MONTANA'S OIL AND GAS PRODUCTION TAX

The oil and natural gas production tax is imposed on the production of petroleum and natural gas in Montana. The tax has numerous different rates depending on several factors like whether oil or gas is produced from a stripper well or a well drilled after 1999. The current oil production tax rates and the natural gas tax rates are found in the tables below.

History of the Production Tax

- FY 1981 increased oil severance tax on the gross value of the oil and gas product
- FY 1984 the Board of Oil and Gas Conservation was re-established to monitor oil and gas operations in Montana
- 1993 Special Legislative Session enacted an 18 month net proceeds tax holiday on horizontally drilled oil wells for working interests only
- FY 1996 severance taxes replaced with new production taxes changing the tax from a property tax levied by state and local governments to a state tax shared with local governments
- Transportation costs to market reduce the price Montana receives for a barrel of oil. Revenue forecasts for oil and gas estimate this differential to get a more accurate estimate.
