

Supplement to Environmental Assessment

Proponent: Granite Concrete Company, Inc.

Project: Amendment to Granite Site; Libby Pit

Legal Description: NE1/4, Sec. 1, T29N, R31W

Proposed Action: Granite Concrete Company, Inc. is proposing to increase their mined level disturbance area by 4.4 acres thereby increasing the total permit area to 31.7 acres. This modification is the result of greater accuracy by using more refined mapping tools. The Proponent would also extend the date of final reclamation until 2017 to allow a more complete and orderly removal of the resource in this specific area.

Potential Impacts and Mitigation: This action will not create impacts that are of greater significance than those previously identified and analyzed in the original Environmental Assessment completed on August 8, 2003. The Plan of Operation remains relevant and achievable. The operator has satisfactorily reclaimed significant portions of the mined area in the recent past, a portion of which resides on lands administered by the USFS.
