Re: Environmental Review for the Sanitary Sewer System PER, Town of Jordan, Montana

Dear Reviewer:

ME&A is currently compiling a PER to evaluate the Town of Jordan's sanitary sewer system, identify any deficiencies, and propose potential measures to address the deficiencies.

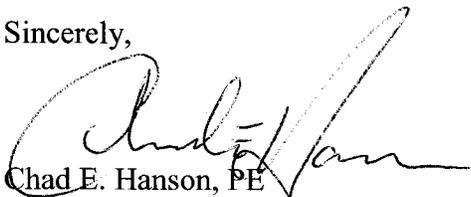

The majority of the town is located in the NW ¼ of Section 17, Township 18N, Range 38E, and is bounded by Big Dry Creek to the south. The existing lagoons are located east of town, across Big Dry Creek, in the SW ¼ of the NW ¼ of Section 16, Township 18N, Range 38E.

Potential improvements to the system include the replacement of existing sewer mains throughout town, the expansion of the existing lagoons, and/or the addition of a sprinkler system to land apply treated wastewater.

We are contacting your agency in an attempt to identify any potential environmental impacts associated with the planned development. Please take a few moments to review the site and provide a written response detailing the presence, or absence, of any potential environmental impacts.

Thank you very much for your assistance in this matter.

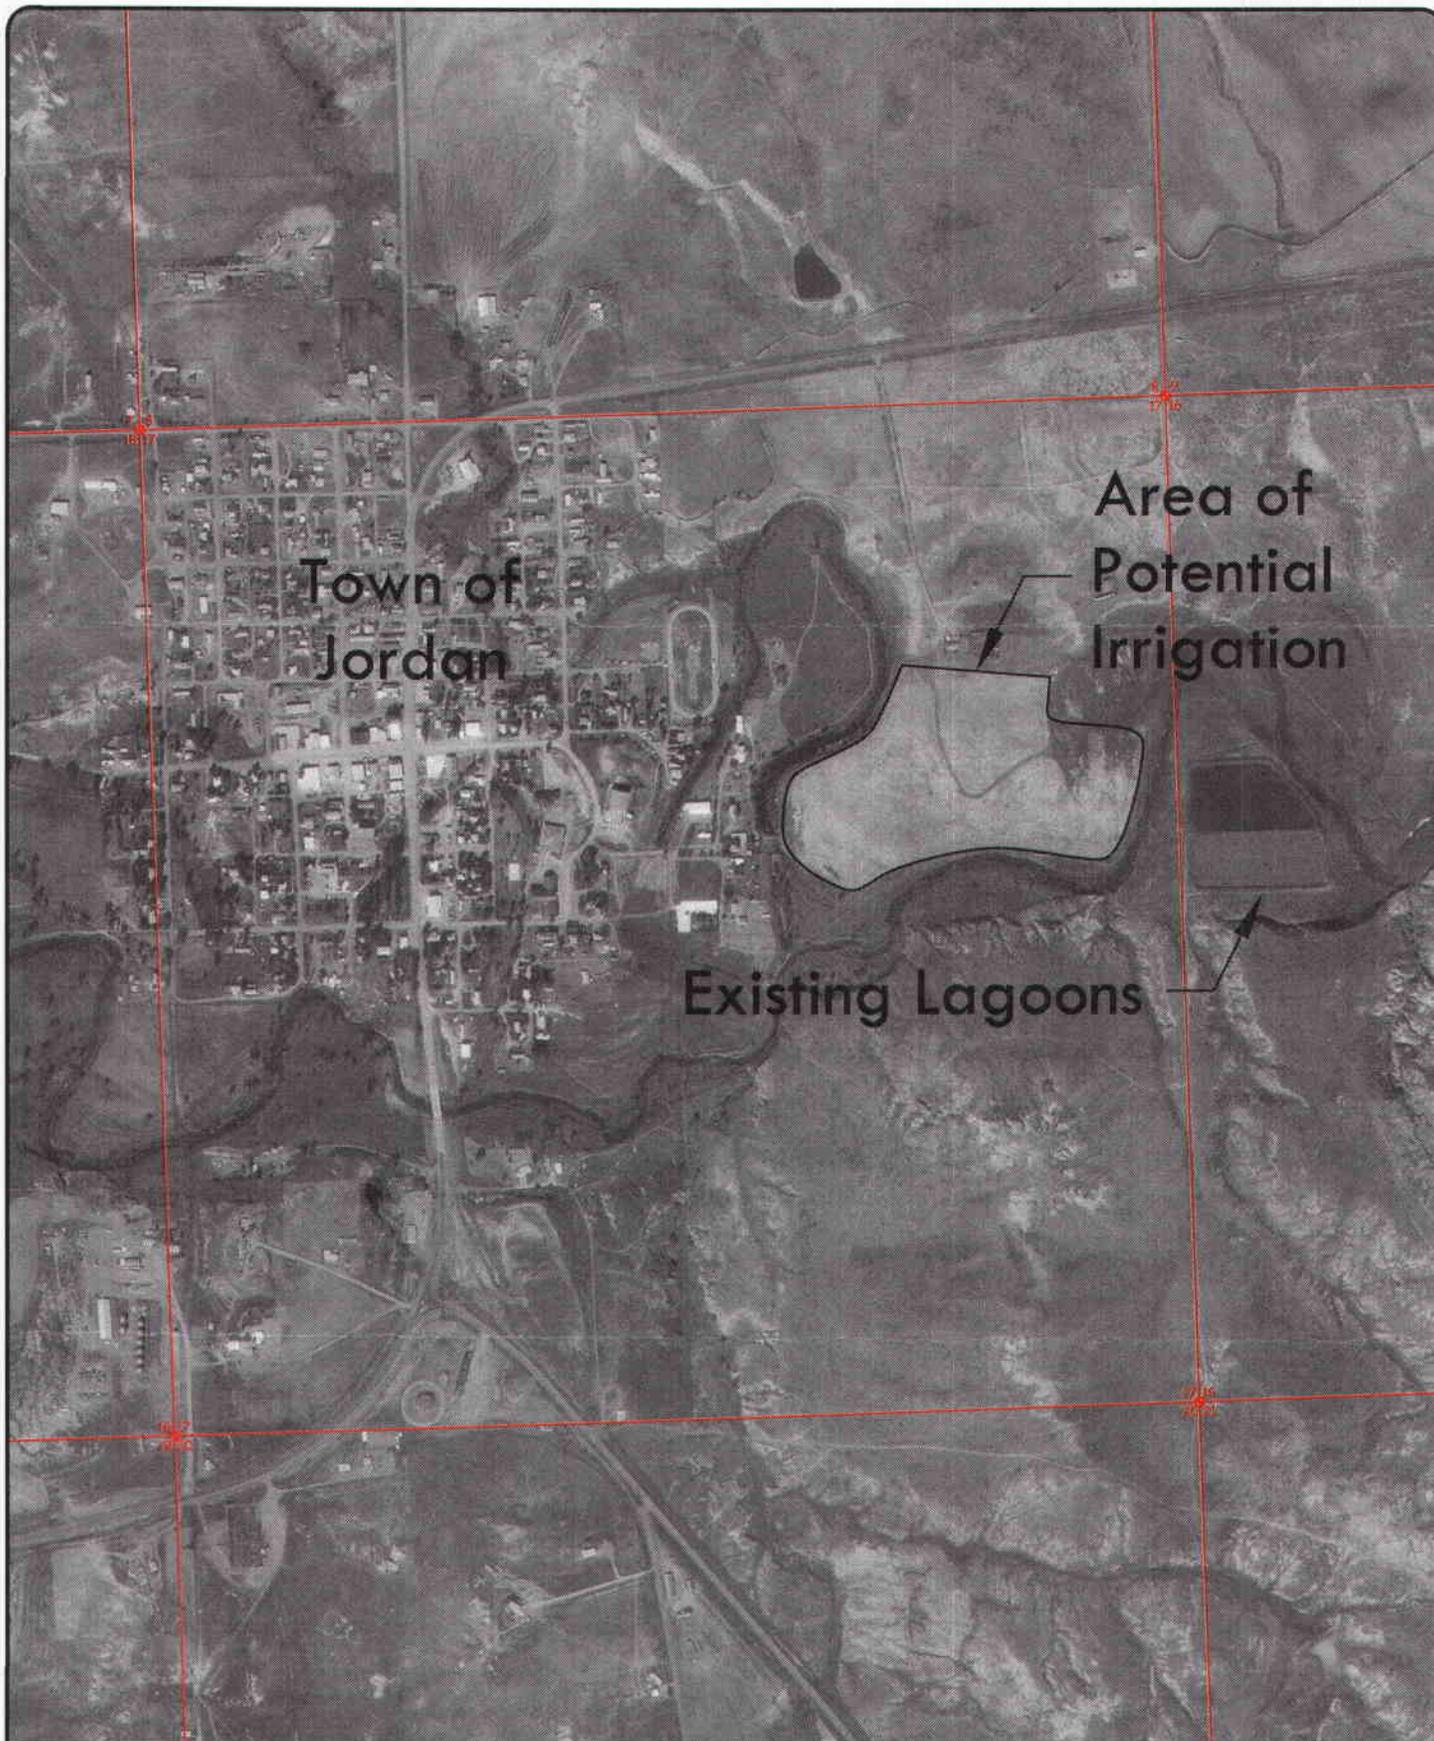

Sincerely,

Chad E. Hanson, PE
Project Engineer
