1. Wind power is a domestic energy resource that being is developed like other resources, such as coal, natural gas, and oil.
2. Wind energy represents a diverse revenue stream for Montana Ag Producers. This energy can allow families to stay on the land and insure the economics of an operation for generations to come.
4. Wind farms don't belong everywhere the wind blows. View sheds are a cherished part of our states character and should not be sacrificed. The good news is that our state is has plenty of room! Thoughtful wind development in our vast central and eastern parts of the state will be a huge boost to rural communities and rural economies.

Rhyno Stinchfield, CEO
