Ladies and Gentlemen:

Pursuant to the Administrative Rules of Montana, 17.4.609, the following Environmental Assessment has been prepared by the Department of Environmental Quality concerning Hanser's Automotive proposed expansion of a motor vehicle wrecking facility.

The purpose of the Environmental Assessment is to inform all interested governmental agencies, public groups or individuals of the proposed action and to determine whether or not the action may have a significant effect on the human environment. This Environmental Assessment will be circulated for a period of thirty (30) days at which time a decision will be made as to our future action.

If you care to comment on this proposed action, please do so within the allotted time.

Sincerely,

Bruce W. Meyer
Motor Vehicle Recycling & Disposal Program

ENVIRONMENTAL ASSESSMENT (EA)

Division/Bureau: Permitting & Compliance \ Motor Vehicle Recycling and Disposal Program

Project or Application: Hanser's Automotive, Billings, MT - A proposed private auto wrecking facility.

Description of Project: Hanser's Automotive \ dba \ Hanser's Salvage Company located at 430 S. Billings Blvd, Billings, Montana, has submitted a proposed expansion of a motor vehicle wrecking facility license application to this department for review. The proposed motor vehicle wrecking facility will be in Yellowstone County. This facility will be located at 439 South Billings Blvd, Billings, MT. The legal description of the facility is in Lot 5 of SW ¼ Section 9, Township 1 South, Range 26 East. The expansion is approximately 2 acres in size.

Benefits and Purpose of Proposal: Hanser's Automotive is expanding a motor vehicle wrecking facility at Billings, MT. As required by the Motor Vehicle Recycling and Disposal Act, all wrecking facilities must be shielded from public view. "Public view" is defined as any point six (6) feet above the surface of the center of a public road from which the junk vehicles can be seen. By obtaining a motor vehicle wrecking facility license, Hanser's Automotive would be allowed to: (1) Buy, sell, or deal in four or more vehicles per year of a type required to be licensed, for the purpose of wrecking, dismantling, disassembling, or substantially altering the form of the motor vehicle, (2) Buy or sell component parts, in whole or in part, and deal in second-hand junk vehicles, and (3) Purchase wrecked vehicles from insurance companies. Insurance companies are required by state law to sell junk vehicles only to licensed motor vehicle wrecking facilities. This business would provide a commercial source of automotive parts which would provide a cost saving to the consumer and would conserve energy and natural resources otherwise used to manufacture new parts.

Description and analysis of reasonable alternatives whenever alternatives are reasonably available and prudent to consider:

Alternative #1. Not to expand and license a facility at this location. This would limit public access to used automotive parts.

Alternative #2. To establish and license a facility at a location other than the one proposed in the license application. This would require the applicant to find and acquire by purchase or lease a different parcel of property for the proposed usage.

Alternative #3. To establish and license a facility at the proposed location.

A listing and appropriate evaluation of mitigation, stipulations and other controls enforceable by the agency or another government agency: Automotive fluids must be drained from the vehicles prior to the vehicle being placed in storage. All fluids removed from the vehicles must be captured over an impermeable surface, properly containerized, and properly stored for reuse, recycling, or proper disposal. This is a management method intended to alleviate the potential for groundwater contamination. This is a license condition enforceable by the agency.

CFCs (Freon) must not be released to the environment. This is a federally enforceable requirement and is enforced by the U.S. EPA.

Recommendation: N/A

If an EIS is needed, and if appropriate, explain the reasons for preparing the EA:
N/A

If an EIS is not required, explain why the EA is an appropriate level of analysis:
Based on the information submitted for review with the license application, it is the preliminary determination of the department that an Environmental Assessment (EA) will provide an adequate review for this proposal.

Other groups or agencies contacted or which may have overlapping jurisdiction:
Yellowstone County Commissioners.

Individuals or groups contributing to this EA: Montana Department of Natural Resources and Conservation; United States Department of Agriculture, Natural Resource Conservation Service; Montana Historical Society, and State Historic Preservation Office.

EA prepared by Bruce W. Meyer

Date: March 15, 2010

POTENTIAL IMPACT ON PHYSICAL ENVIRONMENT

11. Locally Adopted Environmental Plans and				xxx		xxx

*Maj = Major; Mod = Moderate; Min = Minor; Unkn = Unknown; Att = Attached

CUMULATIVE AND SECONDARY IMPACTS: The impacts will be minor for local and state tax base and tax revenue due to the expansion of the facility. The quantity and distribution of employment will be minor to none because of the number employed. The demands for government services will be minor to none and will be covered by county staff and state staff.

HANSER'S AUTOMOTIVE - ENVIRONMENTAL ASSESSMENT

General Comments

The Montana Department of Environmental Quality licenses and regulates motor vehicle wrecking facilities under the authority of the Motor Vehicle Recycling & Disposal Act (75-10-501, MCA) and Administrative Rules of Montana (ARM 17.50.201).

To be eligible for licensing, a proposed wrecking facility must:

- 1) Be in compliance with all existing zoning ordinances on the date the license application is submitted to the department.
- 2) Be capable of being shielded from view of any existing public road. If the license application is approved, the applicant must construct all necessary shielding prior to the commencement of operations at the facility.
- 3) Not create any adverse environmental impacts.

The department has made the preliminary determination that the applicant is in compliance with the existing zoning ordinances as of the date of the submittal of the application and can effectively shield the proposed facility from all public roads in the area. The purpose of the Environmental Assessment is to determine if the proposed motor vehicle wrecking facility can be established without posing significant adverse environmental impacts.

Potential Impacts on Physical Environment

1. Terrestrial & aquatic life habitats
4. Vegetation cover, quantity and quality

The proposed motor vehicle wrecking facility will be in Yellowstone County. This facility will be located at 439 South Billings Blvd, Billings, MT. The legal description of the facility is in Lot 5 of SW ¼ Section 9, Township 1 South, Range 26 East. The expansion is approximately 2 acres in size.

The expansion of this motor vehicle wrecking facility will disturb and displace a small amount of the vegetation and wildlife habitat within the proposed location. The impacts caused by the wrecking facility should not be significant to the area's ecosystem. Residential lots and commercial lots will surround the wrecking facility.

2. Water quality, quantity, and distribution

There are many wells in the area of the proposed wrecking facility. The average total depth of the wells in Township 1 South, Range 26 East and Sections 3, 4, 5, 8, 9, 10, 15, 16, and 17 range from 10' to 140' in total depth with a static water levels between 2' and 37' below ground surface (BGS).

All fluids removed from the vehicles must be captured over an impermeable surface, properly containerized, and properly stored for reuse, recycling, or proper disposal. The applicant will recycle these fluids on a timely basis.

This proposal is reasonably expected to not have any impacts on the quality, quantity, and distribution of the ground water with the above management practices in place.

3. Geology and soil quality, stability, and moisture

The dominant soil in the vicinity of the site is classified by the U.S Natural Resource Conservation Service as the Lohmiller Series. This series consists of very deep, well drained soils, and formed in alluvium on bottom lands. Permeability is slow or moderately slow. Land slopes ranging from 0 to 8 percent. The annual precipitation is 15 inches and the mean annual temperature is 46 degrees (F). Lohmiller soils are used for cropland and rangeland.

Waste anti-freeze, gasoline, and lubricating oils contain petroleum distillates, heavy metals, and possibly toxic compounds. If improperly disposed of, these fluids can cause surface and groundwater degradation. The applicant proposes to properly recycle all of the above-named automotive fluids. Some residual lubricating oils and anti-freeze may drip from the vehicles stored at the facility. This residual dripping is not expected to cause any surface or groundwater degradation.

5. Aesthetics

The applicant will constructed a steel fence to shield the junk vehicles from public view. An onsite evaluation will be done by department personnel to determine that the shielding would be adequate to meet the requirements of the Motor Vehicle Recycling & Disposal Act.

"Public view" is defined as any point six (6) feet above the surface of the center of a public road from which the junk vehicles can be seen.

9. Historical and archaeological sites

The State Historic Preservation Office (SHPO) conducted a cultural resource file search for this property. According to (SHPO) records there have been no previously recorded sites within the designated search locales. The absence of cultural properties in the area does not mean that they do not exist but rather may reflect the absence of any previous cultural resource inventory in the area.

It is SHPO's position that any structure over fifty years of age is considered historic and is potentially eligible for listing on the National Register of Historic Places. If any structures are to be altered and are over fifty years old we would recommend that they be recorded and determination of their eligibility be made.

The State Historic Preservation Office anticipates a low likelihood cultural properties will be impacted, and recommends that a cultural resource inventory is unwarranted at this time. However, should cultural materials be inadvertently discovered during this project we would ask that (SHOP) office be contacted and the site investigated?

Potential Impacts on Human Environment

3. Local & state tax base & tax revenue
7. Quantity and distribution of employment

The expansion of the proposed motor vehicle wrecking facility may provide a source of used motor vehicles or component parts for sale to the public. The issuance of a motor vehicle wrecking facility license will allow the applicant to: (1) Buy, sell, or deal in four or more vehicles per year of a type required to be licensed for the purpose of wrecking, dismantling, disassembling, or substantially altering the form of the motor vehicle, (2) Buy or sell component parts, in whole or in part, and deal in second-hand motor vehicle parts, and (3) Purchase wrecked vehicles from insurance companies. Insurance companies are required by state law to sell junk vehicles only to licensed motor vehicle wrecking yards.

The expansion of a motor vehicle wrecking facility may create an additional labor requirement and may result in additional employment. This employment and the employment requirements for the support services of this yard may provide a neutral to positive employment impact for the community.

9. Demands for governmental services

The issuance of a motor vehicle wrecking facility license will require administrative and inspection services of the Montana Department of Environmental Quality and the Yellowstone County Junk Vehicle Program personnel.

11. Locally adopted environmental plans and goals

The establishment of a motor vehicle wrecking facility at this location does not conflict with any existing zoning ordinances as certified by Nicole Cromwell, Zoning Coordinator, City of Billings, Yellowstone County, Billings, MT.

Effect on Adjoining Landowners and Land Uses Other Site-Specific Information

Information gathered for the preparation of this Environmental Assessment reveals that directly adjacent to the proposed location are tracts of land used for other residential and commercial businesses. The management practices of proper waste disposal and shielding the junk vehicles from public view will minimize impacts to adjoining landowners and land uses.
