.45	\$104,206,293.79	\$19,743,442.34	23.38%
Percent of Actual/Estimated	52.68%	62.38%		

Oil and Gas Production Tax

Total oil and gas production tax collections are \$15.1 million (51.1 percent) above last year as of the end of March. These collections represent economic conditions for the 3rd quarter of calendar 2008 as compared to the 3rd quarter of calendar 2007. This increase was not unexpected since Montana oil prices averaged \$108.26 per barrel for the 3rd quarter of calendar 2008 versus \$70.14 per barrel for the 3rd quarter of calendar 2007. Preliminary fourth quarter calendar 2008 tax return data show a significant drop in tax collections as Montana oil prices averaged \$44.75 per barrel during the quarter, well below the \$79.94 per barrel average during the 4th quarter calendar 2007. The distribution of these oil and gas tax payments to state and local governments will be processed by late April.

Video Gaming Tax

Video gaming taxes are \$0.4 million (negative 1.2 percent) below last year as of the end of March. This decrease was noted in previous reports but it was premature to assess the trend until an accounting error was corrected in SABHRS. This correction was made during the month of February. Based on the corrected collection data, video gaming tax collections are lagging the HJ2 revenue estimate. The assumption contained in HJ2 was for revenues to increase by 5.4 percent from FY 2008 to FY 2009. If these trends continue for the remainder of the fiscal year, video gaming tax revenues could be below estimates by over \$4 million for fiscal 2009. Further collection data in subsequent quarters are necessary to confirm this trend.

TCA Interest Earnings

Treasury cash account (TCA) interest earnings are \$10.7 million (negative 45.3 percent) below last year as of the end of March. This decrease is due to the significant reduction in short-term interest rates that have occurred during FY 2009. According to the Montana Board of Investments, the short-term investment portfolio (STIP) yield averaged 1.03 percent for March, 2009. This compares to 5.5 percent average during September 2007 and 3.1 percent during March 2008.

Rental Car Sales Tax and Lodging Sales Tax

Combined, these two sources contribute about \$16.5 million to the general fund account. As shown in Figures 4 and 5, both of these tax sources are slightly below the collections through March 2008 compared to March 2009. While this trend does not substantially change the current general fund revenue outlook, the economic conditions that may be causing the slowdown in these revenue collections may be significant. According to the Institute for Tourism and

Recreation Research, University of Montana, “Montana can expect to see another decline in nonresident travel of 2 percent in 2009”. This decline is in addition to the 3.7 percent decline (preliminary) observed during 2008. Since tourism is a vital component of Montana’s economy, those businesses dependent on tourism dollars could be impacted resulting in reduced state revenues.

Figure 4

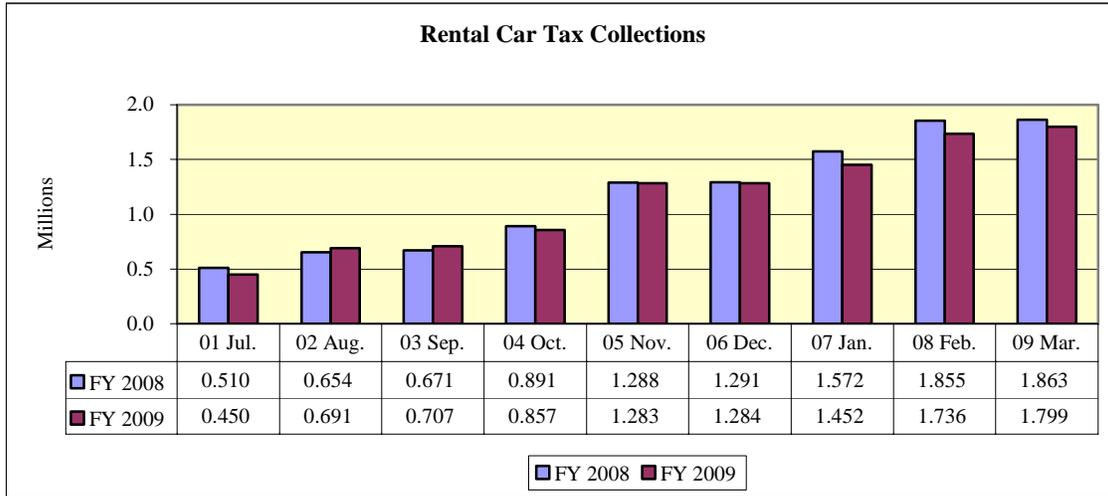

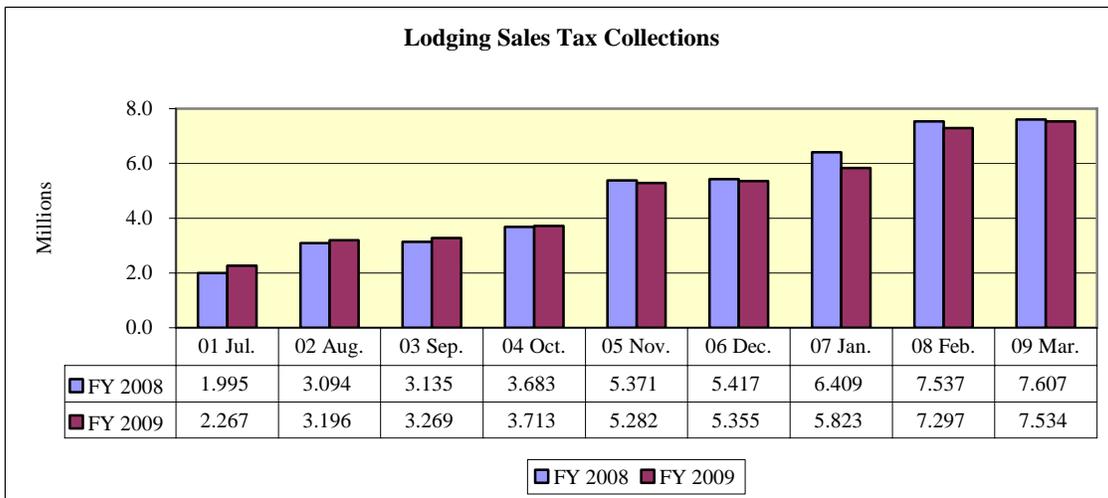

Figure 5

ANALYSIS OF ECONOMIC CONDITIONS

Individual Income Tax

Individual income tax assumptions for selected income components were analyzed and changed based on new IHS data. These components were wage and salary, capital gains, interest, dividend, rent, royalty and partnership, business, and retirement incomes. The consumer price

index forecasts of IHS were also reviewed. Based on this data, the individual income tax estimates are shown in Figure 6. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on March 20 and are now contained in HJ2. A positive number means the new estimate is above the amount contained in HJ2.

Figure 6

Individual Income Tax (in millions)		Estimated	Estimated	Estimated	Estimated
Month	General Fund Revenue Estimate	FY 2009	FY 2010	FY 2011	3 Year Total
November	Rev. & Transportation Committee (HJ2)	\$871.653	\$884.934	\$908.994	\$2,665.581
December	LFD Recommendations	854.823	856.291	880.781	2,591.895
January	LFD Analysis	851.275	839.189	860.512	2,550.976
February	LFD Analysis Adopted in HJ2	856.506	845.333	859.007	2,560.846
March	LFD Analysis Adopted in HJ2	852.615	838.750	850.014	2,541.379
April	LFD Analysis	850.748	839.289	855.324	2,545.361
Change Amount (Revised HJ2 to April LFD)		(\$1.867)	\$0.539	\$5.310	\$3.982

In general, most income components showed minimal change or some improvement from the February IHS forecasts. In general, the April amounts in Figure 6 are very similar to the January, February, and March amounts. The changes in the respective estimates are primarily driven by the changes in income components as well as the assumptions about inflation/deflation. Because the federal and state's tax structures are adjusted for the effects of inflation, lower inflation has the effect of increasing a taxpayer's liability and thus state revenues. This occurs because tax brackets, personal exemptions, and standard deduction amounts are increased by a lesser amount when inflation is low.

Corporation Income Tax

Corporation income tax assumptions for selected economic variables were analyzed and changed based on new IHS data. These variables were consumer consumption expenditures, US pre-tax profits, financial sector data (loans, interest rates, etc.) and commodity prices. Based on this data, the corporation income tax estimates are shown in Figure 7. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on March 20 and are now contained in HJ2. A positive number means the new estimate is above the amount contained in HJ2.

Figure 7

Corporation Income Tax (in millions)		Estimated	Estimated	Estimated	Estimated
Month	General Fund Revenue Estimate	FY 2009	FY 2010	FY 2011	3 Year Total
November	Rev. & Transportation Committee (HJ2)	\$156.132	\$136.293	\$149.352	\$441.777
December	LFD Recommendations	154.838	125.911	133.674	414.423
January	LFD Analysis	150.760	119.115	128.571	398.446
February	LFD Analysis Adopted in HJ2	157.715	117.579	124.250	399.544
March	LFD Analysis Adopted in HJ2	157.284	115.638	121.382	394.304
April	LFD Analysis	<u>157.570</u>	<u>117.486</u>	<u>123.448</u>	<u>398.504</u>
Change Amount (Revised HJ2 to April LFD)		\$0.286	\$1.848	\$2.066	\$4.200

The April LFD analysis amount for FY 2009 has been adjusted for an unusually large audit collection covering several previous tax periods. This one audit increased FY 2009 collections by \$7.5 million but is not expected to impact collections in subsequent years.

Oil and Gas Production Tax

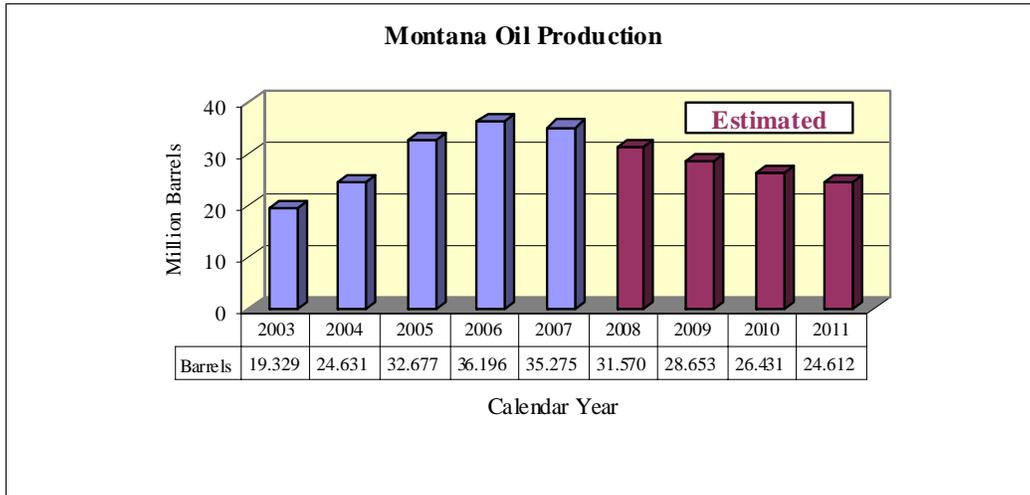

Both oil and gas production and price assumptions were analyzed and changed based on new IHS and DOR data. Based on this data, the oil and gas production general fund estimates are shown in Figure 8. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on March 20 and are now contained in HJ2. A positive number means the new estimate is above the amount contained in HJ2.

Figure 8

Oil & Gas Production Tax (in millions)		Estimated	Estimated	Estimated	Estimated
Month	General Fund Revenue Estimate	FY 2009	FY 2010	FY 2011	3 Year Total
November	Rev. & Transportation Committee (HJ2)	\$116.771	\$100.066	\$105.177	\$322.014

February	LFD Analysis Adopted in HJ2	94.641	69.831	85.220	249.692
March	LFD Analysis Adopted in HJ2	94.769	66.930	82.423	244.122
April	LFD Analysis	<u>94.787</u>	<u>73.001</u>	<u>84.795</u>	<u>252.582</u>
Change Amount (Revised HJ2 to April LFD)		\$0.018	\$6.071	\$2.371	\$8.460

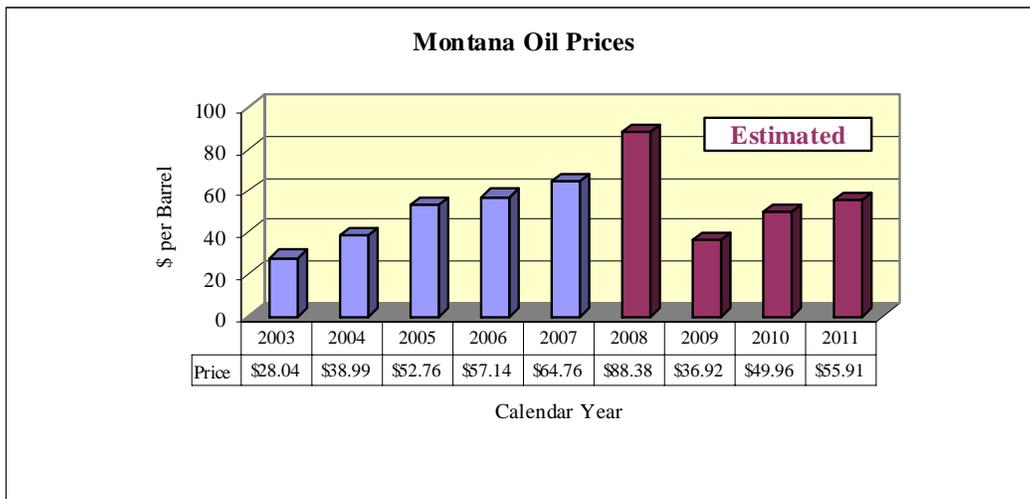

Figures 8A and 8B show the underlying assumptions for Montana's oil production and price. As seen from Figure 8A, total production is expected to decline significantly, over thirty percent from calendar 2007 to estimated calendar 2011. This trend is based on tax return data for calendar 2008 compared to calendar 2007. With the outlook for prices to remain well below previous levels and the limited number of oil rigs in Montana, the probability of this production decline abating is very low.

Figure 8A

As shown in Figure 8B, Montana oil prices are expected to average slightly under \$37 per barrel during calendar 2009. While staff has received several comments about Montana oil selling for far less than this amount, it should be pointed out that this is an average price for all grades of oil and represents an average price for the entire calendar year. Oil prices are expected to edge upward in calendar 2010 and 2011 as the nation begins to recover from the economic recession.

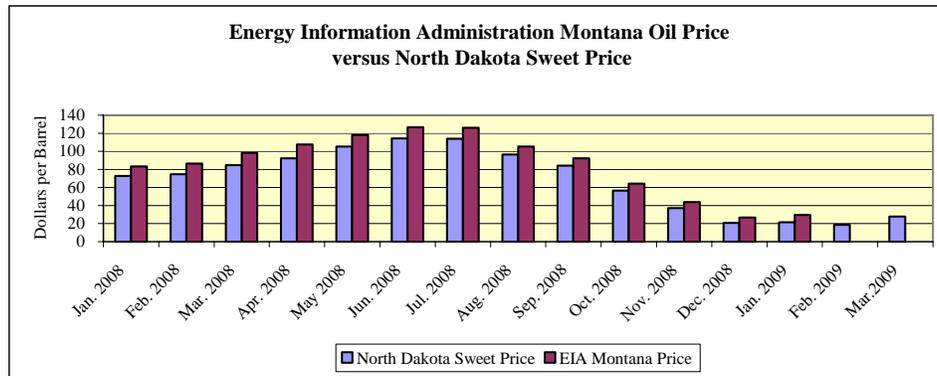

Figure 8B

After the January report was issued, some legislators suggested we review the oil price listings posted by SemCrude, L.P., a crude oil purchaser. SemCrude posts, on a daily basis, a number of prices for a variety of oil types. Figure 8C shows the correlation between the North Dakota Sweet price as compared to the Energy Information Administration (EIA) price for Montana. Our analysis showed there is a correlation between these prices and that, on average, Montana's well head price is higher than the North Dakota Sweet price. Since this data is posted daily, this

provides staff an additional tool to more closely monitor Montana oil prices. EIA data are usually three months behind and tax return data filed with the DOR are also lagged.

Figure 8C

US Mineral Royalty

The adjustment to the US mineral royalty estimate is the result of the changes in the assumptions for oil and gas production and price. Based on this data, the US mineral royalty estimates are shown in Figure 9. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on March 20 and are now contained in HJ2. A positive number means the new estimate is above the amount contained in HJ2.

Figure 9

US Mineral Royalties (in millions)		Estimated	Estimated	Estimated	Estimated
Month	General Fund Revenue Estimate	FY 2009	FY 2010	FY 2011	3 Year Total

Change Amount (Revised HJ2 to April LFD)		\$0.176	\$0.157	(\$0.041)	\$0.292

Metalliferous Mines Tax

This source was not changed from the March LFD analysis. The following discussion is the same written text provided in the March report.

The metalliferous mines tax was adjusted to reflect the significant drop in several metal prices. Reductions in the price estimates were made for the following commodities: copper, silver, lead, zinc, platinum, palladium, and molybdenum. Adjustments for calendar 2008 prices were based on return data for the first six months combined with estimated prices for the remainder of

calendar 2008. Estimates for calendar 2009 through 2011 were based on current prices. Based on this data, the metalliferous mines tax estimates are shown in Figure 10. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on March 20 and are now contained in HJ2. A positive number means the new estimate is above the amount contained in HJ2.

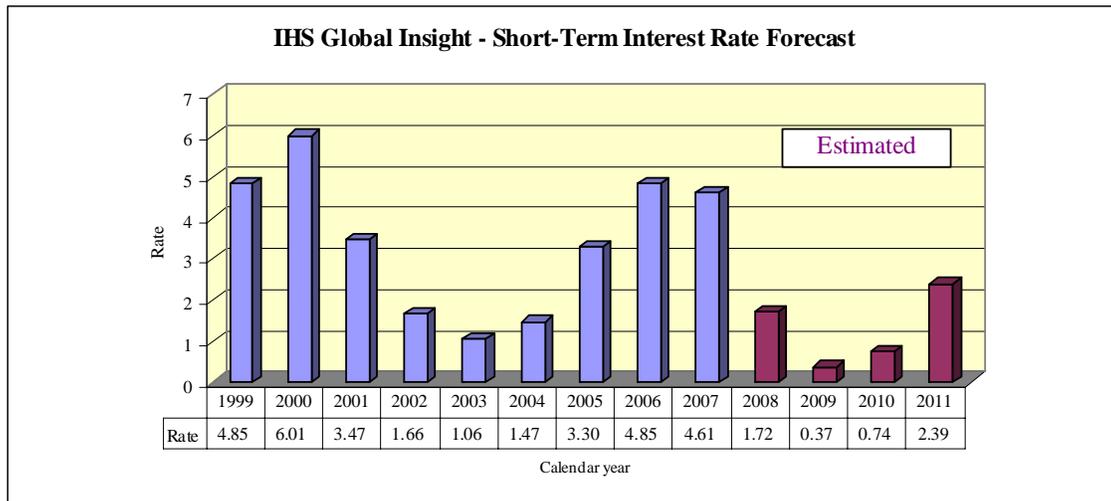

Figure 10

April	LFD Analysis	6.777	3.248	3.279	13.304
Change Amount (Revised HJ2 to April LFD)		\$0.000	\$0.000	\$0.000	\$0.000

Treasury Cash Account Interest

The treasury cash account interest estimate is impacted by the underlying assumptions for short-term interest rates and cash available for investment. Short-term interest rates as estimated by IHS are at historically low levels for calendar 2009 with little change in 2010 and a modest improvement by calendar 2011. Figure 11 shows the historical and forecast rates as prepared by IHS.

Figure 11

After a review of current investment income and the average daily cash balance in the treasury cash account, the average cash balance was adjusted upward to reflect current trends as well as the legislature’s desire to maintain an ending fund balance consistent with the level recommended by the executive. Based on this data, the treasury cash account interest estimates

are shown in Figure 11A. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on March 20 and are now contained in HJ2. A negative number means the new estimate is below the amount contained in HJ2.

Property Tax

This source was not changed from the March LFD analysis. The following discussion is the same written text provided in the March report.

Since the RTIC meeting in November, revised property tax values from the DOR were received for FY 2009. These new values were incorporated into the estimates. In addition, two court cases were resolved that impacted property tax estimates. Northwestern settled its case with the state and the Montana Supreme Court ruled in favor of Omimex over the proper classification of its pipeline properties. The impacts of these cases have been incorporated into the estimates.

In addition, the Montana Supreme Court denied a rehearing petition by the DOR on February 10, for the Omimex vs. Montana case. This court action results in the shifting of some class 9 properties (taxed at 12 percent) into class 8 properties (taxed at 3 percent). It is estimated by the DOR that this change will reduce total state and local tax collections by \$15.0 million. As of this date, there are two bills, HB 642 and SB 489 that have been introduced to address the pipeline property issue. HB 642 failed to meet the transmittal deadline. The potential impact of SB 489 has not been included in this analysis because the bill is a new tax policy proposal that impacts current law estimates. Based on this data, property tax estimates are shown in Figure 12. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on March 20 and are now contained in HJ2. A positive number means the new estimate is above the amount contained in HJ2.

Change Amount (Revised HJ2 to April LFD)		\$0.000	\$0.000	\$0.000	\$0.000

Cigarette Tax

This source was not changed from the March LFD analysis. The following discussion is the same written text provided in the March report.

The federal cigarette tax increased from \$0.39 per pack to \$1.00 per pack on April 1, 2009. This adjustment plus increases for other tobacco products is designed to fund an expansion of SCHIP (State Children’s Health Insurance Program). Based on recent consumption studies as well as Montana’s experience with previous cigarette tax increases, state cigarette tax revenues are expected to decline by \$11.3 million over the three year period due to the federal tax increase. This decline is based on a price elasticity factor of 0.44 which equates to a 5.89 percent decrease in consumption due to the price increase. A further adjustment of 2.3 percent was made for the year to date decline in consumption from FY 2008 to FY 2009. Based on this data, the cigarette estimates are shown in Figure 13. The impact of the federal tax increase on other tobacco products is being researched and is not included in Figure 13. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on March 20 and are now contained in HJ2. A positive number means the new estimate is above the amount contained in HJ2.

Figure 13

Cigarette Tax (in millions)		Estimated	Estimated	Estimated	Estimated
Month	General Fund Revenue Estimate	FY 2009	FY 2010	FY 2011	3 Year Total

Change Amount (Revised HJ2 to April LFD)		\$0.000	\$0.000	\$0.000	\$0.000

Vehicle Tax/Fee

This source was not changed from the March LFD analysis. The following discussion is the same written text provided in the March report.

Revenue collections through March 2009 compared to the same period of FY 2008 show that collections from vehicle tax/fee revenue are below expectations after nine months of collections. Based on data from the Department of Justice on vehicle counts by age, it appears there is a significant trend towards permanently registering older vehicles. This trend, combined with reduced new car sales forecast by IHS warrants an adjustment to the vehicle revenue estimate. Based on this data, the vehicle tax/fee estimates are shown in Figure 14. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on March 20 and are now contained in HJ2. A positive number means the new estimate is above the amount contained in HJ2.

Figure 14

April	LFD Analysis	112,419	111,919	109,574	333,912
Change Amount (Revised HJ2 to April LFD)		\$0.000	\$0.000	\$0.000	\$0.000

Liquor Profits

Effective FY 2008, the Governmental Accounting Standard Board (GASB) required governmental entities to report their assets/liabilities and revenues/expenditures for retirees (termed “other post-employment benefits”) separately from those for active employees. According to the new standard, the ability of state retirees to continue their policies within the state employee insurance system is considered an implicit rate subsidy and, therefore, must be recorded as a liability. While the state is required to report these liabilities, it has no legal obligation to expend funds. The liability is cumulative, resulting in all previous years’ liability being added to the current year’s liability. Because the liquor enterprise fund is affected by this new standard, the cumulative liability reduces the amount of liquor profits transferred to the general fund.

House Bill 141 would exclude the liquor enterprise fund from the new GASB standard. Without passage of this legislation, “current law” general fund revenue will be reduced by a total \$1.2 million for FY 2009, 2010, and 2011. HB141 has been tabled in the House Appropriations committee.

Based on this GASB standard plus a minor inflationary adjustment, the liquor profit estimates are shown in Figure 15. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on

March 20 and are now contained in HJ2. A negative number means the new estimate is below the amount contained in HJ2.

Figure 15

Liquor Profits		Estimated	Estimated	Estimated	Estimated
Month	General Fund Revenue Estimate	FY 2009	FY 2010	FY 2011	3 Year Total
November	Rev. & Transportation Committee (HJ2)	\$8.894	\$9.197	\$9.682	\$27.773

Lottery Profits

Effective FY 2008, the Governmental Accounting Standard Board (GASB) required governmental entities to report their assets/liabilities and revenues/expenditures for retirees (termed “other post-employment benefits”) separately from those for active employees. According to the new standard, the ability of state retirees to continue their policies within the state employee insurance system is considered an implicit rate subsidy and, therefore, must be recorded as a liability. While the state is required to report these liabilities, it has no legal obligation to expend funds. The liability is cumulative, resulting in all previous years’ liability being added to the current year’s liability. Because the lottery enterprise fund is affected by this new standard, the cumulative liability reduces the amount of lottery profits transferred to the general fund.

House Bill 141 would exclude the lottery enterprise fund from the new GASB standard. Without passage of this legislation, “current law” general fund revenue will be reduced by a total \$1.0 million for FY 2009, 2010, and 2011. HB141 has been tabled in the House Appropriations committee.

Based on this GASB standard plus a minor inflationary adjustment, the lottery profit estimates are shown in Figure 16. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on March 20 and are now contained in HJ2. A positive number means the new estimate is above the amount contained in HJ2.

Summary of LFD Analysis

Based on our analysis of the new data received from all the sources mentioned previously, the information indicates that total general fund revenue estimates could be increased by \$16.8 million as compared to the revenue estimates contained in HJ2. A majority of this amount is due to the changes in the underlying assumptions for individual income tax, corporation income tax, and oil and gas production tax. An adjustment (recommended in February) was required for cigarette taxes because of the impacts of the federal tax increase and also for vehicle tax/fee revenue because of lagging year to date collections. No further adjustments for these two sources are recommended at this time. In March, an adjustment was required for liquor and lottery profits because of the impacts of the GASB standard requiring governmental entities to report their assets/liabilities and revenues/expenditures for retirees (termed “other post-employment benefits”) separately from those for active employees. No further adjustments for these two sources are recommended at this time.

As discussed in the “Year To Date Collections” section of this report, insurance premiums tax appear to be back on target while video gaming tax collections continue to show signs of weakness when compared to the assumptions contained in HJ2. Further data are necessary to confirm these trends.

The total change in general fund revenue estimates are shown in Figure 17. The estimates as adopted by RTIC on November 18 (HJ2) and the LFD recommendations developed in December, January, February, and March are shown for reference. The change amount is calculated by comparing the HJ2 estimate with the April LFD analysis. The LFD March recommendations were adopted by the House Taxation committee on March 20 and are now contained in HJ2. A positive number means the new estimate is above the amount contained in HJ2.

February	LFD Analysis Adopted in HJ2	1,539.290	1,466.342	1,515.393	4,521.025
March	LFD Analysis Adopted in HJ2	1,534.351	1,449.960	1,495.669	4,479.980
April	LFD Analysis	<u>1,532.957</u>	<u>1,458.507</u>	<u>1,505.362</u>	<u>4,496.825</u>
Change Amount (Revised HJ2 to April LFD)		(\$1.394)	\$8.547	\$9.692	\$16.845

If the revised economic forecasts of IHS are used, our analysis shows that the revenue outlook has improved by a minimal amount. The changes by fiscal year are shown in Figure 17. However, the uncertainty related to withholding tax collections is significant enough that further adjustments to the revenue estimates contained in HJ2 are not recommended at this time.

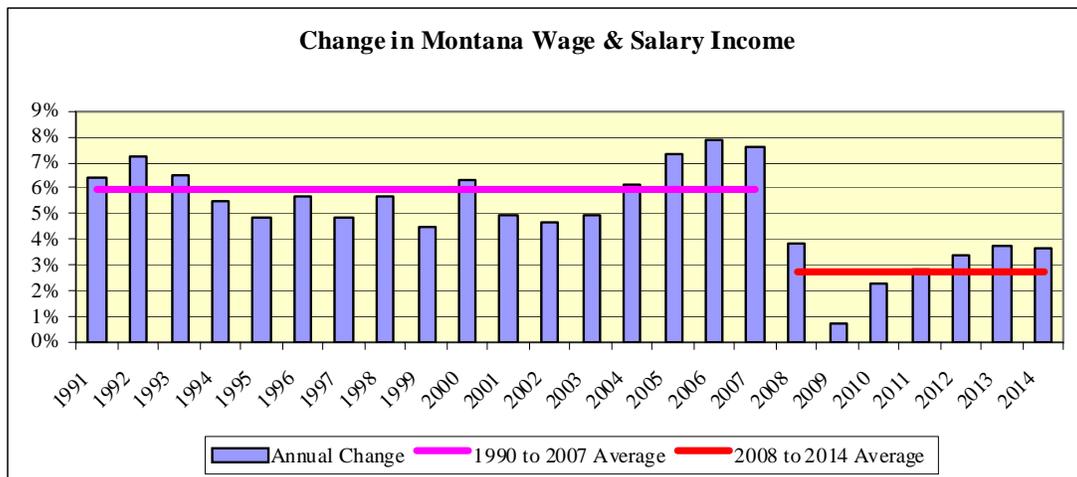

The legislature is faced with an extremely difficult task of developing a 2011 biennium budget in light of current economic conditions and how these conditions will affect future revenue collections. The duration and the intensity of the current economic recession not only will affect

the 2011 biennium revenues and disbursements, it more than likely will have a significant “drag” on the 2013 biennium outlook. As the new data were reviewed and analyzed by staff, two key points need to be stressed.

First, based on the revised IHS economic data, it appears that economic conditions may have stabilized. Revenue receipts, while currently strong, have legitimate reasons to explain why this should be occurring. As pointed out by the Bureau of Business and Economic Research, Montana’s economy did not show any significant signs of a slowdown until late last fall. For the most part, current revenue collections are a reflection of the pre-slowdown period and do not reflect the effects of the economic recession. For individual and corporation income taxes, year to date collection trends should not be viewed as an indication of future collections.

Second, the immediate task for the legislature is to adopt a balanced 2011 biennium budget. Economic uncertainty combined with an infusion of significant federal stimulus dollars, (to be used for one-time only spending) make the job of maintaining structural balance as well as an adequate ending fund balance a difficult job. Figure 18 shows percentage change in actual and forecast amounts for Montana wage and salary income as developed by IHS. As shown in the figure, the increase in Montana’s wage and salary income has averaged almost six percent from calendar 1990 to 2007. However, the IHS January forecast amounts from calendar 2008 to 2014 averages 2.8 percent. If these forecasts are correct, the prospects for a return to robust revenue growth during the 2013 biennium may be unlikely.

Figure 18

WHAT TO WATCH FOR NEXT MONTH

This section of the report highlights the new data available between now and mid-June. This data should help staff and legislators assess any new trends that may be developing with general fund revenue estimates.

APPENDIX A.

ECONOMIC LITERATURE TRACKING

Updated April 13, 2009

- Summer 2008, Global Insight: “The Montana economy has benefited from high prices for its energy resources and agricultural commodities.” “In the near term, national economic issues (the housing crisis and reduced consumer spending) will cause growth to slow.” “Over the longer term, lack of economic diversity and an aging population will remain key challenges.”
- Fall 2008, Global Insight: “The U.S. economy was already heading into at least a mild recession as the summer ended. It is now clear that we are heading into a deep recession, comparable to that of 1980-82.”
- October 2008, Energy Information Administration: “Oil markets are expected to remain tight over the next 6 months because of sluggish production growth, which will help push WTI crude oil prices to \$120 per barrel by April 2009, before declining to \$106 per barrel by years’ end.”
- November 2008, Global Insight: “The recession is deepening. The economy [will] contract 1.0% in 2009.” “The worst recession since 1982.”
- December 2008, Global Insight: “The recession continues to deepen. The economy [will] contract 1.8% in 2009.” “After the dismal November employment report, we have raised the probability of our pessimistic scenario from 25% to 40%. It incorporates by far the worst recession in the postwar era.” “Global economy in free-fall.” “Commodity prices are diving.”
- December 1, 2008, Billings Gazette: “Helena employers slow to add seasonal help.”
- December 3, 2008, Global Insight: “We are 12 months into this recession and the economy’s rate of decline has worsened dramatically. We expect real GDP to drop 5.0% in the fourth quarter.”
- December 3, 2008, Helena Independent Record: “Montanans among least delinquent in mortgages”, but “increased in the third quarter”.
- December 4, 2008, Billings Gazette: “65-plus population to double by 2030.” “State and local governments will face challenges as the state’s population ages over the next two decades.”
- December 4, 2008, Billings Gazette: “A natural gas producer [Omimex Canada] with several properties in north-central Montana has won a property tax case before the state Supreme Court.”
- December 5, 2008, Helena Independent Record: “An economic stimulus package proposed in Washington, D.C., would be good for Montana and the City of Helena.”
- December 5, 2008, Global Insight: “Payroll employment fell 533,000 in November – the steepest decline in 34 years. The economy is in free fall.”
- December 5, 2008, Billings Gazette: “The global recession has already smacked Montana, although the state should fare better than the nation,” “We will outperform the United States, but the bad news is we’re still going to feel a lot of pain.”

- December 8, 2008, Billings Gazette: “Gasoline use dropped slightly in Montana for the 12 months ending in June. That means a loss of around \$600,000 in gas tax collections.”
- December 10, 2008, Billings Gazette: “Fiscal analysts reported that the state’s budget picture is getting worse saying projections could drop by at least \$50 million.”
- December 10, 2008, Helena Independent Record: “Semitool, Inc. said it would effectively shut down for three weeks and cut back to a skeleton production crew because of lagging customer orders.”
- December 11, 2008, Global Insight: “The macroeconomic outlook has grown darker in December.” “Expects real GDP to decline in four consecutive quarters.” “Employment will climb to 8.7% in early 2010.”
- December 11, 2008, Billings Gazette: “Stillwater Mining Company’s East Boulder mine is back in operation, with its staff cut in half and its production targets shaved by a third.”
- December 12, 2008, Missoulian: “Semitool., which laid off 100 workers in early November, announced the temporary closure citing poor market conditions and a drop-off in customer orders.”
- December 12, 2008, Billings Gazette: “Facing more grim national economic forecasts, Governor Brian Schweitzer is rewriting his budget proposal for the 2009 Legislature.”
- December 15, 2008, Billings Gazette: “Managers at Troy Mine are preparing for a complete shutdown, as profits disappear amid plunging metals prices.” “Mine ownership issued a 60-day warning to employees, saying that if market conditions do not improve, the mine will close on February 12, 2009.”
- December 16, 2008, Billings Gazette: “The legislature and the state have made a “good-faith attempt” to tackle glaring shortfalls in public school funding existing four years ago, a state judge said.” But “if the state backs away from its commitment of the past four years to bolster state funding of schools, his decision could be reversed in the future.”
- December 16, 2008, Billings Gazette: “Governor Brian Schweitzer issued a revised state budget that cuts general fund spending by \$144 million over the next three years from what he recommended in November.”
- December 16, 2008, Billings Gazette: “A major Flathead Valley contractor [Goose Bay Equipment] will lay off its 58 employees and close in mid-February because of the faltering economy.”
- December 18, 2008, Billings Gazette: “A spokesman for the exclusive Yellowstone Club said that a dozen people who worked in construction and operations-related jobs were load off this week.”
- December 18, 2008, Great Falls Tribune: “The economic downturn will continue in 2009 in the Upper Plains, with unemployment rates rising and recovery in the residential real estate market expected to take more than a year, the Federal Reserve Bank of Minneapolis said.”
- December 22, 2008, Billings Gazette: “Montana’s unemployment rate rose slightly to 4.9 percent in November but is still below the national average of 6.7 percent.”
- December 23, 2008, Associated Press: “The Commerce Department reported that the gross domestic product declined at an annual rate of 0.5 percent in the July-September quarter, while corporate profits fell 1.2 percent.”

- December 25, 2008, Great Falls Tribune: “The Montana Public Service Commission will seek fines of more than \$750,000 against Northwestern Corp., alleging the company violated terms of a 2004 bankruptcy stipulation.”
- December 26, 2008, Billings Gazette: “The Columbia Falls Aluminum Company gave employees 60 days notice that the plant will be shut down, eliminating about 200 jobs, the Flathead Beacon reported.” In July, Columbia Falls Aluminum Company shut down one of its pot lines and laid off 125 employees.”
- January 2009, IHS Global Insight: “U.S. and global economies are in steep decline, in what is the most severe synchronized global Downturn of recent times.” “We are not looking for signs of recovery yet, merely for signs that the rate of decline is becoming less severe – but cannot find them.”
- January 2009, IHS Global Insight: “The U.S. and world economies are about to suffer through some of the worst recessions in the postwar period. Most measures of economic and financial activity look like they fell off a cliff in September and October, and have been deteriorating at an alarming rate ever since.”
- January 6, 2009, CNNMoney.com: “The U.S. economy is likely to deteriorate further this year and unemployment will rise into 2010, according to the latest forecasts of the Federal Reserve.” “The central bank is now predicting that gross domestic product will fall in 2009.” “Employers cut 1.9 million jobs over the first 11 months of 2008, which took the unemployment rate up to 6.7%.”
- January 6, 2009, Western Wood Products Association: “Western mills are experiencing the largest downturn in lumber demand ever recorded. The downward trend is forecast to continue through 2009 before beginning recovery in 2010.”
- January 8, 2009, Billings Gazette: “Peabody Energy said it will slow coal production at its Powder River Basin mines in Wyoming this year in response to the global economic recession.” “It plans to reduce production in the northeastern Wyoming coal reserve by about 10 million tons.”
- January 9, 2009, Billings Gazette: “Plum Creek Timber Company said it will close a sawmill, idle three others and reduce production at a fiberboard plant in Montana in response to the weak housing market and less demand for wood products. The company said the moves would eliminate 145 jobs.”
- January 9, 2009, Helena Independent Record: “Semitool announced the layoffs of 280 employees, including about 200 in the Kalispell and Libby offices.” “Last November, Semitool laid off about 100 workers at its plants in Kalispell and Libby.”
- January 9, 2009, Daily Inter Lake: “Plum Creek Timber Company is telling logging contractors to stop work in the woods.” “Over 50 percent of the contracting work force will be impacted temporarily.”
- January 12, 2009, CNNMoney.com: “Amid all the anticipation of Obama’s stimulus package, Americans should realize that its effects aren’t likely to be felt until the economy is already rebounding on its own.”
- January 13, 2009, Billings Gazette: “The Billings Gazette announced it has laid off four full-time and four part-time employees as part of a work force reduction.” “The slowdown in the local and national economies prompted the decision to reduce expenses.”
- January 14, 2009, Billings Gazette: “American Crystal Sugar announce in 2008 that it would have to shut its Sidney refinery down if area farmers didn’t produce more beets.

The factory was short several thousand acres last year as farmers opted for more lucrative crops such as wheat.”

- January 14, 2009, IHS Global Insight: “The American Economic Association held its annual convention on January 3-5 and a number of top economists weighed in on the financial crisis. For the most part, the research presented was sobering.”
- January 15, 2008, Helena Independent Record: “USA Today publisher Gannett Company imposed one-week unpaid furloughs for most of its U.S. employees saying the move could help minimize the need for further layoffs amid a severe advertising downturn.” “Gannett owns the Great Falls Tribune.”
- January 15, 2009, Billings Gazette: In Wyoming, “The state’s Consensus Revenue Estimating Group last week sharply reduced its projection of how much the state will have to spend in the coming fiscal year. The revised report cut the group’s October projection of \$900 million to just under \$260 million. That money is in addition to the \$8 billion, two-year state budget approved early last year.”
- January 20, 2009, The New York Times: Concerning the economic stimulus - “House plans for infrastructure disappoints advocates for major projects” “As the details of the plan come into focus, big transformative building projects seem unlikely.”
- January 21, 2009, Billings Gazette: “Managers at F.H. Stoltze Land and Timber Company said they plan to temporary shut down the company’s Columbia Falls sawmill amid a national housing slump. The closure, which will begin February 2 and last at least six weeks, is expected to put about 50 employees out of work.”
- January 23, 2009, Associated Press: “Crude prices continue to fall this year as a recession spreads across the globe, forcing oil and gas producers to cut costs.” “Companies throughout the oil industry – producers, service providers, drillers and others – are expected to post mostly lower results for the final three months of 2008 because of the collapse of oil prices.” “In the wake of crude’s plunge and amid a painful recession, oil and gas companies have scrapped exploration and production projects and slashed capital spending for 2009. That reduces work for companies which provide clients a variety of well-site services such as seismic tests, directional drilling and reservoir management.”
- January 23, 2000, CNN Money – “Congress is racing to pass a giant bill to stimulate the economy. But a key piece of it may be a little slower in coming than many people expect. The biggest single tax break in the Democrats’ proposed economic recovery package is the \$145 billion “Make Work Pay Credit.” “But as things currently stand, workers may not see that money until June.”
- January 23, 2009, IHS Global Insight – “A number of key reports next week will confirm pretty much what we already know – the U.S. recession, which commenced back in December 2007, entered a more negative and pernicious phase in the fourth quarter of 2008. This will be reflected in sharp drops in December home sales and durable goods orders, and the icing on the cake will be the fourth-quarter 2008 real GDP report, which will show that output declined 5.8%, a very sharp drop the likes of which we have not seen since 1982.”
- January 26, 2009, Unknown – “The stimulus bill currently steaming through Congress looks like a legislative freight train, but given last week’s analysis by the Congressional Budget Office, it is more accurate to think of it as a time machine. That may be the only way to explain how spending on public works in 2011 and beyond will help the economy

today.” “...a mere \$26 billion of the House stimulus bill’s \$355 billion in new spending would actually be spent in the current fiscal year, and just \$110 billion would be spent by the end of 2010. This is highly embarrassing given that Congress’s justification for passing this bill so urgently is to help the economy right now, if not sooner.”

- January 26, 2009, IHS Global Insight – “The fiscal-stimulus plan now being considered by Congress is one of the main hopes for the economy’s future. Fiscal stimulus on its own will not heal the economy – the financial system must be nursed back to health, and that will likely require hundreds of billions of dollars more in public funds than have already been committed – but it is a key element in any recovery plan.”
- January 27, 2009, Billings Gazette – “In their memo, Bales and Sesso noted that the reduced revenue estimates, which were lowered Friday by \$85 million more for the three years, confirmed their fears. They warned that the estimates might be cut again.” “Terry Johnson...earlier trimmed the projected revenues by \$135 million in December”
- January 27, 2009, Billings Gazette – “The Montana Standard has laid off two full-time and four part-time employees...” “The Independent Record recently announced two layoffs...”
- January 28, 2009, Billings Gazette – “Montana’s unemployment rate rose to 5.4 percent in December, up from 4.9 percent in November.”
- January 28, 2009, Billings Gazette – “The Missoulian laid off four employees and two others were told their jobs will end Feb. 13 as part of a work force reduction.”
- January 30, 2009, Billings Gazette – “The Gazette State Bureau asked Terry Johnson, the chief revenue forecaster for the non-partisan Legislative Fiscal Division, whether he would categorize the Schweitzer-Vann Dyk proposal as a tax. “Yes”, Johnson said. “For starters, you have an existing production tax, and it’s an additional tax.”
- January 30, 2009, Billings Gazette – “A spokeswoman for [Cabelas’s] who is opening its first Montana location this spring says more than 200 employees will be hired in coming months.”
- January 30, 2009, Helena Independent Record – “The Starbucks Corp. announcement Wednesday that it would slash 6,700 jobs and close 300 stores will affect Montana.” “We do know our Montana stores will be impacted.”
- February 2, 2009, CNN Money – “Oil fell below \$41 on Monday as a deepening U.S. recession shrank demand in the world’s top fuel burner and evidence mounted of global downturn.”
- February 2, 2009, CNN Money – “Slim chance of a turnaround in 2009’ “Consumers and businesses have retrenched so deeply that it will take a long time for the economy to stage a meaningful comeback.”
- February 3, 2009, CNN Money – “Oil prices rose as signs of OPEC production cuts began to emerge. But gains were tempered as the group fell short of its pledge and the economy continued to show weakness.”
- February 3, 2009, Helena Independent Record – “82 employees are off the payroll at Montana Tunnels Mine in Jefferson City at the end of the day on Tuesday...”
- February 4, 2009, Billings Gazette – “An Australian company is proposing a \$375 million coal plant in southeastern Montana that would produce high-efficiency coal and synthetic crude oil.” “We can take coal worth \$10 a ton and make it worth \$200 a ton.”
- February 4, 2009, Billings Gazette – “The Montana Tunnels metal mine ... laid off 88 workers Tuesday, following through on 60-day layoff notices issued in early December.”

“That will keep 104 people working, but it is likely they soon will get the 60-day notices...”

- February 4, 2009, Senator Tester’s website – “The U.S. Senate version of the Jobs Bill will help rebuild the struggling economy by investing more than \$687 million in Montana.”
- February 4, 2009, IHS Global Insight – “Oil inventories climbed once again, with total stocks up 1.4 million barrels and crude up by 7.2 million barrels. Crude imports remained high. Initial reaction on the futures market to the report was negative, but prices firmed after it had been absorbed.”
- February 5, 2007, Office of the House Republican Leadership – “Republicans urge swift agreement on revenue estimates”, “Republicans on the House taxation Committee called on Governor Brian Schweitzer to take swift action to bring his office’s budget estimate into line with that of Montana’s award-winning, non-artisan Legislative Fiscal Division.”
- February 6, 2009, Billings Gazette – “Republicans and Democrats can’t even agree on how much money the state will have for its budget, setting up far bigger battles with lawmakers actually start deciding how to spend it.”
- February 6, 2009, Billings Gazette – “Oil prices dropped below \$40 as the government reported U.S. employers slashed more than a half million jobs last month, the most in 35 years.” “The unemployment rate rose to 7.6 percent, the highest since 1992.” “Oil prices won’t likely fall much below \$40 a barrel and should trading in the \$50s by the end of the year.” “In the second half, the economy should be turning around and commodities should start to improve.”
- February 6, 2009, Billings Gazette – “Holy Rosary Healthcare in Miles City has laid off nine people, 2 percent of its work force.” “St. James Laid off 23 employees, or about 4 percent of its work force, in December.”
- February 6, 2009, Billings Gazette – “recession-battered employers eliminated 598,000 jobs in January the most since the end of 1974, and catapulted the unemployment rate to 7.6 percent. The grim figures were further proof that the nation’s job climate is deteriorating at an alarming clip with no end in sight.”
- February 6, 2009, IHS Global Insight – “January’s payroll loss of 598,000 jobs exceeded most expectations. The labor market is in free-fall and has been so since November.” “Job losses are deep and broad.”
- February 6, 2009, Billings Gazette – “In an uncertain reach across party lines, Senate moderates struggled for a compromise on economic stimulus legislation as the government spit out grim new jobless figures and President Barack Obama warned of more bad news ahead.” “His [President Obama] warnings have become increasingly dire..”
- February 7, 2009, CNN Money – “Legislators from both sides of the aisle reach decision on a \$780 billion stimulus; vote could come [February 10th]. However, there were strong opinions on both sides of the debate.”
- February 2009, NCSL State Legislatures – “Rising unemployment, dropping income tax revenue, the ongoing foreclosure debacle and a deep crisis in consumer confidence leave states facing the worst fiscal crisis in more than 50 year.” “A survey [of 26 states]... came up with sobering figures that could easily worsen as the recession continues to unfold.” “On the spending side, states face grim choices.” “...that the numbers look so

bad at this point is a harbinger of an even worse recession.” “Based on my analysis of the last several downturns ... this one is likely to be worse than the previous ones”.

- February 9, 2009, CNN Money – “In the coming days, a compromise version of the economic recovery plan is likely to pass the Senate with a handful of Republican votes. But a final bill is still a ways off.”
- February 10, 2009, IHS Global Insight – “The U.S. Treasury secretary outlines a general plan for stabilizing the financial system. The details are too scarce on some key elements, though, and markets render a negative verdict.”
- February 10, 2009, IHS Global Insight – “President Obama has inherited an economy contracting more sharply than at any time since the winter of 1981-82. Real GDP declined 3.8% in the fourth quarter of 2008 (a decline likely to be magnified after revisions), and we expect further steep declines in the first half of 2009.”
- February 11, 2009, Billings Gazette – “the governor [of Wyoming] intends to ask the state’s Consensus Revenue Estimating Group to hold a special meeting this spring to develop new state revenue projections”. “The House and Senate appropriations committees are warning state lawmakers to save as much money as possible to try to avoid program cuts in the coming year”. “Freudenthal will direct state agencies to make specific plans for cutting their general fund spending by 5 percent in the coming fiscal year”. “the governor will also direct them to identify how they could make 10 percent cuts”. “Indicator after indicator suggests that we’re heading for a very tough time in the state.” “Wyoming has received a range of bad economic news recently...that includes falling energy prices, stagnant numbers of rigs drilling for minerals, more new applications for unemployment and lower use tax collections”. “The bottom line is that the national recession and global economic retraction is already impacting the state. In the next several months, the impact will also become noticeable in the state’s employment and consumer/business spending numbers”
- February 12, 2009, Billings Gazette – “Three people in the city’s Building Division were notified that their last day of work is May 29”.
- February 13, 2009, Billings Gazette – “A shortage of money forced the Crow Tribe to layoff 180 seasonal workers.”
- February 16, 2009, Helena Independent Record – “Terry Johnson, the legislature’s chief revenue forecaster, has chopped revenue estimates by a total of \$251 million from what a panel recommended last fall.” “about what we expected” “unfortunate” “I was anticipating the worst” “it’s going lower” “I think the trend line’s bad” “Dave Ewer said he found no major discrepancies in Johnson’s revenue reductions.”
- February 17, 2009, Billings Gazette – “Some of Montana’s unemployed qualify for a second tier of benefits under a package taking effect this week. Montana is one of 33 states where rising loss of work has triggered an additional level of emergency unemployment compensation.”
- February 18, 2009, Billings Gazette – “Montana’s gambling economy is now cooling down as the recession sets in...” “We are seeing some declines in anything that is consumption-driven but is discretionary, said Terry Johnson, chief revenue forecaster for the Montana Legislature.”
- February 19, 2009, Billings Gazette – “They [House Taxation Committee] approved chopping by \$251 million the revenue estimated adopted by an interim legislative committee in mid-November...” “The key to unlocking the committee deadlock appeared

to be a written agreement signed earlier by House Speaker Bob Bergren and House Minority Leader Scott Sales. In essence, they agreed to go along with Johnson's recommended revenue estimates, whichever direction they go."

- February 24, 2009, Helena Independent Record – "The cell phone options for Montana callers were reduced by one over the weekend, when Airtel Wireless abruptly closed its stores across the state."
- February 24, 2009, CNN Money – "Federal Reserve Chairman Ben Bernanke said he's hoping the recession could end later this year, but he cautioned that a full economic recovery will take "more than two or three years."
- February 26, 2009, IHS Global Insight – "The stimulus plan in our February forecast, which is slightly larger than the plan that finally became law, has an overall impact similar to the plan we assumed in January. It takes about one percentage point off the peak unemployment rate, and raises the floor for employment by about two million."
- March 2009, IHS Global Insight – "As the worst recession in the postwar era, the present downturn is now severe enough to warrant the description "great". We expect the fourth and first quarters to show back-to-back declines in real GDP of more than 6% at an annual rate. We expect real GDP to fall 3.7% in 2009 and the unemployment rate to peak at 10.3% in the first half of 2010."
- March 4, 2009, Billings Gazette – "Twenty-nine people laid off at a Pablo sawmill have been cleared to apply for extended unemployment benefits through a program assisting workers displaced by international trade. Plum Creek Co. announced in January that operation of its Pablo sawmill would drop to one shift."
- March 3, 2009, IHS Global Insight – "In 2008, most states benefited from the U.S. export boom, but the annual figures mask deceleration in the final two quarters of the year."
- March 4, 2009, Billings Gazette – "There was no shortage of ideas pitched for spending stimulus money, as state senators began looking at the federal package aimed at spurring the economy." "The Montana Department of Revenue said that proposed tax relief in the federal package will result in about \$525 million in tax reductions for Montana residents and businesses."
- March 4, 2009, CNN Money – "Independent financial advisors see a light – however dim – at the end of the current recession tunnel, according to a new survey. In an online study conducted for Charles Schwab, 85% of advisors believe the downturn will end within the next two years. Fifteen percent see it going longer."
- March 5 2009, CNN Money – "It's no secret the job market is bad. The Labor Department will release its latest jobs report Friday. Economists surveyed by Briefing.com forecast that the unemployment rate rose to 7.09% in February and that 650,000 jobs were lost. Still, as bad as those numbers are, some have argued that this jobs downturn is not as bad as the early 1980s. The unemployment rate peaked at 10.8% in late 1982."
- March 6, 2009, CNN Money – The U.S. economy continued to hemorrhage jobs in February, bringing total job losses over the last six months to more than 3.3 million, and taking the unemployment rate to its highest level in 25 years. The unemployment rate rose to 8.1% from 7.6% in January. It was the highest reading since December 1983 and higher than economists' projections of 7.9%." "The survey of households found 1.5 million people are now unemployed, the most since records started being kept in 1940."

- March 6, 2009, IHS Global Insight – [a chart showing percent change in employment 2008Q4 – 2009Q4. Montana’s job losses were -0.7% to 0.0%.]
- March 6, 2009, AP Associated Press – “The nation’s unemployment rate bolted to 8.1 percent in February, the highest since late 1983, as cost-cutting employers slashed 651,000 jobs amid a deepening recession.” “There is no light at the end of the tunnel with these numbers,” said Nigel Gault, economist at IHS Global Insight. “Job losses were everywhere and there’s no hope for a turnaround any time soon.””
- March 12, 2009, Helena Independent Record – “Plum Creek Timber Co. has begun shutting down the last major sawmill in the Tobacco Valley, a swath of northwestern Montana that was dotted with mills during much of the 20th century. The Seattle-based company said the sawmill at Fortine, about 20 miles from the Montana-British Columbia border, was cutting its final log on Thursday, planning will end later this month and the mill will be disassembled in April, ending 72 jobs and 53 years of operation.”
- March 17, 2009, Billings Gazette – “Outdoors outfitter Cabela’s will open its new Billings store – its first in Montana.”
- March 20, 2009, Billings Gazette – “Another Columbia Falls lumber mill plans to resume operations after a layoff. Officials with F.H. Stoltze Land & Lumber Co. plan to restart its sawmill next Monday, after a seven-week shutdown. When the mill gets to full production, 60 to 70 people will be back to work.” “On Monday, Plum Creek Timber co. restarted its sawmill in Columbia Falls, putting 130 people back to work.”
- March 23, 2009, Billings Gazette – “The shutdown at the Rosebud Mine near Colstrip continued Sunday after members of the International Union of Operating Engineers Local 400 were locked out Friday after rejecting a new contract offer from Western Energy Co., the owner of the Rosebud Mine and a subsidiary of Westmoreland Coal Co.”
- March 25, 2009, CNN Money – “Economists generally agree this is the worst economic downturn since the Great Depression, but they say despite pain, another depression isn’t likely.”
- March 26, 2009, Associated Press – The economy shrank at a 6.3 percent pace at the end of 2008, the worst showing in a quarter-century, and probably isn’t doing much better now. The Commerce Department on Thursday reported that the economy was sinking a bit faster than the 6.2 percent annualized drop for the October-December quarter estimated a month ago. New claims for unemployment benefits last week rose to a seasonally adjusted 652,000 from the previous weeks’ revised figure of 644,000. The number of people claiming benefits jumped to 5.56 million, higher than economists’ projections of 5.48 million, and a ninth straight record-high.”
- March 26, 2009, Associated Press – “Officials with Semitool Inc. have notified all 520 of the company’s Montana employees of possible layoffs, beginning as early as May 8. Semitool laid off 100 workers in Kalispell and Libby on Nov. 10 and 200 more on Jan. 8.”
- March 27, 2009, Billings Gazette – “Because of the economic downturn and shrinking demand for cardboard projects, Smurfit-Stone Container Corp.s’ Frenchtown linerboard plant will shut down operations for 10 days in April. The shutdown will begin April 20. If all goes according to plan, the mill will be back in business on May 1, including the re-start of the No. 2 papermaking machine.”
- March, Global Insight U.S. Executive Summary – “The recession continues to deepen. We expect real GDP to decline sharply at least through mid-2009, with a first-quarter

decline of 6.8%. The economy contracts 3.7% in 2009 and the unemployment rate reaches 10% by the end of the year.” “Inflation is yesterday’s problem; deflation is the threat now. We expect headline CPI inflation to be well into negative territory by mid-2009.” “Fiscal stimulus prevents an even deeper recession, but the \$787-billion package now looks too small relative to the severity of the downturn.”

- March 30, 2009, Global Insight – “A string of six positive housing reports has arrived over the past two weeks, raising hopes that a turnaround is at hand. The key statistic, February’s increase in single-family permits, is a solid number that may eventually mark the turnaround in the worst housing market in U.S. history. But we need two more months of additional data before making this call.”
- March 31, 2009, Global Insight – “Chrysler and General Motors now have a brief period in which to restructure even further if they wish to receive additional federal taxpayer money, but bankruptcy is almost certainly part of the picture.”
- March 31, 2009, Global Insight – “In the fourth quarter of 2008, 41 of 50 states experienced declines in personal income, largely a result of falling wage disbursements, which make up 65% of income. Overall, 38 states experienced a fourth-quarter decline in disbursements as employment losses mounted.” [A table shows Montana had an increase of 0.6% in wages and a negative 0.1% in personal income]
- April 1, 2009, Billings Gazette – “The Schweitzer administration said Tuesday that it’s holding firm on setting aside a sizable state-budget cushion – and a leading senator said that means lawmakers must act to trim spending somewhere in the proposed budget.
- April 2, 2009, Global Insight – “Although we still expect the fourth and first quarters to show back-to-back declines in real GDP of more than 6% (annual rates), signs are accumulating (especially in consumption and housing) that the worst is now behind us. This does not mean that we think the economy is now ready to grow again – we expect GDP to bottom out only in the second half of the year. Nor does it mean that the labor market is ready to turn – we still expect the unemployment rate to reach 10% before it peaks. But it does mean that there is now some solid evidence that the period of economic free-fall is behind us. That the next step will be a slower rate of decline, to be followed by a bottoming out in the second half of the year, and recovery gathering pace in 2010. We still expect a severe 3.5% decline for GDP this year, though, followed by a 1.4% rebound in 2010.”
