n. Other: _____		X				

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Water Resources (Attach additional pages of narrative if needed):

3a. Rotenone will be distributed throughout the water column and is lethal to all gill-breathing organisms. Rotenone is a naturally occurring organic compound that interferes with oxygen transfer at the cellular level. Fish will be killed and aquatic invertebrates will be reduced temporarily. Birds, mammals, reptiles, and other species lacking gills are not harmed by the chemical. Rotenone is highly biodegradable and detoxifies rapidly over time and with dilution. No discharge from the reservoir will occur until the water is detoxified.

3f. Well monitoring in both California and Montana have shown that rotenone and other constituents of the formulation do not get into groundwater adjacent to treated lakes.

8a. Rotenone degrades quickly and is registered for use by the U.S. Environmental Protection A. At a treatment rate of 2ppm Noxfish brand formulation, the water will contain 100 ppb(mg/l) rotenone. This is about 3,000 times below the safe level for short term human consumption (300 mg/l) according to Gleason et al (1969). Therefore there is no risk associated with someone accidentally drinking from the reservoir. The safe level for life-long exposure to water containing rotenone is 1.8 mg/l (EPA IRIS database). The water in Faber Reservoir will not likely have a concentration greater than this for more than two months, so there would be no life time risk.

Description and analysis of reasonable alternatives (including the no action alternative) to the proposed action whenever alternatives are reasonably available and prudent to consider and a discussion of how the alternatives would be implemented:

A. No action

Rehabilitate lake to reestablish a productive trout fishery.

C. Biological Control: Introduce predator fishes to reduce sucker population. This has been tried and proved unsuccessful

Alternative B is the most acceptable alternative based on the current state of the fishery and recovery potential. No action would result in maintenance of a low quality fishery. Biological control has been tried with unsatisfactory results.

3. Evaluation and listing of mitigation, stipulation, or other control measures enforceable by the agency or another government agency:

Post signs around lake warning people not to eat fish or drink water.

4. Based on the significance criteria evaluated in this EA, is an EIS required? NO If an EIS is not required, explain why the EA is the appropriate level of analysis for this proposed action:

With low impacts to the environment and/or the public the EA is the appropriate level of analysis.

5. Describe the level of public involvement for this project if any and, given the complexity and the seriousness of the environmental issues associated with the proposed action, is the level of public involvement appropriate under the circumstances?

Public involvement will include notice in local newspapers, State Bulletin Board and distribution of the Draft EA to those involved or interested for a 15 day comment period.

6. Duration of comment period if any:

15 day comment period.

PART III. NARRATIVE EVALUATION AND COMMENT

Faber Reservoir is leased as a Fishing Access Site and has been utilized by the public for over 30 years. Until the illegal sucker introduction it was known as one of the premier trout fisheries in the region. Fishing pressure and trout numbers have dwindled significantly over the last five years. The drought currently being experienced in this area affords an excellent opportunity to assure a total kill of suckers using a minimal amount of toxicant. The landowner, Lawrence Faber, is supportive of this effort. If low water/dry conditions are not encountered by late summer the project may be postponed for one year. Only minor impacts to the environment or the public use of the area have been identified.
