

GENERAL FUND REVENUE UPDATE FISCAL 2010

A Report Prepared for the
Revenue and Transportation Interim Committee
Legislative Finance Committee

By
Terry W. Johnson
Principal Fiscal Analyst

August 3, 2009

Legislative Fiscal Division

www.leg.mt.gov/csa/fiscal

INTRODUCTION

The purpose of this report is to provide the committees with general fund revenue collection data through July FY 2009 compared to July FY 2010. This and future updates are intended to provide the most recent information on general fund revenue collections as we proceed through the 2011 biennium. These reports, for most of the time, will only highlight the significant revenue sources with a brief explanation of what trends may be developing.

As a reminder, during the regular legislative session, our office recommended to the 61st Legislature that the general fund revenue estimates be decreased by \$292.6 million for fiscal 2009, 2010, and 2011. The House Taxation Committee adopted these recommendations and included the assumptions in HJ 2, the revenue estimating resolution. The reduced revenue was anticipated from major sources such as individual and corporation income taxes and oil and gas production taxes. The revenue estimates used by the legislature for the 2011 biennium have been incorporated into this report.

GENERAL FUND REVENUE UPDATE

FISCAL 2010 REVENUE COLLECTIONS

Based on information recorded on the Statewide Accounting, Budgeting, and Human Resource System (SABHRS), total general fund receipts through July for FY 2010 were \$89.4 million as shown in Figure 1. This compares to \$95.6 million collected through July for FY 2009. This is a decline in collections from FY 2009 of \$6.2 million or a 6.5 percent decrease. To be on target with the estimates used by the 61st Legislature, collections should have been down by only 1.9 percent or \$1.9 million.

Total general fund collections as estimated by the legislature were expected to be \$35.1 million (1.9 percent) below the FY 2009 actual collections. These estimates were used by the 61st Legislature and contained in the adjusted HJ 2 (revenue estimate resolution plus impacts of enacted legislation). Most of this reduction was expected from corporate income tax, oil and gas production tax, and TCA (treasury cash account) investment earnings. Corporation income tax collections were expected to decline because of the economic recession impacts on corporate profits. Oil and gas production collections were expected to decline because of significantly reduced commodity prices and reduced production levels. TCA investments earnings were expected to decline because of the historical low level for short-term interest rates.

Figure 1 shows revenue collection and estimate data by major revenue category. The last three columns in the figure show how collections from the revenue source compare to the estimate contained in HJ 2. For example, corporation income tax (10th line) shows a negative \$3.3 million in the "Difference" column. This means collections through July of this year are \$3.3 less than the amount received through July of FY 2009 for a 58.2 percent difference shown in the "% Change" column. The legislature assumed collections would be down by 30.5 percent shown in the last column. This means collections will need to accelerate in subsequent months otherwise receipts will be less than anticipated by the legislature.

* plus impacts of enacted legislation

DISCUSSION OF SELECTED SOURCES FOR FISCAL 2010

The following section of the report addresses some of the key general fund revenue sources that were monitored closely during the regular session. These sources are individual income tax, corporation income tax, and video gaming tax. These sources were chosen because of their vulnerability to the economic recession and the discussion these sources received during the past legislative session.

Individual Income Tax

Based on July accounting data, net individual income tax collections for FY 2010 (gross collections less refunds) were 11.9 percent below net collections for FY 2009 or a decrease of \$7.2 million. The 61st Legislature assumed that revenues would increase by 3.1 percent from the FY 2009 amount or an increase of \$25.1 million. This increase was anticipated because collections received in FY 2009 were below the HJ 2 estimate.

Figure 2 shows the July accounting details of individual income tax collections of FY 2010 compared to the same period for FY 2009. Since withholding tax collections are a proxy of total wage growth, the negative 4.2 percent growth from last year indicates total wages have declined from the level observed a year ago. Withholding payments

for mineral royalties have declined by \$3.7 million or 64.3 percent. This decline was anticipated because of the significant reduction in Montana's wellhead oil price.

Figure 2

Individual Income Tax Comparison				
Revenue Code & Description	Through 7/31/2008	Through 7/31/2009	Difference	Percent Change
	Fiscal 2009	Fiscal 2010		
510101 Withholding Tax	54,011,581.75	51,720,604.64	(2,290,977.11)	-4.24%
510482 Mineral Royalty WH Tax	5,717,025.50	2,040,779.59	(3,676,245.91)	-64.30%
510102 Estimated Tax	4,598,588.92	3,398,894.30	(1,199,694.62)	-26.09%
510103 Current Year I/T	3,321,713.04	3,627,738.11	306,025.07	9.21%
510105 Income Tax - Audit Collections	0.00	0.00	0.00	
510106 Income Tax Refunds	(6,784,965.21)	(7,141,539.28)	(356,574.07)	5.26%
Totals	\$60,863,944.00	\$53,646,477.36	(\$7,217,466.64)	-11.86%
Percent of Actual/Estimated	7.02%	6.38%		

Estimated payments were \$1.2 million (26.0 percent) below last year. Since the first estimated payment for the fiscal year is not due until September 15, current collections are of little value at this time. The same can be said for current year payments.

Refunds issued between now and the end of October will be monitored closely. If refunds during this period are unusually high, this will indicate taxpayers overpaid during FY 2009 thereby inflating actual receipts for FY 2009. Conversely, if refunds are unusually low, taxpayers underpaid during FY 2009 which would mean FY 2009 receipts were understated.

When all of the accounting categories are added together, total individual income tax collections through July are \$7.2 million below FY 2009 amounts. Since total FY 2010 collections were estimated to be \$25.1 million above FY 2009 amounts, the HJ 2 individual income tax estimate for FY 2010 may be too high. Since there is only one month of accounting information available, it would be premature to speculate on how much the estimate could be off from the HJ 2 estimate.

Corporation Income Tax

Based on July accounting data, net corporation income tax collections for FY 2010 (gross collections less refunds) were 58.2 percent below net collections for FY 2009 or a decrease of \$3.3 million. The 61st Legislature assumed that revenues would decrease by 30.5 percent from the FY 2009 amount or a decrease of \$50.7 million. This decrease was anticipated because collections received in FY 2009 were above the HJ 2 estimate.

As pointed out in the July report, part of the strength in FY 2009 collections was explained by the auditing efforts of the DOR and the resulting unusual high audit collections. Total audit collections were \$31.0 million in FY 2009 compared to \$16.9 million in FY 2008. When audit collections are removed from FY 2008 and 2009 totals, then the trend for the remaining collections are a negative 5.7 percent, a decline rate greater than estimated in HJ 2.

As with individual income tax collections, the first estimated payment for the fiscal year is not due until September 15. This payment schedule makes current estimated payment collections of little value at this time. The same can be said for current year payments.

Figure 3

Corporation Income Tax Comparison				
Revenue Code & Description	Through 7/31/2008 Fiscal 2009	Through 07/31/09 Fiscal 2010	Difference	Percent Change
510501 Corporation Tax	3,639,936.84	1,187,233.18	(2,452,703.66)	-67.38%
510505 Corporation Tax Estimated Paym	2,445,951.97	2,387,542.00	(58,409.97)	-2.39%
510502 Corporation Tax Refunds	(467,973.00)	(1,226,220.54)	(758,247.54)	162.03%
510503 Corporation Tax-Audit Collect.	<u>0.00</u>	<u>0.00</u>	<u>0.00</u>	
Totals	\$5,617,915.81	\$2,348,554.64	(\$3,269,361.17)	-58.20%
Percent of Actual/Estimated	3.50%	2.03%		

When all of the accounting categories are added together, total corporation income tax collections through July are \$3.3 million below FY 2009 amounts (58.2 percent). Since total FY 2010 collections were estimated to be \$50.7 million (30.5 percent) below FY 2009 amounts, the HJ 2 corporation income tax estimate for FY 2010 may be too high. Since there is only one month of accounting information available, it would be premature to speculate on how much the estimate could be off from the HJ 2 estimate.

Video Gaming Tax

Based on July accounting data, video gaming tax collections for FY 2010 were 4.1 percent below collections for FY 2009 or a decrease of \$0.6 million. The 61st Legislature assumed that revenues would increase by 10.5 percent from the FY 2009 amount or an increase of \$6.5 million. This increase was anticipated because collections received in FY 2009 were below the HJ 2 estimate.

As mentioned in the July report, this decrease was noted during the session but it was premature to assess the trend until further collection activity was received. For FY 2009, collections from this source were below estimate by \$4.1 million or 6.2 percent. This trend appears to be continuing into FY 2010 as collections are down 4.1 percent when July's collections of FY 2009 are compared to the same period of FY 2010. Since video gaming tax revenues are based on gross income (defined as net of payouts), reduced tax revenues are due to less machine play. This would indicate that individuals have less to spend or are choosing to spend their disposable income on other items or to save it.

SUMMARY

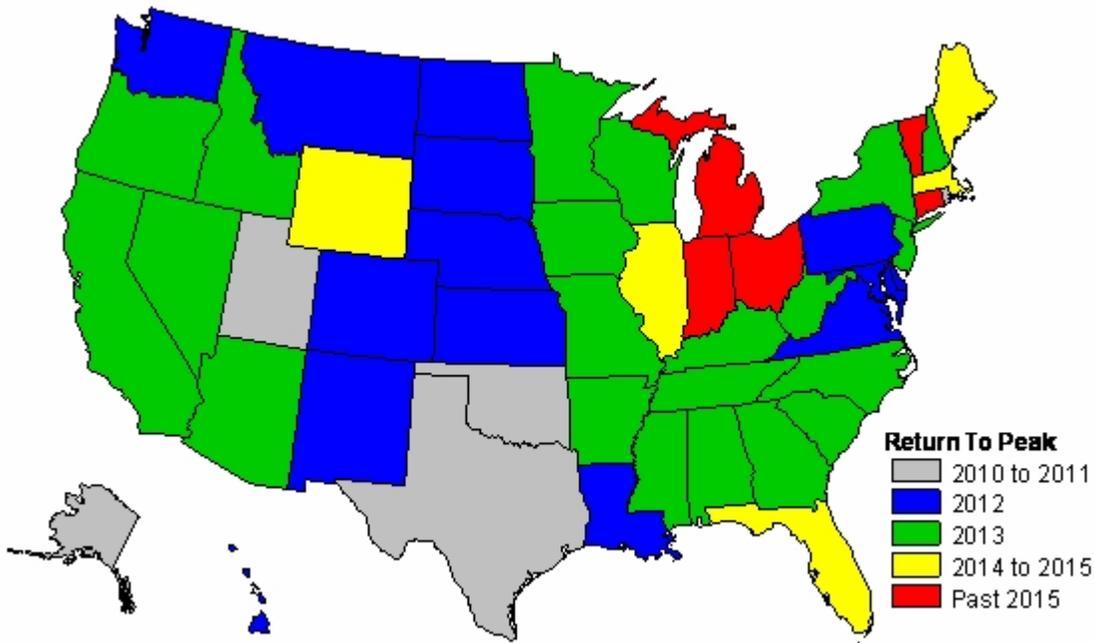

Total general fund revenue collections through July for FY 2010 are below the same period of FY 2009 by \$6.2 million or 6.5 percent. The 61st Legislature assumed revenue would decline by only 1.9 percent from FY 2009 to FY 2010 or \$25.1 million. The focus of this analysis was on individual income tax, corporation income tax, and video gaming tax. These three sources were sources monitored closely during the legislative session. Since individual income tax is the predominate source of revenue in the general fund account, a small percentage change in this source can have a significant impact on total general fund revenues. As detailed in the report, however, collection data for one month of the fiscal year is inadequate to draw any conclusions on the future collection patterns for FY 2010. The information does suggest, however, that close monitoring is imperative to insure that the legislature remains fully informed of any significant revenue trends.

Attached is a graphic showing the anticipated recovery date by state prepared by IHS Global Insight (GI). As you may recall, GI is the national economic forecasting firm the state is on contract with to provide economic forecasts.

Map of the Week

When Will U.S. States Return to Peak Employment Levels?

While a few states will rebound strongly from the current recession over the next two years, most of the country will take longer to return to the peak employment levels achieved in the middle of this decade, before the downturn began to grip their economies.
