Legislative Finance Committee  
c/o Amy Carlson, Legislative Fiscal Analyst & Director  
P.O. Box 201711  
Helena, MT 59620-1711

Dear Director Livers and the Honorable Rep. Kimberly Dudik,

In accordance with §17-7-202(2)(e), MCA, we respectfully submit the enclosed 2020 Facility Inventory & Condition Assessment Report which is the product of a collaborative effort among the Architecture & Engineering Division, multiple state agencies, and the University System.

Sincerely,

John Lewis, Director  
Department of Administration

Russ Katherman, Administrator  
Architecture & Engineering Division

# Report Summary

This report continues the process of providing the Office of Budget and Program Planning and Legislative Finance Committee the current status on the State-Owned Facility Inventory and the LRBP-eligible building Facility Condition Assessments as required in §17-7-202 MCA, which provides an opportunity to foresee and strategize ways to address the inevitable deterioration of built assets. Using data collected by qualified assessors, condition information and the associated cost of repairs/replacements or capital renewal needs can be prioritized to timely mitigate deferred maintenance liabilities. The passage of HB 553 by the 66<sup>th</sup> Legislature created the “Major Repair Account” to provide consistent resources for prioritized corrective action rather than being deferred into a more expensive or crisis-management stage in the future (a.k.a. deferred maintenance backlog). Completing backlog projects combined with future assessments will help determine the adequacy of the 0.6% of Current Replacement Value level of funding provided in 17-7-222 MCA.

Agencies must support the needs of their mission, either through the use of existing facilities or through the fiscally responsible construction of new facilities. Management of existing real property involves both facility sustainment and recapitalization. Whereas sustainment focuses on keeping facilities operational through preventative maintenance and repair; recapitalization includes the restoration, modernization, or replacement of facilities or their structural components to extend or restore a facility’s lifecycle.

Achieving inventory-wide Facility Condition Assessment (FCA) goals;

- Ensuring that all State facilities are capable of meeting mission requirements and providing a reasonable quality of work life support to personnel using them; and
- Establishing methods to identify and remediate within a reasonable timeframe any “failing facilities,” i.e., facilities in poor physical condition; through demolition, replacement, or repair.

Considerable investment has been made by the State to construct its vertical infrastructure portfolio and it is anticipated the Facility Condition Assessment process for LRBP-eligible buildings will confirm the LAD and LFD perspectives on the need to establish a definitive and consistent level of funding into the LRBP to address the increasing deferred maintenance backlog.

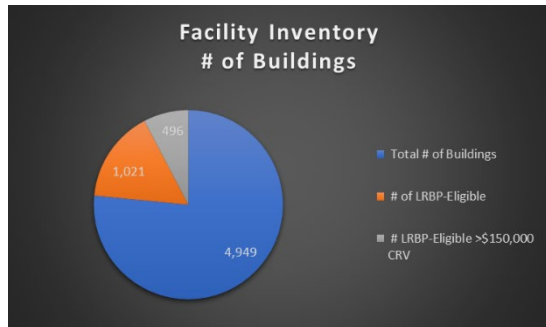

The Architecture & Engineering (A&E) Division of the Department of Administration is tasked with the primary responsibility for establishing and conducting the Facility Condition Assessment (FCA) program as well as managing LRBP “Major Repair” account funds for projects as they are appropriated each legislative session.

The following provides a brief summary of the detailed content, status, and progress provided within the body of this report:

## **Current Status**

State agencies continue to collaborate and assist A&E with review of current inventory data, analyzing the scope needs of the FCA, and help define a strategy to address the requirements in §17-7-202 MCA. Current FCA summary data is provided in Appendix D.

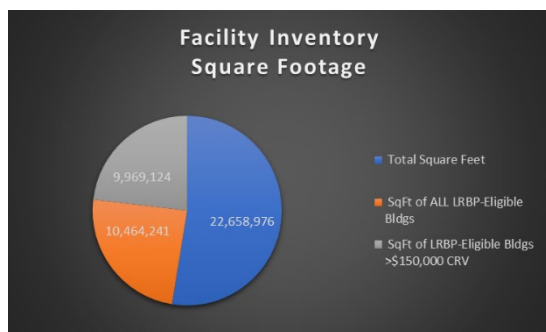

In Aug 2020, A&E Division was able to procure the Archibus Sustainment Management System (SMS) software. This platform will allow for a more consistent and accurate collection of inventory data across the Agencies providing a better understanding of the overall facility portfolio. It will also benefit the State in the long-term through easier access, better data control, and integrated functions.

Initial review of the 2020 Risk Management & Tort Defense (RMTD) database indicates (2018 values in parenthesis):

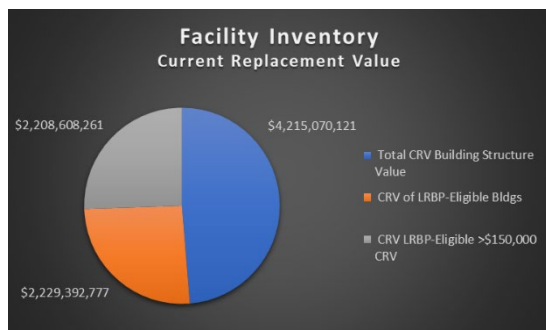

1) A total State-Owned inventory of:

- a) 4,949 buildings (4,787);
- b) 22,658,976 square feet (23,520,636); and,
- c) currently valued at \$4,215,070,121 (\$3,932,908,713).

2) Buildings meeting the definition of LRBP-eligible (excludes the Capitol complex):

- a) 1,021 (976);
- b) 10,464,241 (9,444,522) square feet; and,
- c) \$2,229,392,777 (\$1,861,876,122) in replacement value.

3) Of the LRBP-eligible buildings:

- a) 496 (470) are greater than \$150,000 in current replacement value and are now statutorily required to have condition assessments conducted;
- b) Consisting of 9,969,124 (8,987,009) square feet; and,
- c) \$2,208,608,261 (\$1,842,294,330) in replacement value.

#### **MINIMUM FUNDING FOR MAJOR REPAIR, 17-7-222 MCA**

The minimum level of funding for major repairs is 0.6% of the current replacement value of all LRBP-eligible buildings for each fiscal year. The funding level to be met in the Major Repair Long Range Building Program account for projects for the upcoming biennium is:

$$(\$2,229,392,777 \times 0.6\%) \times 2 \text{ fiscal years} = \$26,752,713$$

4) Though 21% (20%) of the total inventory, LRBP-eligible buildings comprise 46% (40%) of the total square footage in the inventory and represent over half (53%) the State's total building infrastructure value.

### Action Plan

A&E and the working group are continuing their efforts in the following areas:

- 1) Continue collaboration with all State Agencies and fully incorporate facility inventory data into the Archibus database and complete facility inventory assessments for LRBP-eligible buildings to establish unbiased and consistent data;
- 2) Using Archibus generated data (e.g., Facility Condition Index, Facility Replacement Value), review of the inventory data for verification and consideration of how insured current replacement cost values and project cost replacement values may or may not differ;
- 3) Analysis for the Long-Term Action Plan matrix of options and possible strategies available.

### Acknowledgements

The content of this report is the work of a dedicated collaboration across state government. It is not the product of the A&E Division alone, but the concentrated effort by many individuals and representatives of Departments and the University system who are interested in the care and condition of state assets.

A&E wishes to acknowledge and thank them for their participation and contributions. Team members:

# Current Status of Statewide Inventory & Condition Assessments

This report provides the Legislature and Office of Budget & Program Planning with status information on the size of the overall inventory of State-Owned facilities and the progress made by the Department in establishing a program for condition assessments of those buildings that have the Major Repair Long-Range Building Program fund as an option to address deferred maintenance issues. As provided in §17-7-202, assessments are not mandatory on State-Owned buildings unless they receive a portion of general fund dollars for operations and maintenance or serve as part of the academic mission of the university system.

The Archibus software application was developed to help engineers, technicians and managers decide when, where and how to best maintain existing infrastructure. Because assets are so vast and diverse, a “knowledge-based” philosophy drives the SMS process. The process starts with the automated download of real property data, and then more detailed system inventory is modeled and/or collected which identifies components and their key life cycle attributes such as the age and material. From this inventory, Condition Index (CI) measures for each component are predicted based on its expected stage in the life-cycle. Objective and repeatable inspections can then be performed on various components to verify their condition with respect to the expected life-cycle deterioration. The level of detail and frequency of these inspections are not fixed like other processes; they are dependent on knowledge of component criticality, the expected and measured condition and rate of deterioration, and remaining maintenance and service life. This “knowledge-based” inspection focuses attention to the most critical components at the time. In addition to these condition assessments, functionality assessments can be performed to evaluate user requirement changes, compliance and obsolescence issues. This provides a comprehensive picture of the overall performance of assets and their key components.

## Expectations of §17-7-201 MCA

While all State-Owned buildings, facilities, or structures valued greater than \$150,000 must be included in the inventory, §17-7-201(4), provides a definition that makes certain State-Owned facilities eligible for funding from the Major Repair Long-Range Building Program (LRBP) account. An LRBP-eligible building is one:

- “for which the operation and maintenance are funded with state general fund money; or
- that supports academic missions of the university system and for which the operation and maintenance are funded with current unrestricted university funds.”

Many projects from many funding sources are approved through the Long-Range Building Program (typically House Bill #5). This is the proper location for all State-Owned facilities projects to

received legislative consideration, appropriation, and/or authorization, regardless of the funding source.

However, all other State-Owned facilities that don't meet the eligibility definition are excluded from getting funds from the Major Repair account if the operation and maintenance is entirely funded with state special revenue, federal special revenue, or proprietary funds; or that supports nonacademic functions of the university system and for which the operation and maintenance are funded from nonstate and nontuition sources.

## Expectations of §17-7-202 MCA

For every State-Owned facility, §17-7-202(2), requires the statewide facility inventory to include:

- 1) its location and total (gross) square footage;
- 2) agency or agencies using the building (w/ square footage allocated to each);
- 3) its current replacement value (CRV) and each agencies portion; and,
- 4) whether or not the building is LRBP-eligible.

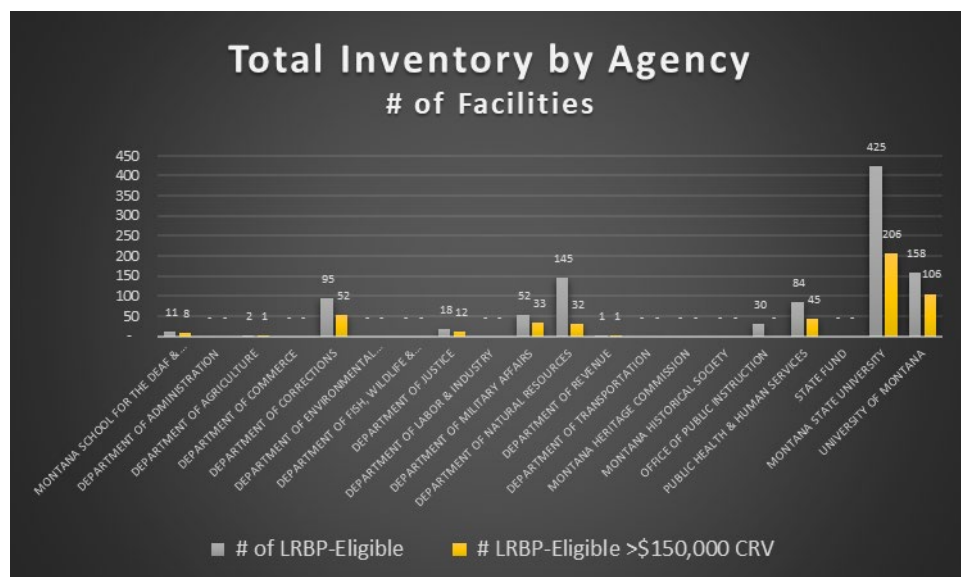

(The full inventory is provided in Appendix B)

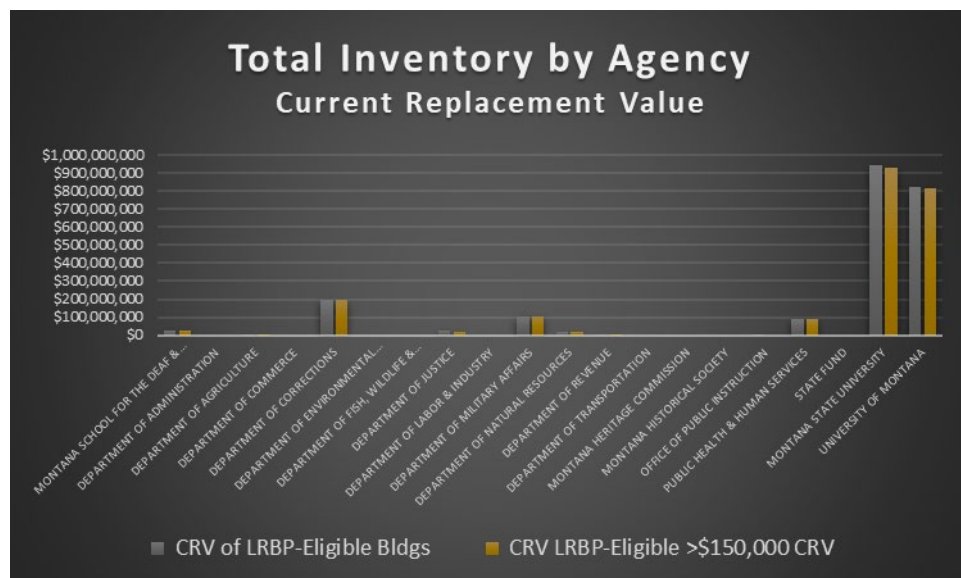

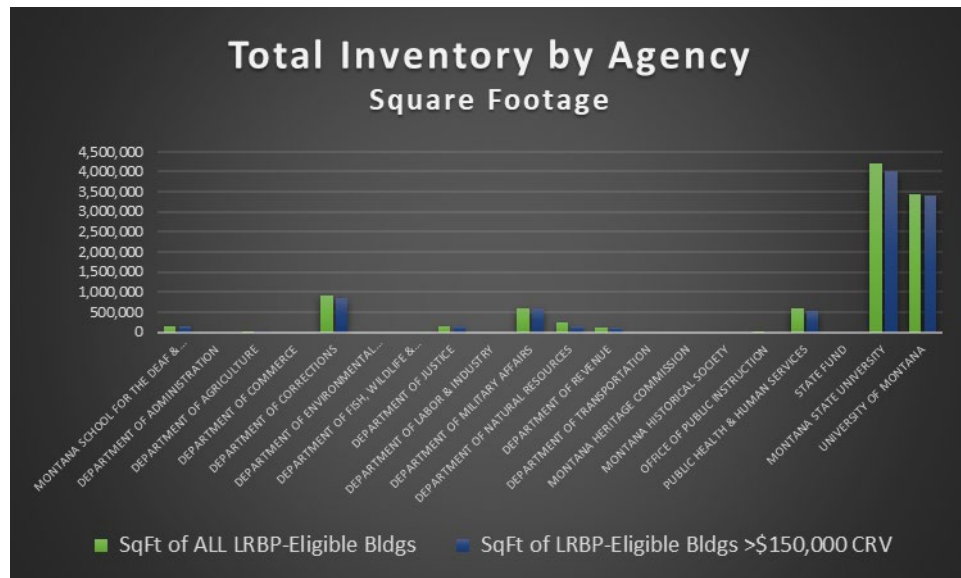

If a building is LRBP-eligible, along with the above inventory information, the following must also be included and maintained by the Department

- 1) a facility condition assessment (FCA) of the building and an itemized list of the building's deficiencies; and,
- 2) comparison of the building's current building deficiency ratio to its deficiency ratio in the previous biennium.

Current assessment information is provided in Appendix D.

## Inventory Summary & LRBP Eligibility for Assessments

## Facilities not Included in Inventory

Any State-Owned facility that is uninsured is not in the RMTD database and is not included in this inventory report. Uninsured facilities may consist of inaccuracies in the agency self-reported data or abandoned/unused/under-used buildings.

Further inventory adjustments are also anticipated as the A&E Division works with agencies to identify buildings that are not in the RMTD list but should be part of the recorded inventory. See the Action Plan portion of this report.

---

## Building Location Data Inaccuracies & Resolution Process

Given the nature of many buildings in the RMTD inventory, some do not possess a physical, postal address. These may consist of some multi-building campuses or remote facilities within the Departments of Fish, Wildlife & Parks or Transportation. For instance, some state parks buildings may be identified similarly to those at the Blackfoot/Clearwater wildlife management area: “40 miles east-northeast of Missoula on State Hwy 200.”

The A&E Division intends in the Action Plan that GIS data or latitude/longitude information be used to identify exact location of facilities. Archibus is capable of this function and can accommodate it visually using platforms such as Google Earth. The RMTD database is not able to accommodate this requirement.

## Deficiency Ratios (i.e. Facility Condition Index, FCI)

To have confidence that a deficiency ratio reliably represents any building’s overall condition, it is extremely crucial that three components in the calculation are accurate:

- Trained assessors to accurately rate/rank a deficiency of each individual element;
- Level 3 per-unit replacement cost for each deficiency of each individual element analyzed (to be provided by software through a recognized cost estimating source, such as RS Means Data); and,
- A defensible Current Replacement Value (CRV)

The overall building deficiency ratio (or FCI) can then be calculated:

$$FCI = \text{total cost of all deficiencies divided by CRV}$$

The reasons for any inaccuracy in the three components noted above are:

- 1) Untrained or unqualified assessors may subjectively rate/rank a deficiency too high or too low;
- 2) This will subsequently cause the total cost of all deficiencies to be too high or too low; and,
- 3) The CRV must be a true representation of a building’s value in today’s dollars.

Inaccuracies in any of the above will misrepresent a building’s condition as either too negative or too optimistic rather than a true representation of conditions as well as a mistaken deferred maintenance backlog.

---

## Deferred Maintenance Backlog

Deferred Maintenance is usually defined as “an amount needed but not yet expended for repairs, restoration, or rehabilitation of an asset.” Also, as the unplanned or planned decision to allow physical assets to deteriorate by postponing prudent, major repairs until funding and a replacement schedule are determined.

While it is possible to provide an itemized listing of Level 3 deficiencies once assessments have been conducted, it is not possible to provide the total deferred maintenance backlog of the LRBP-eligible inventory or any individual building without accurate unit cost resources.

The A&E Division is unable to provide a full statewide deferred maintenance backlog until such time as Archibus has been fully implemented and accurate unit cost data is available, assessment teams are trained and in-place, and one full cycle of all buildings inspections has been assessed. See the Action Plan portion of this report for a listing of options.

## List of Assessed & Unassessed Buildings by Agency

Prior assessments using the MSU methodology are available in the appendix of this report for portions of the Montana University System and the Capitol Complex.

However, these assessments are able to show only ratios or percentages deficient in the categories of the MSU format and should not be relied upon for replacement or renewal cost backlog information. This is because it consists of an invalid backlog costing data base (i.e. the cost support module is obsolete).

The lone exception is the Department of Military Affairs (DMA) who is mandated by the federal Department of Defense to use the Corps of Engineers’ “Builder” platform. DMA uses federally contracted vendor services to conduct the assessments. DMA indicates that all of the 35 State-Owned, LRBP-eligible facilities have been included in the Builder assessments performed to date (with the exception of two that will be disposed of in the near future).

## Application of the Definitions in §17-7-201(4) MCA

For many biennia, the legislature has adopted the well-conceived method of appropriating a portion of LRBP funding in a lump-sum manner under the title of “Life Safety, Code, Deferred Maintenance – Statewide.” This has allowed the A&E Division to rapidly adjust projects to address critical facility issues as they arise.

HB 553 of the 66<sup>th</sup> legislature adjusted this method of LRBP funding and separated it into two processes:

- The Major Repair LRBP account, 17-7-221

- 
- For renovations, alterations, replacement, or repair project less than \$2.5M or a new facility less than \$250,000;
  - Projects must be prioritized by the A&E Division and submitted to the Governor by November 15<sup>th</sup>; and,
  - This Facility Condition Assessment Report forms a portion of the project prioritization.
  - A Capital Developments LRB account, 17-7-209
    - For renovation, construction, alteration, site, or utility project greater than \$2.5M or a new facility greater than \$250,000;
    - The Major Repair LRB account must be fully funded per 17-7-222 prior to appropriating any Capital Development projects.

The definition of an LRB-Eligible building established in the 65th session is proving to be problematic as it affects the use of Major Repair LRB funds on the Capitol Complex.

The Department of Administration, General Services Division's operations and maintenance budget is identified as a proprietary fund comprised of rent payments from agencies who occupy space on the Capitol complex. Though this rent is established in a rate structure approved by the legislature and regularly contains general fund dollars, the fact that it becomes a proprietary fund through rent payments appears to eliminate the ability to use Major Repair LRB funds to respond to projects on the Capitol complex (including the Capitol itself). It is believed this is an unintended consequence of the definition of LRB-eligible building established in 2017.

It is recommended consideration be given to modifying the definition in §17-7-201(4) to match the intent of Senate Bill 43, which was to obtain condition assessments of buildings wherein LRB funds could previously be used (e.g. the Capitol and surrounding complex) prior to 2017.

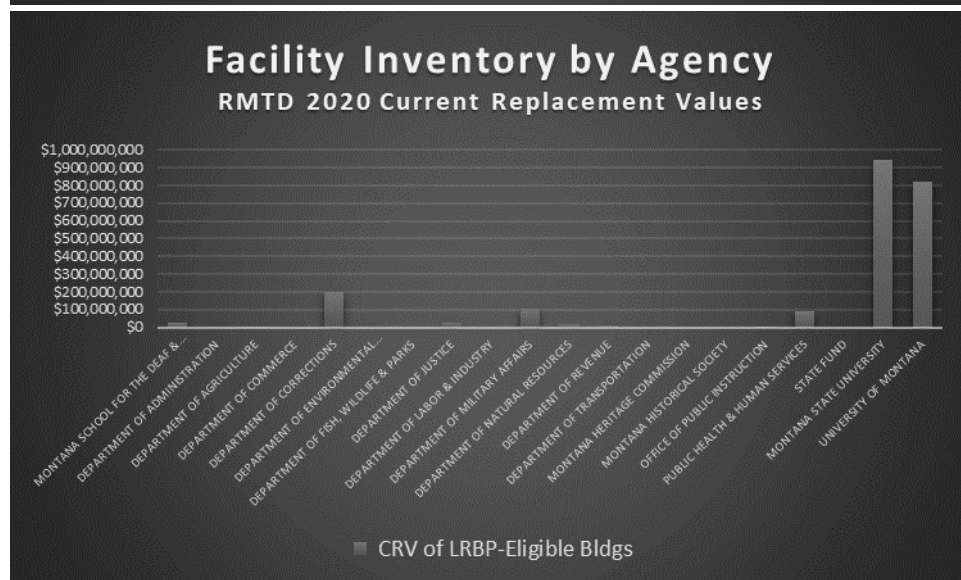

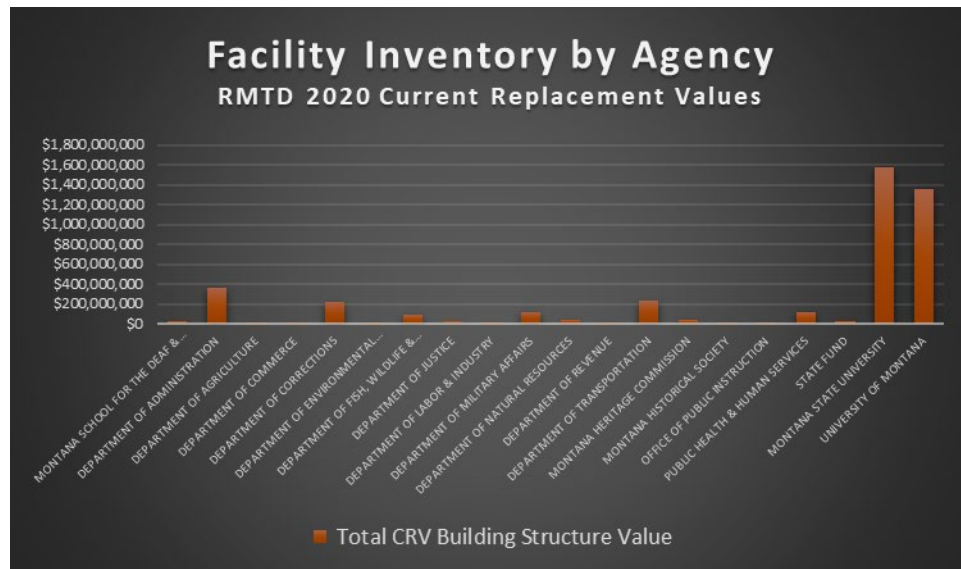

## Current Replacement Value (CRV)

For buildings roughly <\$1,000,000, the RMTD insured CRV is generated on a cost-per-square foot per building-type basis.

For buildings approximately >\$1,000,000, the RMTD insured CRV is generated through an appraisal process approximately once every five (5) years.

CRVs also frequently receives inflationary adjustments to the inventory portfolio.

The insurance-appraised CRV is not necessarily equivalent to a total project cost (total project cost will typically be higher). See difference between insured CRV and a project cost CRV in the appendices.

Reporting Entity	Total CRV Building Structure Value	CRV of LRBP-Eligible Bldgs	CRV LRBP-Eligible >\$150,000 CRV

## Archibus System overview and Implementation Status

We are at the forefront of establishing a State-wide Built Infrastructure Assessment (BIA) process that institutes standard processes throughout the Agencies for all built infrastructure. The ability to anticipate built infrastructure weaknesses, thereby minimizing deterioration and failure as part of daily operations, is on the horizon and will significantly change how we budget, plan, and prioritize built infrastructure requirements.

A&E Division is actively managing the State-wide implementation of the Archibus Sustainment Management System (SMS), a suite of web-based software applications developed to help leadership, facility engineers, and technicians decide when, where, and how to best maintain the State's built infrastructure.

Individual implementation plans are being developed to address the specific tasks associated with implementing each of the specific Archibus SMS component systems. The overall purpose of this plan is to coordinate all SMS efforts with the outcome being standardized processes as an integral part of day-to-day business practices resulting in accurate and consistent asset data across the State portfolio.

## Roles and Responsibilities

Roles	Responsibilities
A&E	<p>A&amp;E will provide policy and guidance and advocate for resources as appropriate. Additionally, A&amp;E will provide:</p> <ul style="list-style-type: none"> <li>• Provide Sustainment Management System program oversight</li> <li>• Integrated information technology solutions</li> </ul>

---

	<ul style="list-style-type: none"> <li>• Assist the Agencies in executing facility inventory assessments of real property assets and input data into SMS</li> <li>• Track status of program implementation &amp; compliance</li> </ul>
Agencies	<ul style="list-style-type: none"> <li>• Populate and maintain, with support and assistance of A&amp;E, SMS with complete, current, and accurate asset data needed to generate sustainment, maintenance and repair requirements for the Agency's built infrastructure</li> <li>• Incorporate ongoing built infrastructure asset data collection, validation, and management into day-to-day operations and maintenance activities</li> <li>• Assist A&amp;E with verifying/addressing SMS data issues</li> <li>• Ensure technicians accomplishing maintenance/repair work provide the needed updates to asset inventory/condition, including equipment/components, in the appropriate SMS format</li> </ul>

---

# Action Plan

## Accomplished to Date

- Archibus SMS and supporting software acquisition.
- Developed a strategic communication plan to consistently provide current and accurate information to all levels of the State enterprise to continually emphasize the purpose for SMS and to advise on developments.
- Establishment of all-agency collaborative work group for Archibus implementation, data review, analysis, scope, and strategic planning.
- Collection, initial review and migration of existing agency methodology and inventory information handling.
- Determinations to:
  - Utilize RMTD inventory information;
  - Verify inventory information through future review processes;
  - Standardize all assessments on the Unifomat II method
- Facility Assessment preliminary inspection schedule for LRBP Eligible assets.

## Explanation of CRV Increases Number of Buildings to be Assessed

As previously stated, the CRV as provided in the RMTD data is an insured replacement valuation appraisal based upon certain market assumptions (see appendices for further explanation) and will form the initial foundation for establishment of the FCA system.

In the event of a loss, this insured valuation does not impact RMTD's or the state's insurance carrier(s) from covering a project's cost. But, it is important to note that it is also not necessarily equivalent to a Project Cost Replacement Value for an entire facility nor does it represent the cost of an individual project to address any particular set of deficiencies.

## Data Structure: UNIFORMAT II, Level 3 Approach

The building community needs a classification framework to provide a consistent reference for the description, economic analysis, and management of buildings during all phases of their life cycle. This includes planning, programming, design, construction, operations, and disposal. The elemental building classification UNIFORMAT II meets these objectives. Elements are major components, common to most buildings, that usually perform a given function regardless of the design specification, construction method, or materials used. Examples of elements are foundations, exterior walls, sprinkler systems, and lighting.

UNIFORMAT II is the elemental classification proposed in this report because it was developed through an industry/government consensus process and has been widely accepted as an ASTM standard.<sup>4</sup> A

“standard” set of elements that are uniformly applied is essential to achieve the benefits of the elemental system approach. Shared databases of historical elemental costs, for example, are of little help in estimating future costs unless the user defines elements the same as the categories in the database.

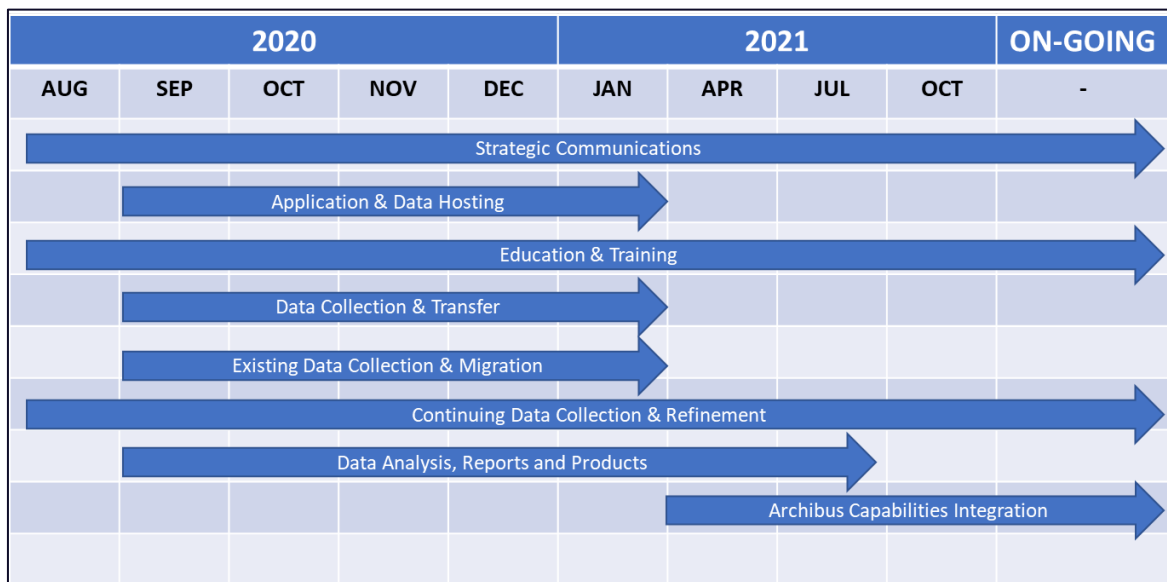

## Schedule and Milestones

Archibus SMS implementation begins now. All real property assets shall have a validated FCI by September 2021. Implementation of SMS across State assets will be an on-going effort for years to come since the various Agencies inventory assessments are at differing levels of maturity and it will take some time to fully work through the process changes.

- By Dec 2020:
  - Archibus Facilities data will be adequately populated to enable generation of infrastructure requirements to support development of the LRBP
- By Sep 2021:
  - Sustaining, managing, and refining of SMS data will be fully incorporated into daily facility maintenance and repair activities.
  - Each LRBP eligible asset in the State built infrastructure portfolio will have a facility condition index properly recorded into Archibus based on inspections conducted using the SMS standard process completed for all facilities and facility components as required by §17-7-202 MCA.

## Tasks

The following tasks outline the plan by which SMS will be implemented across the State enterprise:

---

# Conclusions and Recommendations

SMS provides State enterprise-wide asset visibility of condition and geographic data, enabling higher levels of leadership to project long-term built infrastructure requirements. A&E Division can also supplement or validate requirements models for the development of the facilities deferred maintenance budgeting process and assist in the development of projects for inclusion in the Major Repair LRBP account. The State can apply asset management principles to its real property portfolio based on current data, which is essential in a highly resource-constrained environment.

Currently, the Agencies use different methodologies (e.g., AIM, BUILDER) for assessing the condition of its assets. Disparate condition assessment systems result in an inability to accurately plan, program, and budget work for facilities. Further, it blurs the connection between asset management best practices and benefits, such as reduced workloads and project funding based on more refined future year requirements. There is an immediate need to provide guidance (i.e., a standard assessment process) to the field to achieve the mission of standardizing, collecting, analyzing, validating, and maintaining accurate vertical infrastructure data to support resource allocation and operational decisions. A&E Division is actively incorporating this guidance and expects full implementation as described in the Action Plan of this document.

Bottom-Line is that SMS represents a shift toward a proactive versus reactive asset management strategy. Instead of keeping assets operational throughout their lifecycle by relying primarily on corrective repairs, this strategy focuses on condition-based repairs, which can be planned prior to an asset's failure with the support of Archibus. This results in higher performing assets at lower lifecycle costs. When fully developed, Agencies will experience a powerful, user-friendly tool to support daily operations. In the near future, A&E Division will achieve enterprise-wide asset visibility to inform wide-scale resource allocation and strategic planning. SMS establishes a knowledge base that makes built infrastructure data more complete, consistent, reliable, and accessible.

## FACILITIES CONDITION ASSESSMENT SUMMARY REPORT

DEFICIENCY RATIOS & BUILDING CONDITION AS OF AUGUST, 2020

 **GENERAL SERVICES**

1310 East Lockey Avenue, Helena Montana, 59620 | (406) 444-3060 | [www.gsd.mt.gov](http://www.gsd.mt.gov)

## GENERAL BACKGROUND

The General Services Division team has conducted over 100 Facilities Condition Assessment (FCA) audits since 2014. Each building on our campus is assessed every three to five years. GSD manages six percent of the State's building portfolio.

GSD's FCA program is modeled after the Facility Condition Inventory application and process built by Montana State University.

GSD conducts FCA's to establish spending priorities and to track the deferred maintenance backlog for our building portfolio. This tracking effort allows us to identify where deficiencies are, report on them, target the most prudent repairs, and take care of safety issues. The FCA allows General Services to understand the physical condition that our facilities and assets are in. Condition comparisons are made by using deficiency ratios.

## DEFICIENCY RATIO

Each deficiency recorded on our audits has an associated remediation or repair cost. A deficiency ratio is found by taking the estimated cost of repair work and dividing it by the estimated cost to replace the entire building. These values are automatically calculated using MSU's FCI application.

## DEFICIENCY BACKLOG

The total dollar value of maintenance projects and repairs that are postponed due to budget constraints.

## ABOUT THIS REPORT

The following table, chart, and graphs show key building condition data collected by General Services. The team is currently in its third audit cycle.

### FCA PROGRAM DATA 4/2014-8/2020

FCA BASELINE DATA: CYCLE ONE  
DEFICIENCY RATIO BY BUILDING  
AS OF AUGUST 2018

## A COMBINATION OF CYCLE TWO AND THREE DATA (2016-2020)

### KEY TAKEAWAYS | TOTAL DEFERRED MAINTENANCE BACKLOG AS OF AUGUST 2020

The deferred maintenance backlog for the Montana capitol complex is approximately 60 million dollars, based on data from the Facility Condition Assessment (FCA) cycle one process. Cycle three is currently underway but not yet completed. The deferred maintenance consists of many life safety and critical infrastructure issues. Exterior envelope components such as roofs, skylights, windows, doors and exterior finishes have deteriorated over time due to age and are in need of replacement. Interior systems and finishes, such as Heating, Ventilation, Air Conditioning (HVAC), flooring, fire protection, central alarming, building controls and wall finishes have deteriorated to a level requiring replacement. Exterior site improvements have also been deferred for a period of time which has had catastrophic results on parking lots, drainage, and campus accessibility.
