Ladies and Gentlemen:

Montana Fish, Wildlife & Parks has completed an Environmental Assessment (EA) for the Robertson Creek Experimental Cutthroat Trout Population project. The project proposes to move no more than 100 westslope cutthroat trout from Good Creek to Robertson Creek, above the natural barrier near FS Road 60. This will serve to establish a genetically pure population of westslope cutthroat trout that will be safeguarded from invasion by brook and rainbow due to the natural barrier near FS Road 60.

There were no changes to the draft EA; therefore, the draft becomes the final EA. A copy of the Decision Document is enclosed for your information.

Sincerely,

Dan Vincent
Regional Supervisor

DV/nli
Enclosure

Flathead¹³⁰

**ENVIRONMENTAL ASSESSMENT AND DECISION NOTICE
FOR ROBERTSON CREEK EXPERIMENTAL CUTTHROAT TROUT POPULATION**
October 11, 2000

Project proposal:

To introduce an experimental population of genetically pure westslope cutthroat trout into Robertson Creek, which is presently a fishless stream, for the purposes of providing a genetic reserve and expanding a population within its existing range.

Site location and characteristics:

Robertson Creek is located in Flathead County in the Flathead National Forest west of the town of Olney. Its legal description is T32N, R25W, S6 and 31. The creek is approximately 2.5 miles long.

Project justification:

Robertson Creek has been sampled in past years by FWP biologists during fish population monitoring and inventory surveys. Fish have never been documented in the stream. It was discovered that Robertson Creek has a natural barrier near the crossing of forest road 60, which is likely responsible for blocking fish from naturally colonizing it. Two nearby streams, Griffin and Martin creeks, both have natural barriers with populations of genetically pure westslope cutthroat trout above and mixed populations of brook trout and cutthroat below. Given the examples set by these two streams, it is believed that Robertson Creek likewise can provide a population of pure westslope cutthroat trout safe from invasion by brook trout or rainbow. Furthermore, this population may be a source of eggs and sperm for future recovery projects that require cutthroat that display resident life history behavioral characteristics.

Environmental impacts of project:

No adverse effects are expected for plants, adult amphibians, reptiles, birds, wild mammals, or humans.

Social impacts:

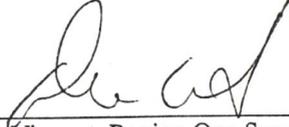

Statewide Angler Pressure estimates for 1999 indicate that Good Creek, the nearest adjacent fishery, received an estimated 68 angler days in 1999. Empirical information exists that indicates the Good Creek watershed receives a higher amount of angling pressure than is reflected in the estimates. Most angling is from the residents in the Good Creek drainage and residents of Olney. Although the introduction of fish in Robertson Creek may provide more angling opportunities, it is not believed to be significant given the small size of Robertson Creek, limited access, and the higher quality opportunities in adjacent fisheries. No harvest restrictions are proposed for the Robertson Creek population at this time.

Public involvement:

In compliance with the Montana Environmental Policy Act, an environmental assessment was prepared and circulated for public comment from September 18 through October 2, 2000. Notices were advertised in the local newspaper, state bulletin board, FWP news release and copies of the EA were made available to the public at local libraries and FWP Region 1 headquarters in Kalispell. Only two comments were received (one by a private citizen and one by Flathead Chapter of Trout Unlimited), and both were in favor of the project.

Decision notice:

Based on the comments and agreements for the value of developing a population of genetically pure westslope cutthroat trout, and to provide a population free from risk of invasion by exotic trouts, I recommend that the proposed project be implemented to fulfill the desired outcome.

10/13/00

Montana Fish, Wildlife & Parks

FINAL

MEPA/NEPA/HB495 GENERIC CHECKLIST

PART I. PROPOSED ACTION DESCRIPTION

1. Type of Proposed State Action: Stocking of a fishless stream with an experimental population of genetically pure westslope cutthroat trout.
2. Agency Authority for the Proposed Action: MT Fish, Wildlife & Parks
3. Name of Project: Robertson Creek Experimental Cutthroat Trout Population
4. Name, Address and Phone Number of Project Sponsor (if other than the agency)
5. If Applicable:

Estimated Construction/Commencement Date: October 1, 2000

Estimated Completion Date: November 30, 2000

Current Status of Project Design (% complete): 60%

6. Location Affected by Proposed Action (county, range and township):

Flathead County, T32N, R25W, S6 & S31 and T31N, R25W, S7
7. Project Size: Estimate the number of acres that would be directly affected that are currently:

- | | |
|---|---|
| <p>(a) Developed:
residential..... <u>0</u> acres
industrial <u>0</u> acres</p> <p>(b) Open Space/Woodlands/
Recreation <u>0</u> acres</p> <p>(c) Wetlands/Riparian
Areas..... <u>0</u> acres</p> | <p>(d) Floodplain..... <u>0</u> acres</p> <p>(e) Productive:
irrigated cropland..... <u>0</u> acres
dry cropland..... <u>0</u> acres
forestry <u>0</u> acres
rangeland <u>0</u> acres
other..... <u>2.5 miles of stream</u></p> |
|---|---|

8. Map/site plan: attach an original 8 1/2" x 11" or larger section of the most recent USGS 7.5' series topographic map showing the location and boundaries of the area that would be affected by the proposed action. A different map scale may be substituted if more appropriate or if required by agency rule. If available, a site plan should also be attached.

9. Narrative Summary of the Proposed Action or Project Including the Benefits and Purpose of the Proposed Action: Pending completion of a successful disease screening and authorization from FWP Fish Health committee, we will move no more than 100 westslope cutthroat trout from Good Creek to Robertson Creek, above the natural barrier near FS Road 60. This will serve to establish a genetically pure population of westslope cutthroat trout that will be safeguarded from invasion by brook and rainbow due to the natural barrier near FS Road 60. This will provide approximately 2.5 miles of cutthroat habitat, previously unavailable to any fish. In the event of a catastrophic failure the first year, the procedure may be repeated once.
10. Listing of any other Local, State or Federal agency that has overlapping or additional jurisdiction.

(a) Permits:

<u>Agency Name</u>	<u>Permit</u>	<u>Date Filed/#</u>

(b) Funding:

<u>Agency Name</u>	<u>Funding Amount</u>

(c) Other Overlapping or Additional Jurisdictional Responsibilities:

<u>Agency Name</u>	<u>Type of Responsibility</u>

USFS - Land Management

11. List of Agencies Consulted During Preparation of the EA:

USFS – Sensitive Plants
 FWP – Sensitive Wildlife

PART II. ENVIRONMENTAL REVIEW

A. Evaluation of the Impacts of the Proposed Action Including Secondary and Cumulative Impacts on the Physical and Human Environment:

PHYSICAL ENVIRONMENT

1. <u>LAND RESOURCES</u> Will the proposed action result in:	IMPACTS				Can Impacts Be Mitigated*	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
a. Soil instability or changes in geologic substructure?		X				
b. Disruption, displacement, erosion, compaction, moisture loss, or over-covering of soil which would reduce productivity or fertility?		X				
c. Destruction, covering or modification of any unique geologic or physical features?		X				
d. Changes in siltation, deposition or erosion patterns that may modify the channel of a river or stream or the bed or shore of a lake?		X				
e. Other: _						

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Land Resources (Attach additional pages of narrative if needed):

PHYSICAL ENVIRONMENT

2. <u>AIR</u> Will the proposed action result in:	IMPACTS				Can Impacts Be Mitigated*	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
a. Emission of air pollutants or deterioration of ambient air quality?		X				
b. Creation of objectionable odors?		X				
c. Alteration of air movement, moisture or temperature patterns, or any change in climate, either locally or regionally?		X				
d. Adverse effects on vegetation, including crops, due to increased emissions of pollutants?		X				
e. Other: _						

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Air Resources (Attach additional pages of narrative if needed):

PHYSICAL ENVIRONMENT (continued)

. <u>WATER</u> Will the proposed action result in:	IMPACTS				Can Impacts Be Mitigated*	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
. Discharge into surface water or any alteration of surface water quality including but not limited to temperature, dissolved oxygen, turbidity or pathogens?		X				
. Changes in drainage patterns or the rate and amount of surface runoff?		X				
. Alteration of the course or magnitude of flood water or other flows?		X				
. Changes in the amount of surface water in any water body or creation of a new water body?		X				
. Exposure of people or property to water related hazards such as flooding?		X				
. Changes in the quality of groundwater?		X				
. Changes in the quantity of groundwater?		X				
. Increase in the risk of contamination of surface or groundwater?		X				
. Violation of the Montana Non Degradation Statute?		X				
. Effects on any existing water right or reservation?		X				
. Effects on other water users as a result of any alteration in surface or groundwater quality?		X				
. Effects on other users as a result of any alteration in surface or groundwater quantity?		X				
. Other: _						

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Water Resources (Attach additional pages of narrative if needed):

PHYSICAL ENVIRONMENT (continued)

4. <u>VEGETATION</u> Will the proposed action result in:	IMPACT				Can Impacts Be Mitigated *	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
a. Changes in the diversity, productivity or abundance of plant species (including trees, shrubs, grass, crops, and aquatic plants)?		X				
b. Alteration of a plant community?		X				
c. Adverse effects on any unique, rare, threatened, or endangered plant species?		X				
d. Reduction in acreage or productivity of any agricultural land?		X				
e. Establishment or spread of noxious weeds?		X				
f. Other: _						

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Vegetation Resources (Attach additional pages of narrative if needed):

PHYSICAL ENVIRONMENT

5. FISH/WILDLIFE Will the proposed action result in:	IMPACT				Can Impact Be Mitigated*	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
a. Deterioration of critical fish or wildlife habitat?		X				
b. Changes in the diversity or abundance of game animals or bird species?			X			5b & d
c. Changes in the diversity or abundance of non-game species?			X			5c
d. Introduction of new species into an area?				X		5b & d
e. Creation of a barrier to the migration or movement of animals?		X				
f. Adverse effects on any unique, rare, threatened, or endangered species?		X				
g. Increase in conditions that stress wildlife populations or limit abundance (including harassment, legal or illegal harvest or other human activity)?		X				
h. Other: _						

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Fish/Wildlife Resources (Attach additional pages of narrative if needed):

5b & d – Cutthroat trout will be allowed to colonize a section of stream that was previously unavailable to fish by virtue of a natural waterfall, which prevented upstream movement. This will provide a controlled expansion of cutthroat trout, within their existing range, and there will be no danger of future compromise by brook trout and rainbow trout encroachment because of the natural barrier.

5c – The only anticipated change in nongame species will be in abundance of stream-borne insects, as they will likely provide the major food source for the fish, an otherwise naturally occurring process. The insect community of Robertson Creek was sampled and identified to a reasonable degree of taxonomic resolution. *Hydropsychids* represented nearly 40% of the sample. *Peltoperlids* and *Chloroperlids*, combined, represented nearly 40% of the sample, and the remaining 20% was comprised of *Baetidae* and *Chironomidae*.

HUMAN ENVIRONMENT

6. <u>NOISE/ELECTRICAL EFFECTS</u> Will the proposed action result in:	IMPACT				Can Impact Be Mitigated*	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
a. Increases in existing noise levels?		X				
b. Exposure of people to serve or nuisance noise levels?		X				
c. Creation of electrostatic or electromagnetic effects that could be detrimental to human health or property?		X				
d. Interference with radio or television reception and operation?		X				
e. Other: __						

Narrative Description and Evaluation of the Cumulative and Secondary Noise/Electrical Effects (Attach additional pages of narrative if needed):

HUMAN ENVIRONMENT

7. <u>LAND USE</u> Will the proposed action result in:	IMPACT				Can Impact Be Mitigated*	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
a. Alteration of or interference with the productivity or profitability of the existing land use of an area?		X				
b. Conflicted with a designated natural area or area of unusual scientific or educational importance?		X				
c. Conflict with any existing land use whose presence would constrain or potentially prohibit the proposed action?		X				
d. Adverse effects on or relocation of residences?		X				
e. Other: __						

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Land Resources (Attach additional pages of narrative if needed):

HUMAN ENVIRONMENT

8. <u>RISK/HEALTH HAZARDS</u> Will the proposed action result in:	IMPACT				Can Impact Be Mitigated*	Comment* Index
	Unknown*	None	Minor*	Potentially Significant*		
a. Risk of an explosion or release of hazardous substances (including, but not limited to oil, pesticides, chemicals, or radiation) in the event of an accident or other forms of disruption?		X				
b. Affect an existing emergency response or emergency evacuation plan or create a need for a new plan?		X				
c. Creation of any human health hazard or potential hazard?		X				
d. Other: __						

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Risk/Health Hazards (Attach additional pages of narrative if needed):

HUMAN ENVIRONMENT

9. <u>COMMUNITY IMPACT</u> Will the proposed action result in:	IMPACT*				Can Impact Be Mitigated*	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
a. Alteration of the location, distribution, density, or growth rate of the human population of an area?		X				
b. Alteration of the social structure of a community?		X				
c. Alteration of the level or distribution of employment or community or personal income?		X				
d. Changes in industrial or commercial activity?		X				
e. Increased traffic hazards or effects on existing transportation facilities or patterns of movement of people and goods?		X				
f. Other: __						

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Community Impact (Attach additional pages of narrative if needed):

HUMAN ENVIRONMENT9

10. <u>PUBLIC SERVICES/TAXES/UTILITIES</u> Will the proposed action result in:	IMPACT*				Can Impact Be Mitigated*	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
a. Have an effect upon or result in a need for new or altered governmental services in any of the following areas: fire or police protection, schools, parks/recreational facilities, roads or other public maintenance, water supply, sewer or septic systems, solid waste disposal, health, or other governmental services? If any, specify:		X				
b. Have an effect upon the local or state tax base and revenues?		X				
c. Result in a need for new facilities or substantial alterations of any of the following utilities: electric power, natural gas, other fuel supply or distribution systems, or communications?		X				
d. Result in increased used of any energy source?		X				
e. Other: __						

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Public Services/Taxes/Utilities (Attach additional pages of narrative if needed):

Robertson Creek Final EA 10/11/00

*Include an attachment with a narrative explanation describing the scope and level of impact. If the impact is unknown, explain why the unknown impact has not or cannot be evaluated.

HUMAN ENVIRONMENT

11. <u>AESTHETICS/RECREATION</u> Will the proposed action result in:	IMPACT*				Can Impact Be Mitigated*	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
a. Alteration of any scenic vista or creation of an aesthetically offensive site or effect that is open to public view?		X				
b. Alteration of the aesthetic character of a community or neighborhood?		X				
c. Alteration of the quality or quantity of recreational/tourism opportunities and settings? (Attach Tourism Report)		X				
d. Other: _						

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Aesthetics/Recreation (Attach additional pages of narrative if needed):

HUMAN ENVIRONMENT (continued)

2. <u>CULTURAL/HISTORICAL RESOURCES</u> Will the proposed action result in:	IMPACT				Can Impacts Be Mitigated*	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
. Destruction or alteration of any site, structure or object of rehistoric, historic, or paleontological importance?		X				
. Physical change that would affect unique cultural or historic values?		X				
. Effects on existing religious or sacred uses of a site or area?		X				
. Other: _						

Narrative Description and Evaluation of the Cumulative and Secondary Effects on Cultural/Historical Resources (Attach additional pages of narrative if needed):

SIGNIFICANCE CRITERIA

3. SUMMARY EVALUATION OF SIGNIFICANCE

If the proposed action, considered as a whole:

	IMPACT				Can Impacts Be Mitigated*	Comment Index
	Unknown*	None	Minor*	Potentially Significant*		
. Have impacts that are individually limited, but cumulatively considerable? (A project or program may result in impacts on two or more separate resources which create a significant effect when considered together or in total.)		X				
. Involve potential risks or adverse effects which are uncertain but extremely hazardous if they were to occur?		X				
. Potentially conflict with the substantive requirements of any local, state, or federal law, regulation, standard or formal plan?		X				
. Establish a precedent or likelihood that future actions with significant environmental impacts will be proposed?				X	X	13d
. Generate substantial debate or controversy about the nature of the impacts that would be created?						13e
. Other: _						

Narrative Description and Evaluation of the Summary Evaluation of Significance (Attach additional pages of narrative if needed):

13d – This project is part of a cutthroat conservation and restoration plan proposed for the Good and Shepard creek drainages. Future projects are expected to incorporate the use of piscicides to remove exotic brook and rainbow trout in an effort to restore the native cutthroat element to the proposed streams. This action is being proposed because of its simplicity of providing an isolated population of genetically pure westslope cutthroat trout, which displays resident life history characteristics. This project and the proposed future cutthroat projects are mutually exclusive in kind (technique), and the success of one will have no bearing on the success of another in terms of establishing a precedence.

13e – This particular project is not expected to be controversial at all. However, the project (as mentioned above), in its entirety, may be controversial because of the anticipated use of piscicides in OTHER streams.

PART II. ENVIRONMENTAL REVIEW (Continued)

1. Description and analysis of reasonable alternatives (including the no action alternative) to the proposed action whenever alternatives are reasonably available and prudent to consider and a discussion of how the alternatives would be implemented:

The only alternative for this project is no action, in which case, Robertson Creek would remain fishless.

2. Evaluation and listing of mitigation, stipulation, or other control measures enforceable by the agency or another government agency: N/A
3. Based on the significance criteria evaluated in this EA, is an EIS required? YES / NO If an EIS is not required, explain why the EA is the appropriate level of analysis for this proposed action:

No EIS is required. Because of the simplicity of this project and the anticipated public acceptance, it is believed that an EA is an appropriate level of analysis.

4. Describe the level of public involvement for this project if any and, given the complexity and the seriousness of the environmental issues associated with the proposed action, is the level of public involvement appropriate under the circumstances?

This project has been presented to the Flathead Valley Chapter of Trout Unlimited and to a few local private landowners.

5. Duration of comment period if any:

September 18 through October 2, 2000

6. Name, title, address and phone number of the person(s) responsible for preparing the EA:

Grant Grisak, Fisheries Biologist
MT Fish, Wildlife & Parks
490 N Meridian Road
Kalispell, MT 59901
(406) 751-4541

PART III. NARRATIVE EVALUATION AND COMMENT

Martin and Griffin creeks are neighboring streams that have natural waterfall barriers on them. They also have genetically pure westslope cutthroat trout populations above and mixed populations downstream, dominated by brook trout. These streams serve as templates for the potential of Robertson Creek to provide a stronghold cutthroat population safe from invasion by exotic trout.

Due to its simplicity, compared to other restoration techniques, stocking fishless streams is a preferred and successfully proven technique of conserving other cutthroat trout species (Behnke & Zarn, 1976 and Young, et al., 1996). It is believed that this project will be fundamental in the cutthroat trout conservation/restoration program proposed for Good and Shepard Creeks.

Behnke, R. and M Zarn. 1976. Biology and management of threatened and endangered western trouts. U.S.D.A. Forest Service, technical report RM-28, Denver.

Young, M., Schmal, R., Konley, T. and V. Leonard. 1996. Conservation status of Colorado River cutthroat trout. U.S.D.A. Forest Service, general technical report RM-GTR-282.

PART IV. EA CONCLUSION SECTION

It is believed that this project will benefit the public by providing a cutthroat trout population, protected by a natural barrier, that may be useful in future management programs by providing a source for genetically pure eggs and sperm from fish displaying resident life-history type behavioral characteristics.
