12 method approved by the board, that must be determined for a project area prior to commencing a new or  
13 expanded enhanced recovery project or the recompletion of a well as a horizontally completed well or the  
14 recompletion of an existing horizontal well. The approved production decline rate must be certified in writing to  
15 the department by the board. In that certification, the board shall identify the project area and shall specify the  
16 projected rate of future oil production by calendar year and by calendar quarter within each year. The certified  
17 rate of future oil production must be used to determine the volume of incremental production that qualifies for  
18 the tax rate imposed under 15-36-304(5)(e).

19 (21) (a) "Qualifying production" means the first 12 months of production of oil or natural gas from a  
20 well drilled after December 31, 1998, or the first 18 months of production of oil or natural gas from a horizontally  
21 completed well drilled after December 31, 1998, or from a well that has not produced oil or natural gas during  
22 the 5 years immediately preceding the first month of qualifying production.

23 (b) Qualifying production does not include oil production from a horizontally recompleted well.

24 (22) "Secondary recovery project" means an enhanced recovery project, other than a tertiary recovery  
25 project, that commenced or was expanded after December 31, 1993, and meets each of the following  
26 requirements:

27 (a) The project must be certified as a secondary recovery project to the department by the board. The  
28 certification may be extended only after notice and hearing in accordance with Title 2, chapter 4.

1 (b) The property to be affected by the project must be adequately delineated according to the  
2 specifications required by the board.

3 (c) The project must involve the application of secondary recovery methods that can reasonably be  
4 expected to result in an increase, determined by the board to be significant in light of all the facts and  
5 circumstances, in the amount of oil that may potentially be recovered. For purposes of this part, secondary  
6 recovery methods include but are not limited to:

7 (i) the injection of water into the producing formation for the purposes of maintaining pressure in that  
8 formation or for the purpose of increasing the flow of oil from the producing formation to a producing wellbore;  
9 or

10 (ii) any other method approved by the board as a secondary recovery method.

11 (23) "Stripper natural gas" means the natural gas produced from any well that produces less than  
12 60,000 cubic feet of natural gas a day during the calendar year immediately preceding the current year.  
13 Production must be determined by dividing the amount of production from a lease or unitized area for the year  
14 immediately preceding the current calendar year by the number of producing wells in the lease or unitized area  
15 and by dividing the resulting quotient by 365.

16 (24) "Stripper well exemption" or "stripper well bonus" means petroleum and other mineral or crude oil  
17 produced by a stripper well that produces 3 barrels a day or less. Production from this type of well must be  
18 determined as provided in subsection (15)(c).

19 (25) "Tertiary recovery project" means an enhanced recovery project, other than a secondary recovery  
20 project, using a tertiary recovery method that meets the following requirements:

21 (a) The project must be certified as a tertiary recovery project to the department by the board. The  
22 certification may be extended only after notice and hearing in accordance with Title 2, chapter 4.

23 (b) The property to be affected by the project must be adequately delineated in the certification  
24 according to the specifications required by the board.

25 (c) The project must involve the application of one or more tertiary recovery methods that can  
26 reasonably be expected to result in an increase, determined by the board to be significant in light of all the facts  
27 and circumstances, in the amount of crude oil that may potentially be recovered. For purposes of this part,  
28 tertiary recovery methods include but are not limited to:

- 1 (i) miscible fluid displacement;
- 2 (ii) steam drive injection;
- 3 (iii) micellar/emulsion flooding;
- 4 (iv) in situ combustion;
- 5 (v) polymer augmented water flooding;
- 6 (vi) cyclic steam injection;
- 7 (vii) alkaline or caustic flooding;
- 8 (viii) carbon dioxide water flooding;
- 9 (ix) immiscible carbon dioxide displacement; and
- 10 (x) any other method approved by the board as a tertiary recovery method.

11 (26) "Well" or "wells" means a single well or a group of wells in one field or production unit and under  
 12 the control of one operator or producer.

13 (27) "Working interest owner" means the owner of an interest in an oil or natural gas well or wells who  
 14 bears any portion of the exploration, development, and operating costs of the well or wells."
